British Columbia Utilities Commission
Suite 410, 900 Howe Street
Vancouver, BC
V6Z 2N3

Attention: Patrick Wruck, Commission Secretary

Dear Patrick Wruck:

Re: FortisBC Energy Inc. (FEI)
Multi-Year Rate Plan for 2020 through 2024 approved by British Columbia
Utilities Commission (BCUC) Order G-165-20 (MRP Plan)
Annual Review for 2024 Delivery Rates

In accordance with the MRP Plan and BCUC Order G-194-23 setting out the Regulatory Timetable for FEI's Annual Review, FEI hereby attaches its Annual Review for 2024 Delivery Rates Application materials.

If further information is required, please contact the undersigned.

Sincerely,

FORTISBC ENERGY INC.

1. APPROVALS SOUGHT, OVERVIEW OF THE APPLICATION AND PROPOSED PROCESS

1.1 INTRODUCTION

FortisBC Energy Inc. (FEI or the Company) files this Application in compliance with British Columbia Utilities Commission (BCUC) Order G-165-20, which approved a Multi-Year Rate Plan (MRP or the Plan) for FEI for the years 2020 to 2024. In accordance with the MRP, an annual review process is required to set rates for each year of the MRP.

The MRP provides stable levels of O&M funding, the flexibility to innovate and adapt, and incentive to invest in the future, while maintaining service quality. The approved Earnings Sharing Mechanism (ESM), set out in Section 10, aligns the incentive properties of the Plan between customers and the Company.

As explained in Section 10.2 of the Application, FEI proposes to distribute \$6.989 million¹ in earnings sharing to customers in 2024.

The proposed delivery rates for 2024 flowing from the approved formulas and forecasts set out in the Application, including returning the actual 2022 earnings sharing to customers, result in a 4.50 percent delivery rate increase from 2023 delivery rates. After consideration of the delivery rate riders, the annual bill impact is an increase of approximately \$45.18 or 4.21 percent for a residential customer.² The increase is primarily due to higher income tax expense, amortization of FEI's deferral accounts, and formula-driven O&M expenses, partially offset by increases in revenue due to growth in customers and volume, and reduced earned return due to a reduction in FEI's rate base. These drivers are further explained in Section 1.5.

In the subsections below, FEI sets out the approvals it is seeking and provides an overview of the requirements for the annual review process. This is followed by a discussion of FEI's 2022 formula O&M savings and the productivity initiatives that FEI is developing. Finally, FEI provides a summary of its proposed revenue requirements and rate changes for 2024 and a summary of the SQI results. These matters are addressed in more detail in subsequent sections of the Application.

1.2 APPROVALS SOUGHT

With this Application, FEI requests BCUC approval for the following pursuant to sections 59 to 61 of the *Utilities Commission Act* (UCA):

1. Approval to recover the 2024 revenue requirement and resultant delivery rate change on a permanent basis, effective January 1, 2024, as filed in the Application and subject to

¹ This amount is pre-tax and includes financing accrued on the MRP Earnings Sharing deferral account.

² Average residential customer with consumption of 90 GJ per year. Annual bill impact before BVA rate rider and RSAM rate rider is \$31.50 or 2.93 percent.

