Attention: Mr. Mike Gilbert

Dear Ms. Vandersteen and Mr. Gilbert:

Re: FortisBC Energy Inc. (FEI)
Project No. 1599246

Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)

Response to the Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates

On August 12, 2021 FEI filed the Application referenced above. In accordance with the regulatory timetable established in British Columbia Utilities Commission Order G-315-21 for the review of the Application, FEI respectfully submits the attached response to FNDCC-NRRM IR No. 1.

If further information is required, please contact the undersigned.

Sincerely,

FORTISBC ENERGY INC.

Original signed:

Diane Roy

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 1

1	Table of Contents	Page No.
2	1.0 RS1 UPC.....	1
3	2.0 Transmission Plant Cost Overrun.....	4
4	3.0 Recreation Centre District Station.....	6
5	4.0 Depreciation and Net Salvage Rates.....	8
6	5.0 DSM Forecast	11
7	6.0 FEFN 2021 Revenue Surplus Deferral Account.....	13

8

9 **1.0 RS1 UPC**

10 **Reference: Exhibit B-1, Application, pp. 92-93**

11 FEI provides its forecast for its RS1 UPC of 125.8 GJ for 2022.

- 12 1.1 Please explain why FEI believes its RS1 UPC forecast based on ten years of data
13 is appropriate. In providing your response, please discuss:
- 14 (a) the inclining UPC trend between 2018 and 2020;
 - 15 (b) FEI’s UPC underforecast for 2021; and
 - 16 (c) the effect of COVID-19 on 2021 UPC.

17

18 **Response:**

19 FEI’s demand forecast methods are consistent with the recommendations in the FEI Forecasting
20 Method Study filed as Appendix B2 in FortisBC’s 2020-2024 MRP Application. The Forecasting
21 Method Study represented the culmination of a number of years of research and testing of
22 alternative forecasting methods in response to the forecasting directives in Order G-86-15 and
23 accompanying decision related to the FEI Annual Review for 2015 Delivery Rates Application.
24 As a result of this study, FEI adopted the Exponential Smoothing (ETS) method for the purpose
25 of forecasting residential and commercial use rates, as ETS proved to be the most accurate
26 method for this purpose.

27 With regard to the inclining UPC between 2018 and 2020, FEI cannot definitively explain any
28 change in residential UPC in a given year as it is a result of many factors that may be both
29 compounding and offsetting. For example, additional conservation might reduce the load but this
30 may have been offset by an increase in the number of appliances used in a home. FEI notes that
31 the ETS method places more emphasis on the long-term trend if one is present and more
32 emphasis on recent observations where a trend is not present.

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 2

1 The UPC results for 2021 will not be available until early 2022 so it is too early to speculate on
 2 whether or not the actual 2021 UPC will be less than forecast.

3 FEI does not have sufficient data or evidence with which to make a specific adjustment to the
 4 forecast to reflect any effect from the COVID-19 pandemic. The residential demand variance
 5 shown in Table A2-3 for 2020 was 2.6 percent. FEI notes that variances in three of the prior nine
 6 years were higher while six were lower. This implies that the impact from the COVID-19 pandemic,
 7 as reflected in the 2020 demand data for FEFN, was minimal.

8 Please also refer to the responses to BCUC IR1 4.1 and 4.1.1 for further details supporting the
 9 RS 1 UPC forecast.

10
 11

12

13 1.2 Please provide the effect on delivery rates if the 2022 RS1 UPC forecast were:

14 (a) increased by 1%; and

15 (b) increased by 2%.

16

17 **Response:**

18 Please refer to the table below, which provides the impact to the proposed 2022 delivery rates if
 19 the 2022 RS 1 UPC forecast was increased by 1 percent and 2 percent. Increasing the RS 1
 20 UPC forecast by 1 percent and 2 percent will decrease the 2022 delivery rate impact from 3.41
 21 percent to 2.90 percent and 2.39 percent, respectively.

	2022 Forecast (As-Filed)	+1%	+2%
Rate Schedule 1 UPC (GJ)	125.8	127.1	128.3
Rate Schedule 1 Demand (TJ)	234	236	238
Rate Schedule 2 Demand (TJ) - No Change	150	150	150
Rate Schedule 3 Demand (TJ) - No Change	87	87	87
Total Volumes TJs	471.2	473.5	475.9
Delivery Margin @ Existing Rate (\$000s)	2,434	2,446	2,458
Delivery Margin Required (\$000s)	2,517	2,517	2,517
Deficiency/(Surplus) (\$000s)	83	71	59
Delivery Rate Increase (%)	3.41%	2.90%	2.39%

22

23 FEI does not have any evidence to support the alternative residential UPC forecast suggested by
 24 this information request. FEI's UPC forecasts were developed based on a methodology used and
 25 approved in the past as described in Section 8.3.2 of the Application. FEI also notes that any

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 3

- 1 variance in UPC between actual and forecast is captured in the Revenue Stabilization Adjustment
- 2 Mechanism (RSAM) deferral account, which will be recovered from or returned to customers over
- 3 a two-year period starting the following year.

- 4

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 4

1 **2.0 Transmission Plant Cost Overrun**

2 **Reference: Exhibit B-1, Application, p. 107**

3 FEI indicates:

4 FEI notes the 2021 Projected capital additions have increased from 2021 Approved by
5 approximately \$142 thousand. The increase is primarily due to additional consulting costs
6 for engineering and design as well as a change in scope of work to include additional
7 hydrovax services for safe excavation and additional fencing for the site work. The
8 additional consulting costs and scope of work were not anticipated when the 2021
9 Approved amount was developed.

10 2.1 Please explain:

- 11 (a) what additional consulting costs for engineering and design were required;
12 and
13 (b) why the change in scope of work to include hydrovax services and
14 additional fencing was required.

15
16 **Response:**

17 The additional consulting costs for engineering and design and change in scope of work are due
18 to an issue identified during detailed design, as described below, and a requirement to utilize third
19 party contractors/consultants due to unavailability of FEI's internal engineering.

20 During detailed design of the replacement piping, it was determined that a short section of pipe
21 on the upstream/inlet side of the station had not been tested sufficiently for the planned future
22 operating conditions. As a result, the project plan now includes removal of fencing to make room
23 for excavation of the piping using hydrovax services, which will allow FEI to perform cut-out and
24 pressure testing of the short upstream section of pipe, reinstallation of the section of pipe, and
25 reinstallation of the fencing.

26
27

28
29 2.2 Please explain why these costs and scope of work were not anticipated when the
30 2021 Approved amount was developed.

31
32 **Response:**

33 When the 2021 Approved amount was developed in mid-2020, it was based on a preliminary level
34 of design accuracy for the purposes of planning, budgeting and application. The issue as
35 described in the response to FNDCC-NRRM IR1 2.1 was not identified until the project was
36 advanced to the level of detailed engineering and design for the purposes of execution, which

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 5

1 occurred after the 2021 Approved amount was developed. Since the change of scope and the
2 resulting increase in project costs were identified after the 2021 Approved amount was developed,
3 FEI included the updated project costs in the current Application.

4
5

6
7 2.3 Please explain what costs could have been avoided or reduced had the additional
8 scope described been identified prior to developing the 2021 Approved amount.

9

10 **Response:**

11 No costs would have been avoided or reduced had the change of scope as described in the
12 response to FNDCC-NRRM IR1 2.1 been identified prior to developing the 2021 Approved
13 amount. If FEI identified the change of scope prior to the development of the 2021 Approved
14 amount, then the additional costs would have been included as part of the estimate for the 2021
15 Approved amount.