- 1 any adjustments identified by FEI during the regulatory process and from any directives
2 or determinations made by the BCUC in its decision on the Application.
- 3 2. The following deferral account approvals as described in Section 7.5:
- 4 • Creation of rate base deferral accounts for the following regulatory proceedings:
- 5 ○ 2025 Multi-year Rate Plant (MRP) Application, with the amortization period to be
6 determined in a future proceeding;
- 7 ○ 2023 Cost of Service Allocation (COSA) Study, with the amortization period to be
8 determined in a future proceeding;
- 9 ○ 2024-2027 Demand Side Management (DSM) Expenditure Plan Application, with
10 amortization over a four-year period commencing January 1, 2024; and
- 11 ○ PST Rebate on Select Machinery and Equipment, with amortization over a one-
12 year period commencing January 1, 2024.
- 13 • Approval of a one-year amortization period for the existing Transportation Service
14 Report deferral account, commencing January 1, 2024.
- 15 3. A Biomethane Variance Account (BVA) Rate Rider for 2024 in the amount of \$0.181 per
16 gigajoule (GJ) as calculated in Section 10.3.1.2.
- 17 4. Revenue Stabilization Adjustment Mechanism (RSAM) riders for 2024 in the credit
18 amount of \$0.106 per GJ as set out in Table 10-5 in Section 10.3.2.
- 19 5. Fort Nelson Residential Customer Common Rate Phase-in Rate Rider for 2024 in the
20 amount of \$0.863 per GJ as calculated in Section 10.3.3.
- 21 6. The 2024 Core Market Administration Expense (CMAE) budget of \$6.050 million, as set
22 out in Appendix B, and the allocation of the CMAE between FEI's Commodity Cost
23 Reconciliation Account (CCRA) and Midstream Cost Reconciliation Account (MCRA)
24 based on the allocation percentages of 30 percent and 70 percent, respectively.
- 25 A draft order is included in Appendix E.

26 **1.3 REQUIREMENTS FOR THE ANNUAL REVIEW**

27 On page 167 of the MRP Decision, the BCUC set out its expectations for the Annual Review
28 component of the MRP. For reference, the table below sets out each requirement and FEI's
29 response or where it is addressed in the Application.

1

Table 1-1: Annual Review Requirements

Item	Description	Response or Reference
1	Review of the current year projections and the upcoming year's forecast. For further clarity, these items are listed below:	See items 1(a) to 1(f) below
1(a)	Customer growth, volumes and revenues;	Section 3
1(b)	Year-end and average customers, and other cost driver information including inflation;	Section 2
1(c)	Expenses, determined by the indexing formula plus items forecast annually;	Section 6
1(d)	Capital expenditures (as provided for by the capital forecast with FEI's Growth capital determined by the indexing formula), plus other items forecast annually;	Section 7
1(e)	Plant balances, deferral account balances and other rate base information and depreciation and amortization to be included in rates; and	Sections 7 and 12
1(f)	Projected earnings sharing for the current year and true-up to actual earnings sharing for the prior year.	Section 10.2
2	Identification of any efficiency initiatives that the Utilities have undertaken, or intend to undertake, that require a payback period extending beyond the MRP period with recommendations to the BCUC with respect to the treatment of such initiatives.	FEI has not identified any efficiency initiatives with a payback beyond the end of the MRP period
3	Review of any exogenous events that the Company or stakeholders have identified that should be put forward to the BCUC for review.	Section 12.2
4	Review of the Utilities' performance with respect to SQIs. Bring forward recommendations to the BCUC where there have been a "sustained serious degradation" of service.	Section 13
5	Assess and make recommendations with respect to any SQIs that should be reviewed in future Annual Reviews.	FEI does not have any recommendations at this time
6	Reporting on the Innovation Fund status.	Section 10.3.4
7	Assess and make recommendations to the BCUC on potential issues or topics for future Annual Reviews.	FEI does not have any recommendations at this time

2 **1.4 FORMULA O&M SAVINGS AND PRODUCTIVITY INITIATIVES**

3 **1.4.1 Overview of 2022 Formula O&M Savings**

4 For 2022, FEI achieved formula O&M savings in addition to meeting the embedded productivity
 5 improvement factor in the O&M formula. Total formula O&M savings before earnings sharing
 6 were approximately \$7.3 million, excluding the COVID-19 pandemic approved exogenous factor
 7 credit for net O&M cost reductions of approximately \$3.9 million.