16

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 6

1 **3.0 Recreation Centre District Station**

2 **Reference: Exhibit B-1, Application, pp. 108-109**
3 **Decision and Order G-78-21, p. 9**

4 With respect to the Recreation Centre District Station, FEI indicates:

5 As the City of Fort Nelson has advised that it is willing to create a formal land
6 agreement for the existing site, this will allow FEFN to upgrade the existing station
7 rather than installing a new station elsewhere. As directed in Order G-78-21, FEI
8 provides the current scope, timing and capital additions for this project in Table 8-
9 13 below. Due to the original uncertainty regarding the location of the station, FEI
10 was delayed in commencing the project; thus, the \$103 thousand forecast to be
11 spent in 2021 as part of the FEFN 2021 Deferral Account Application is now
12 forecast to be spent in 2022. FEI expects the construction of the project to be
13 completed in 2022, with some minor expenditures related to site clean up occurring
14 in 2023.

15 In Decision and Order G-78-21, the Commission noted that this project “is planned to be
16 completed by the end of 2023” (p. 9).

17 3.1 Please confirm that the reference to the City of Fort Nelson in the reference above
18 is to the Northern Rockies Regional Municipality. If not confirmed, please explain
19 your response.

20
21 **Response:**

22 Confirmed. The preamble mistakenly referred to the Northern Rockies Regional Municipality as
23 the City of Fort Nelson.

24
25

26
27 3.2 Please confirm that FEI does not yet have a formal land agreement for the existing
28 site. If not confirmed, please fully explain your response.

29
30 **Response:**

31 FEI clarifies that the formal land agreement referenced in the preamble is referring to the new
32 Statutory Right of Way (SRW) required for the upgrade to the existing station. The new SRW is
33 approximately 20 percent of FEI’s fenced area for the station. FEI currently has not yet attained
34 the SRW. At a meeting in October 2020, a representative of the Northern Rockies Regional
35 Municipality verbally agreed to issue the new SRW for the existing site. FEI completed a legal
36 survey in November 2021 and submitted the reference plan as well as ROW terms to the Northern
37 Rockies Regional Municipality for review on December 1, 2021. FEI expects that an agreement

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 7

1 could be completed in the first quarter of 2022. As FEI currently plans for construction to begin
2 in the early summer of 2022, FEI does not expect the timing of the formal land agreement will
3 affect the timeline for this project's completion.

4
5

6
7 3.3 Please confirm that the timing of entering into any formal land agreement will affect
8 the timeline for this project's completion.

9

10 **Response:**

11 Please refer to the response to FNDCC-NRRM IR1 3.2.

12
13

14
15 3.4 Please explain why FEI's completion forecast has changed from the 2023 date
16 identified in Decision and Order G-78-21 and the 2022 date in the Application.

17

18 **Response:**

19 FEI clarifies that there has been no change to the completion date of 2023. FEI notes the
20 complete sentence on page 9 of the Decision and Order G-78-21 as referenced in the preamble
21 above is:

22 "The project is planned to be completed by the end of 2023, with construction and
23 installation planned for 2022."

24 As stated in the current Application, FEI expects the construction of the project to be complete in
25 2022, with some minor expenditures related to site clean-up occurring in 2023; thus, the project
26 is still expected to complete in 2023. Construction completion does not necessarily equate to
27 project completion, as there is still work required for clean-up and project closing.

28

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 8

1 **4.0 Depreciation and Net Salvage Rates**

2 **Reference: Exhibit B-1, Application, p. 32, and p. 110, s. 8.6.2.3 FortisBC MRP**
3 **2020-2024 Decision, pp. 134, 136**

4 FEI suggests:

5 Consistent with past FEFN RRAs, FEFN adopts FEI’s changes to depreciation and
6 net salvage rates. FEI’s most recent depreciation study was completed in 2017 and
7 was approved as part of the MRP Decision and Order G-165-20. FEI is seeking
8 approval in this Application to adopt the depreciation and net salvage rates from
9 FEI’s most recent depreciation study. FEFN’s assets were included with FEI’s
10 assets in the data used to prepare the depreciation study, as such, the
11 recommended depreciation and net salvage rates are applicable to FEFN.

12 In the MRP proceeding, FEI suggested that “the updated depreciation rates should be
13 approved as they properly reflect the useful lives of its assets and result in a fair allocation
14 and recovery of depreciation expense between current and future ratepayers” (p. 134).

15 In the MRP proceeding, the Commission Panel noted that (p. 136):

16 ...the largest impact from the depreciation studies is an increase in Net Salvage
17 for both FEI and FBC. The Panel acknowledges that these estimates rely on a
18 considerable amount of professional judgment by both Concentric and FortisBC.
19 Significant variances between estimated and actual Net Salvage could result in
20 rates that either over or under collect future removal costs prior to actual costs
21 being incurred and there is some risk of intergenerational inequity. However, in the
22 Panel’s view this risk can be mitigated through regular updates to the depreciation
23 studies.

24 The Commission directed “FortisBC to update the depreciation studies for FEI and FBC
25 prior to or along with its next RRA following the Proposed MRPs” (p. 136).

26 FNDCC and NRRM seek to better understand the applicability of FEI’s most recent
27 depreciation study to the assets in FEFN’s service area.

28 4.1 Please explain whether the depreciation rates proposed in the Application reflect
29 the useful life of the assets in the FEFN service area. In providing your response,
30 please explain what impact FEI’s recent capital build in the FEFN service area (as
31 set out at p. 32 of the Application) has on the assumption that the proposed
32 depreciation rates reflect the useful lives of these assets.

33
34 **Response:**

35 The depreciation rates proposed in the Application are based on FEI’s approved depreciation
36 rates and provide a reasonable representation of the useful life of the assets in the FEFN service

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 9

1 area, as the nature and the useful life of FEFN's assets are similar to the useful life of FEI's assets,
2 with FEFN's operating assets subject to the same operating and maintenance standards as FEI's.
3 FEFN's assets were included with FEI's assets in the data used to prepare the depreciation study
4 and, as such, the recommended depreciation and net salvage rates are applicable to FEFN.

5 The recent capital build in the FEFN service area (as set out on page 32 of the Application) has
6 not materially impacted the proposed depreciation rates of the affected assets (i.e., Transmission
7 Pipeline) or the assumption that the proposed depreciation rates reflect the useful lives of these
8 assets. As outlined on page 32, the Fort Nelson Lateral - Muskwa River Crossing CPCN was the
9 most significant sustainment capital project in recent years, which added approximately \$4 million
10 of Transmission assets to FEFN's gross plant in service in 2015. The annual depreciation rate
11 proposed for FEFN Transmission Mains (BCUC Account 465-00) based on the recently approved
12 FEI Depreciation Study is 1.46 percent,¹ consistent with an estimated average service of 65 years
13 as outlined in the 2017 FEI Depreciation Study². This average life of approximately 65 years is
14 also consistent with that observed in the industry. Concentric, in its recent review of the
15 Transmission Asset account for FEI, noted that "Concentric reviewed a selection of peer
16 Canadian natural gas transmission companies. Average service life estimates among these
17 peers ranged from 60 years through 65 years".³ There is no reason to believe that the useful lives
18 of Fort Nelson's Transmission assets would be any different than FEI or the natural gas
19 transmission industry.

20 Further, Transmission assets comprise a substantial portion of the total gross plant and therefore
21 influence the overall depreciation rate and expense for FEFN. Of the total estimated 2022 FEFN
22 Gross Plant for Depreciation of \$18 million outlined on Schedule 5 in Appendix E-1, a substantial
23 portion is for Transmission Plant at approximately \$7 million. Of the remainder of the 2022 FEFN
24 Gross Plant for Depreciation, \$10 million is for Distribution Plant and \$1 million is for General
25 Plant and Equipment and Intangible Plant.

26 Adopting FEI's depreciation rates for FEFN simplifies the administration of the depreciation rates
27 by eliminating the need to perform a separate study specifically for FEFN with associated
28 incremental costs to develop a separate study, which would then be subject to review and
29 approval by the BCUC. A new depreciation study is typically completed once every 3 to 5 years
30 and a separate study for FEFN would result in incremental costs, including the costs to prepare
31 the study and the costs of the regulatory process to review the study. All of these costs would be
32 allocated entirely to the customers in Fort Nelson each time a depreciation study is undertaken.