1 Of the approximate \$7.3 million in formula O&M savings realized in 2022, approximately \$2
2 million are due to savings achieved as the result of productivity initiatives, including the
3 Willingdon Park Redesign, Paperless Billing Customer Campaigns, and Operational Field
4 Excellence³, which were described in the Annual Review for 2023 Delivery Rates. Additionally,
5 approximately \$3 million of the overall O&M savings are due to estimated general overall labour
6 savings. The remaining savings are the result of various factors, including: \$0.3 million in lower
7 spending compared to the formula amount for incremental expenditures related to System
8 Operations, Integrity and Security (refer to Section 6.2.1 for further details); \$0.4 million of lower
9 employee expenses, \$0.5 million of lower spending on Connect to Gas rebates due to lower
10 customer participation; and savings due to general timing of expenditures. While some of the
11 savings are one-time in nature (e.g., required time to fill vacancies from turnover), some of the
12 savings are expected to continue into the future, recognizing that cost pressures in the future
13 may offset the savings.

14 FEI will continue to pursue productivity improvements to achieve savings beyond the
15 productivity improvement factor as it seeks to manage its business needs and cost pressures
16 resulting from its evolving and challenging operating environment.

17 **1.4.2 Productivity Initiatives**

18 As described in FEI's Annual Review for 2022 Delivery Rates, in 2021, FEI and FortisBC Inc.
19 (together FortisBC) initiated a working group consisting of senior managers and directors from
20 different parts of the organization that is responsible for reviewing and identifying productivity
21 initiatives. Following is a summary of these productivity initiatives.

22 1. **Operational Field Excellence:** This initiative targets improvements to overall field
23 operations efficiency through better prioritization of emergency repairs, improved work
24 planning and reducing low value activities such as wait times and pulled work orders. In
25 2022, FEI provided Operations Excellence training to all Regional Managers, Operations
26 Managers and Operations Supervisor-Field employees. This training was designed to
27 improve efficiency in the field and is now complete. In addition, in 2022 FEI conducted a
28 data-driven analysis on the after-hour shift schedules of emergency responses, and
29 optimized leak survey frequency of its special premises in some regions. These
30 improvement initiatives resulted in annual O&M savings for FEI of approximately \$0.4
31 million in 2022.

32 2. **Methane Leak Detection:** FEI executed a robust satellite-based methane leak detection
33 pilot in 2022. The successful pilot confirmed the technology's capabilities of methane
34 detection on above ground assets, and potential customer driven home emissions and
35 appliance emissions for commercial and industrial customers. Another highlight from the
36 pilot was understanding the required number and ideal time of year for data captures.
37 The critical outstanding question from the pilot remains understanding the ability to

³ Two phases to date for Operational Field Excellence initiative, 2021 and 2022, totaling to approximately \$0.9 million in annual O&M savings.

1 detect methane leaks on below ground assets. Due to a low volume of below ground
2 leaks within the pilot area, the technology's capability could not be verified with
3 reasonable accuracy. Below ground leak detection capabilities must be adequate before
4 implementation of any scale can take place. An overall financial assessment, alongside
5 the below ground leak detection capability, are the primary focuses of this project
6 moving forward. FEI is encouraged with the results of the pilot and maintains the goal of
7 partial or full implementation of the technology in the future.

8 3. **Data Analytics:** This is an initiative to centralize the Company's data sources coupled
9 with a suite of analytic tools to analyze and use the data to inform decision-making.
10 FortisBC uses data to inform decision making, but its current data is spread across
11 dozens of disparate systems. Data is often siloed within departments and the volume,
12 variety, and velocity of data coming into FortisBC is increasing. It can be difficult and
13 time consuming to gather, clean, and filter the data needed to create useful information.
14 As part of the solution, Enterprise Analytics creates a data fabric atop core FortisBC
15 source and storage systems to facilitate advanced analytics opportunities. It addresses
16 key barriers by integrating existing data into a single, scalable platform to deliver easily
17 accessible and reliable data. It also simplifies connecting data assets to reduce cost and
18 effort to create reports that can be easily updated and enables automation of reporting.
19 Enterprise Analytics enables improvement in key performance indicators selected by
20 each business area, and provides enhanced data quality, and work efficiency. Benefits
21 are realized from shared information and sharing of insight across business units.
22 Additionally, quality assurance is better enabled as information is reconciled and
23 standardized.