33 For the above reasons, and even when considering the recent FEFN capital build, FEI's approved
34 depreciation rates continue to be appropriate to use for FEFN's depreciation rates.

¹ Appendix E-1 of the Application, Schedule 5, Line 10.

² Page 5-2, 465-00 Transmission Pipeline Iowa 65-R4 indicates that the average service life assigned to Transmission Mains is 65 years.

³ Pages 3-6 and 3-7, FEI 2014 Depreciation Study.

4.2 Please explain whether the net salvage rates proposed in the Application reflect FEI’s experiences for its assets in the FEFN service area. In providing your response, please explain what impact FEI’s recent capital build in the FEFN service area (as set out at p. 32 of the Application) has on any assumptions regarding the proposed net salvage rates.

Response:

The FEFN net salvage rates proposed in the Application, based on FEI’s approved net salvage rates, provide a reasonable representation of net salvage (removal costs less salvage proceeds) on FEFN’s assets as a cost of providing service, to be recovered from customers over the useful life of the assets. FEFN’s assets were included with FEI’s assets in the data used to prepare the depreciation study and, as such, the recommended depreciation and net salvage rates are applicable to FEFN.

Please refer to the response to FNDCC-NRRM IR1 4.1 as the explanation and rationale provided for FEFN’s proposed depreciation rates also applies to FEFN’s proposed net salvage rates. As discussed in the response to FNDCC-NRRM IR1 4.1, the recent FEFN capital build was primarily related to the Fort Nelson Lateral - Muskwa River Crossing CPCN. Since this is a relatively new asset with no retirement history, there is insufficient information to suggest that the estimated net salvage costs would be any different than that observed for FEI’s Transmission pipeline assets.

4.3 Please provide any updates to FEI’s 2017 depreciation study that are available in draft or final form.

Response:

There have been no updates to FEI’s 2017 Depreciation Study, which was approved by BCUC Order G-165-20 as part of FEI’s 2020-2024 MRP Application.

For clarity, FEI’s MRP is currently effective from 2020 through 2024; therefore, the BCUC directive to update the depreciation studies referenced in the preamble to this information request is referring to the RRA following the end of the current MRP term, which is anticipated to occur in 2025.

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 11

1 **5.0 DSM Forecast**

2 **Reference: Exhibit B-1, Application, p. 111**

3 In Table 8-14, FEI provides its Deferral Balances included in Rate Base. FEI over-forecast
4 its Demand-Side Management (DSM) account in both 2020 and 2021. FEI nonetheless
5 forecasts a roughly 30% increase for 2022 over its projected 2021 amount of \$319,000.

6 5.1 Please explain how this DSM forecast was developed.

7

8 **Response:**

9 The 2022 mid-year forecast balance of the FEFN DSM deferral account shown in Table 8-14 was
10 developed based on an allocation of FEI's total DSM expenditures, which includes the current
11 year (i.e., 2022) rate base additions of \$30 million, and a transfer of the prior year (i.e., 2021)
12 ending balance of the non-rate base DSM deferral account of \$98 thousand. The allocation factor
13 was based on the percentage of FEFN customers compared to the total FEFN and FEI customers,
14 which is 0.216 percent for 2022 as shown in Table 8-7 of the Application. FEI notes the rate base
15 DSM deferral account for FEFN was first established in 2012 with FEFN adopting FEI's rate base
16 and non-rate base treatment of the DSM deferral account in 2019 as approved by BCUC Order
17 G-48-19.

18 The increase in the mid-year forecast 2022 balance of the FEFN DSM rate base deferral account
19 from 2021 Projected is primarily due to the approved year-to-year increase in FEI's DSM
20 expenditures under FEI's current 2019-2022 DSM Plan as approved by BCUC Order G-10-19.

21 Regarding the variance in 2020 and that projected for 2021, since the forecasts are developed
22 using the methodology set out above, the actual DSM expenditures for Fort Nelson customers
23 will vary from that forecast depending on the uptake of the various programs. Only actual amounts
24 will be recovered from Fort Nelson customers once those amounts are known.

25

26

27

28 5.2 Please discuss the ratepayer impact of any over-forecasting for this account. As
29 part of your response, please discuss any impact on FEFN's ratepayers if this
30 account is over- forecast in 2022 and FEI were to implement its common rates
31 proposal in 2023.

32

33 **Response:**

34 Consistent with all other components of FEFN's rate base that are subject to forecast risk , there
35 could be a small impact to FEFN's ratepayers due to any under- or over-forecast in 2022, related
36 to the earned return component of the revenue requirement only. Given the fact that past delivery
37 rates cannot be retroactively reset based on actuals, customers will pay for the forecast earned

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 12

1 return included in the current delivery rates. However, the deferral balances of FEFN are subject
2 to re-basing with actuals in each revenue requirement; therefore, any impact (positive or negative)
3 from the forecast variances in earned return is expected to be small and only temporary in nature.
4 The amortization of the rate base DSM deferral account includes a true-up of prior years' under-
5 or over-forecast of DSM expenditures. As such, customers only pay for actual DSM expenditures
6 through the amortization of the deferral account into delivery rates over time.

7 FEI notes that since delivery rates are being set for FEFN on a standalone basis for 2022, this
8 negligible and temporary impact would occur regardless of whether common rates are approved
9 or not (since common rates are proposed to be implemented in 2023).

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 13

1 **6.0 FEFN 2021 Revenue Surplus Deferral Account**

2 **Reference: Exhibit B-1, Application, p. 114, s. 8.6.4.2 Exhibit B-1, Application, p.**
3 **59, Table 5-17 Decision and Order G-78-21, p. 8**

4 FEI proposes to refund the FEFN 2021 Revenue Surplus Deferral Account to mitigate rate
5 impacts from the proposed move to common rates: “As explained in Section 7.1.4.4, FEI
6 proposes to utilize the FEFN 2021 Revenue Surplus deferral account in the
7 implementation of the Proposed Common Rate Option in 2023 to mitigate the rate impact
8 for residential FEFN customers of moving to common rates.”

9 Table 5-17 illustrates that FEI intends to refund these amounts over a ten year period
10 following its proposed move to common rates.

11 In its 2021 Deferral Account Application, FEI suggested that its deferral treatment for this
12 account was preferable because it “[b]enefits FEFN customers in the near future resulting
13 in low intergenerational inequity”.

14 6.1 Please explain why FEFN’s ratepayers should not be refunded this revenue
15 surplus as soon as possible (in the near future) rather than over ten years as FEI
16 proposes. In particular, please explain why the refund of this revenue surplus be
17 delayed until a determination is made on FEI’s common rates application.
18

19 **Response:**

20 Please refer to the response to BCUC IR1 10.1 which explains the advantages of delaying the
21 return of the 2021 revenue surplus to 2023 instead of returning the surplus as soon as possible
22 (i.e., in 2022) under the scenario where common rates are not approved as well as under the
23 scenario where common rates are approved.

24 In the response to BCUC IR1 10.1, FEI also explains that if common rates are approved, FEI’s
25 proposal is to include the 2021 revenue surplus as part of the FEFN residential 10-year phase-in
26 credit rider to reduce the initial bill impact to FEFN’s residential customers. If the 2021 revenue
27 surplus were returned to FEFN’s customers immediately in 2023 instead of over a 10-year period,
28 then FEFN’s residential customers would see a larger credit (i.e., a larger reduction to the initial
29 bill impact of moving to common rates) in 2023; however, FEFN’s residential customers would
30 experience a larger increase in the following year when the credit associated with the 2021
31 revenue surplus is eliminated. By phasing in the 2021 revenue surplus over a 10-year period as
32 part of the phase-in credit rider, the bill impact experienced by FEFN’s residential customers will
33 be more gradual.