24 In 2022, efforts focused on developing solutions for two business areas in FEI: Customer
25 Service and Major Projects. For Customer Service, Enterprise Analytics is delivering a
26 new reporting dashboard displaying key Customer Service data all in one place (gas and
27 electric). Benefits include providing a clear and easily accessible view of factors
28 contributing to performance, insights identifying strengths and opportunities to grow
29 FortisBC's relationships with its customers, operational savings through more efficient
30 customer interactions, and less effort to share metrics with parties outside of customer
31 service. This is only the starting point, as more data sources could be included, and new
32 ways of using the dashboard will be discovered, providing the potential to optimize
33 continuous improvement with additional available, integrated data. For the Major
34 Projects area, Enterprise Analytics is enabling it to provide analytical insight through
35 dashboarding and reporting on Major Projects project budgets, schedule overruns, and
36 project development. FEI expects to realize total O&M savings of approximately \$0.375
37 million by the end of 2025.

38 Enterprise Analytics will also support streamlining existing reporting processes for
39 financial and management reporting. Currently, the reporting processes work well with
40 clearly defined requirements and processes but rely on manual effort. Enterprise
41 Analytics provides an automated solution that reduces the effort required to generate

1 reports, with expected productivity gains. This automation is achieved through the use of
2 a data model to aggregate data sources and a reporting tool to allow for self-service. FEI
3 plans to implement two or three automated reporting solutions in 2023.

- 4 **4. Robotics Process Automation (RPA):** This is an efficiency initiative using automation
5 software to alleviate repetitive and simple manual tasks. With the rising volume of
6 manual tasks performed for operational work, such as financial transactions or project
7 closeout activities, departments within FortisBC are challenged.

8 In 2022, the Company initiated the first phase of RPA implementation, working to
9 automate several repetitive and manual processes in the Finance department and one in
10 the Engineering department. The processes chosen were small, low-risk opportunities to
11 introduce RPA to the organization. The first Finance process went into production in mid-
12 2022 with others following throughout the remainder of the year. The Engineering
13 process went into production in the first half of 2023. The automation of the Finance
14 processes has resulted in: faster and more timely processing of monthly journal entries,
15 allowing for earlier and increased analysis and review time; a shift in how time is spent,
16 moving from data-entry-style rote work on several processes; a reduction in time spent
17 reperforming work due to human errors; and an overall reduction in time spent on certain
18 processes. The operational efficiency value gained by RPA is incremental but
19 compounds as more processes are automated.

20 In 2023, the Company is adding to automation within the Finance area as well as
21 evaluating opportunities in other business areas to grow the RPA initiative. Additional
22 process opportunities include populating Financial and Internal Audit reports and filings,
23 application of customer bill payments, processing of rebate applications, onboarding of
24 new users within IS systems, and automating manual document control processes within
25 Engineering projects. A governance structure will also be established to prioritize and
26 control RPA implementations, as well as ensuring that RPA implementations align with
27 the overall business strategy and objectives, and that the necessary resources and
28 support are available for successful implementation and ongoing maintenance of the
29 automated processes. FEI expects to realize total O&M savings of approximately \$0.075
30 million by the end of 2024.