34 However, FEI is not opposed to returning the entire revenue surplus to FEFN’s customers in 2023
35 instead of over a 10-year period as part of the move to common rates if such an approach were
36 directed by the BCUC.

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 14

1
2 6.2 Please explain why FEI’s proposed treatment of this deferral account is inter-
3 generationally equitable. In providing your response, please explain the impact of
4 FEI’s forecast of a declining customer base in the FEFN service area on any
5 inequity that may occur.

6
7 **Response:**

8 If common rates for FEFN are not approved, FEI will seek approval for disposition of the balance
9 of the 2021 Revenue Surplus deferral account in the 2023 RRA (to be filed in 2022) with credit
10 amortization into FEFN’s delivery rates starting in 2023. Given there is only a one year difference
11 between 2022 and 2023, FEI does not believe this creates an issue of intergenerational inequity.
12 Also, as discussed in the response to BCUC IR1 10.1, FEI is expecting a higher delivery rate
13 impact in 2023 than in 2022 if common rates are not approved, therefore, it would be more
14 beneficial to utilize the 2021 revenue surplus to mitigate the expected higher delivery rate increase
15 in 2023.

16 If common rates for FEFN are approved, as described in Section 5.5 of the Application, FEI
17 proposes to apply the 2021 revenue surplus to the 10-year phase-in credit rider for FEFN’s
18 residential customers in order to further reduce the annual bill impact that FEFN’s residential
19 customers will experienced due to common rates. While this might create some intergenerational
20 inequity, FEI must balance the benefits of a longer amortization period with the potential for some
21 intergenerational inequity. Further, returning the revenue surplus over a 10-year period as part
22 of the common rate phase-in credit rate rider will cause only minimal intergenerational inequity,
23 even if FEFN’s customer base continues to decline. Using the forecasting methods as described
24 in Section 8.3.2 of the Application, FEI forecasts the FEFN residential customer count in 2032
25 would only decline to approximately 95 percent of the 2022 level. In other words, the majority of
26 FEFN’s residential customers today will still benefit from the 2021 revenue surplus through the
27 proposed 10-year phase-in credit rate rider. Furthermore, as discussed in the response to BCUC
28 IR1 10.1, it would be more beneficial to use the 2021 revenue surplus to mitigate the expected
29 higher bill impact for FEFN’s residential customers due to the move to common rates (if approved)
30 in 2023 rather than to mitigate the relatively smaller impact of the forecast 2022 delivery rate
31 increase.

32
33
34 6.3 Please explain why FEI’s proposed treatment of this deferral account is equitable
35 as between rate classes.

36
37

FortisBC Energy Inc. (FEI or the Company) Application for Common Rates and 2022 Revenue Requirements for the Fort Nelson Service Area (Application)	Submission Date: December 9, 2021
Response to Fort Nelson & District Chamber of Commerce (FNDCC) and Northern Rockies Regional Municipality (NRRM) Information Request (IR) No. 1 on 2022 Delivery Rates	Page 15

1 **Response:**

2 If common rates for FEFN are approved, only FEFN’s residential customers will see an increase
3 in their bills in 2023 while commercial customers will see a savings. Given the savings already
4 available for the commercial customers due to common rates (i.e., for the average RS 2 small
5 and RS 3 large commercial customer, the forecast savings in 2023 would be \$350 and \$3,327
6 per year, respectively), FEI believes it is equitable to prioritize minimizing the impact to FEFN’s
7 residential customers by using the 2021 revenue surplus on FEFN’s residential customers rather
8 than allocating the 2021 revenue surplus to all rate classes. Applying the revenue surplus to all
9 customer classes would result in even greater savings for FEFN’s commercial customers due to
10 common rates but would result in a higher negative impact to FEFN’s residential customers.

11 However, FEI is not opposed to applying the revenue surplus to all customer classes as part of
12 the move to common rates if such an approach is directed by the BCUC.