- 31 **5. Paperless Billing Customer Campaigns:** This initiative focuses on working with
32 customers to encourage the switch to paperless billing. In addition to the convenience
33 for customers of receiving their bill electronically and the environmental considerations of
34 less paper and physical transport of the bills, an increased percentage of customers
35 making the switch to paperless billing results in ongoing printing and postage cost
36 savings. At the start of 2022, FEI had approximately 524,000 customers choosing
37 paperless billing as their preferred bill delivery method. Following the success of several
38 internal programs that encouraged employees to highlight this option with customers and
39 including an external social media campaign that resulted in donations to food banks in
40 need, FEI achieved an increase of approximately 36,000 customers choosing this option

1 in 2022. This increase equates to approximately \$0.25 million in printing and postage
2 cost savings in 2022 for FEI as compared to 2021.⁴

- 3 6. **Other Initiatives:** FortisBC is continuously looking for efficiencies and improvements in
4 its activities, in a larger scale as the initiatives described above, or at a smaller scale as
5 described in the following initiatives.

6 Mobile enabling applications: FortisBC has different initiatives to digitize forms and
7 provide the ability to complete these forms on mobile devices in the field or office.
8 Digitizing these forms supports effective data capture, and improves consistency,
9 reliability, comprehension of data collected and reduces risk of manual errors.
10 Additionally, it reduces the administrative efforts that occur with paper forms. FortisBC
11 expects to realize minor savings by the end of 2023, and additional savings will be
12 realized as FortisBC continues to mobile-enable and digitize other paper forms.

13 Automated patching: FortisBC has started taking advantage of technologies for
14 automated patching. Moving to automated patching has streamlined the patching
15 process for several applications in the FortisBC environment. With automated patching,
16 the process can be scheduled to run during a more appropriate business outage window
17 with no user involvement required. Repetitive tasks can be automated, eliminating
18 human error, increasing productivity, and decreasing administrative costs. FortisBC
19 expects to realize minor O&M savings by the end of 2023 with increased patch cadence
20 and accuracy. Additional time savings will be seen as more systems transition to
21 automated patching.

22 Other IS Initiatives: A High Availability (HA) operating environment enables applications
23 to continue to operate even if one of the information technology components fails, and to
24 ensure continuous operation and uptime. HA allows IS to schedule upgrades, patches,
25 and release tasks during business hours, ultimately improving business operations and
26 reducing overtime costs. IS has also expanded the use of automated testing. The
27 expanded use of automation allows for an increase in system testing and improved
28 product quality with a decrease in proportionate need for additional testing resources.
29 Automation is expected to continue to expand in use at FortisBC in the future.

30 Customer Service Initiatives: Ongoing smaller initiatives include automating the tracking
31 of collections and refund cases, and improving training materials for high volume call
32 types. While on a smaller scale, these initiatives contribute to improving customers'
33 experience with FortisBC and the Company maintaining a focus on being cost effective
34 in its use of resources.

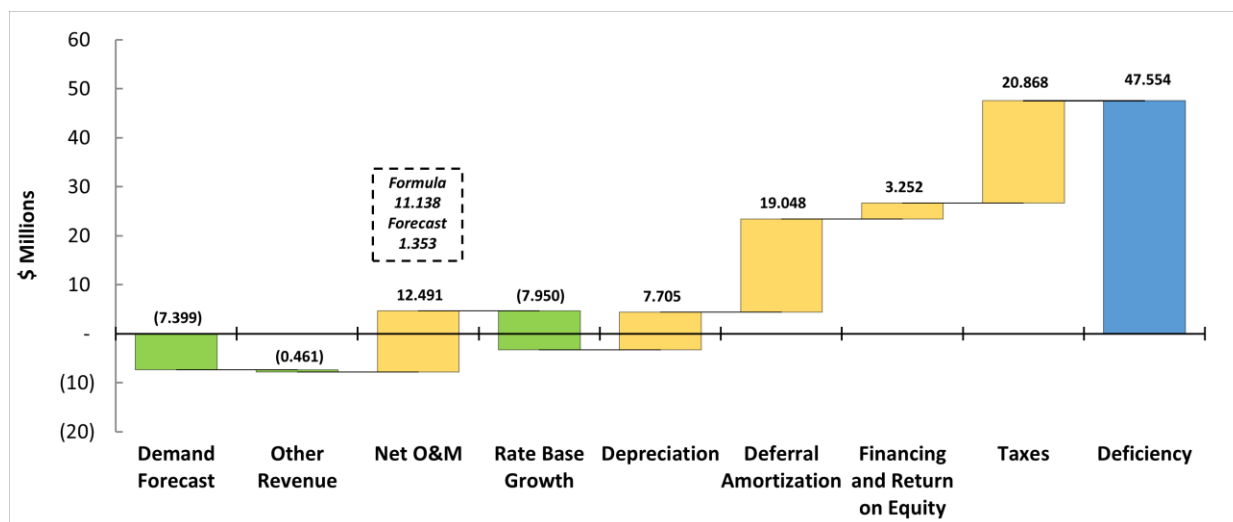

⁴ Calculation is a high-level estimate based on the incremental monthly paperless billing growth at an average savings of approximately \$1.09 per bill.

1 **1.5 REVENUE REQUIREMENT AND RATE CHANGES FOR 2024**

2 The revenue requirement components set out in the Application result in an effective delivery
3 rate increase of 4.50 percent for 2024 compared to 2023 Approved. The effective delivery rate
4 increase results from a revenue deficiency of \$47.554 million.

5 The following chart summarizes the items that contribute to the 2024 revenue deficiency. The
6 chart shows each item that increases the deficiency in yellow and each item that decreases the
7 deficiency in green. The 2024 deficiency of \$47.554 million is then the sum of all the previous
8 bars and is shown at the end of the chart in blue.

9 **Figure 1-1: 2024 Delivery Revenue Deficiency (\$ millions)**

10
11 Each of the categories is discussed briefly below.

12 **1.5.1 Demand Forecast (Section 3)**

13 In 2024, demand is forecast to decrease by approximately 1.6 PJ (or 0.72 percent) compared to
14 2023 Approved, primarily due to forecast decreases in Rate Schedule (RS) 46 Liquefied Natural
15 Gas (LNG) and RS 22 large volume transportation bypass customers. These decreases are
16 mostly offset by increases in demand from non-bypass residential, commercial, and industrial
17 customers. Overall, FEI's 2024 Forecast margin at 2023 Approved rates is estimated to
18 increase by approximately \$7.399 million compared to 2023 Approved, primarily due to the
19 increases in customers and demand from the non-bypass residential, commercial, and industrial
20 customers, despite an overall reduction in demand due to RS 46 LNG and RS 22 bypass
21 customers.

22 **1.5.2 Other Revenue (Section 5)**

23 Other Revenue is forecast to decrease the 2024 deficiency by approximately \$0.461 million,
24 primarily due to increases in the earned return associated with the City of Vancouver

1 biomethane upgrading assets. NGT-related recoveries and late payment charges are also
2 forecast to increase in 2024 when compared to 2023 Approved.

3 **1.5.3 Operations and Maintenance (O&M) Expense (Section 6)**

4 FEI establishes the majority of its O&M costs by formula during the MRP term. For 2024, the
5 formula incorporates a net inflation factor of 3.854 percent, which is inclusive of a productivity
6 improvement factor (X-Factor) of 0.5 percent, and uses a forecast of the change in average
7 customers,⁵ for a total increase in formula O&M of \$13.259 million⁶ (4.4 percent) from 2023
8 Formula O&M. O&M forecast outside of the formula is increasing by \$2.301 million⁷
9 (4.2 percent) compared to 2023 Approved. The 2024 increase in total O&M expense net of
10 capitalized overhead and Biomethane O&M transferred to the BVA is \$12.491 million.

11 **1.5.4 Rate Base Growth (Section 7)**

12 The 2024 rate base is forecast to decrease by approximately \$127.531 million when compared
13 to the 2023 Approved rate base, which results in a decrease to the 2024 Forecast earned return
14 and the 2024 deficiency of approximately \$7.950 million. The decrease in rate base is primarily
15 due to decreases in the mid-year balance of FEI's deferral accounts by approximately
16 \$214.107 million and working capital by \$38.619 million when compared to 2023 Approved. The
17 decrease in the mid-year balance of FEI's deferral accounts is primarily due to the credit
18 balances of the MCRA and CCRA, driven by strong mitigation performance by FEI at the end of
19 2022 as well as favourable forward commodity gas prices. The decreases in rate base due to
20 deferral accounts and working capital are partially offset by the increase in FEI's plant in service
21 by \$134.127 million⁸, primarily due to the additions of a number of CPCN and Major projects,
22 including the Tilbury 1A Expansion, Inland Gas Upgrades (IGU), Gibsons Capacity Upgrade
23 (GCU), Lower Mainland Intermediate Pressure System Upgrades (LMIPSU), and Pattullo
24 Gasline Replacement (PGR) projects.

25 **1.5.5 Depreciation (Section 7)**

26 Depreciation expense in 2024 is forecast to increase the 2024 deficiency by \$7.803 million
27 compared to 2023 Approved. This increase is primarily due to the additions of the CPCN and
28 Major projects noted above. The increase in depreciation expense is partially offset by
29 approximately \$0.098 million of CIAC from net additions, resulting in a net increase of
30 \$7.705 million in depreciation expense.

⁵ Modified by 75 percent.

⁶ Increase of formula O&M by \$11.138 million net of capitalized overhead.

⁷ Decrease of forecast O&M by \$1.353 million net of capitalized overhead and biomethane O&M transferred to BVA.

⁸ Increase in mid-year net plant-in-service by \$225.469 million less adjustment of \$91.342 million for timing of capital additions.

1 **1.5.6 Amortization of Deferral Accounts (Section 7 and Section 12)**

2 Amortization of deferral accounts in 2024 increased by \$19.048 million, primarily due to the
3 increased amortization of the Demand-Side Management (DSM) deferral account resulting from
4 increased DSM expenditures, and the reduced credit amortization from the Emissions
5 Regulation deferral account resulting from reduced carbon credits available for monetization.
6 These increases were partially offset by reduced amortization from the Pension & OPEB
7 Variance deferral account, the credit amortization from the proposed new PST Rebate on Select
8 Machinery and Equipment deferral account, and reduced amortization expense from the non-
9 rate base Flow-through deferral account and the MRP Earnings Sharing deferral account.

10 **1.5.7 Financing and Return on Equity (Section 8)**

11 Financing and Return on Equity (ROE) increased the 2024 deficiency by \$3.252 million through
12 changes in financing rates, as well as changes in the ratio of long-term debt versus short-term
13 debt.

14 For 2024, FEI forecasts a mid-year long-term debt issue of \$200 million and forecasts a short-
15 term debt rate of 5.56 percent, which is an increase from the 3.95 percent short-term debt rate
16 embedded in the 2023 Approved revenue requirement. Overall, the 2024 deficiency is increased
17 by \$2.838 million due to financing rate changes and increased by \$0.414 million as a result of
18 the ratio change between long-term and short-term debt.

19 In calculating its 2024 revenue deficiency, FEI has utilized its currently approved capital
20 structure and ROE of 38.5 percent and 8.75 percent, respectively, as approved by Order G-129-
21 16. As explained in Section 8.1, FEI is currently awaiting a decision on Stage 1 of the BCUC-
22 initiated Generic Cost of Capital (GCOC) proceeding which is expected to be issued in the
23 upcoming months. FEI will provide an update to its rate calculations as part of an Evidentiary
24 Update subsequent to the GCOC decision being issued.

25 **1.5.8 Taxes (Section 9)**

26 FEI's 2024 property taxes are forecast to increase by \$4.215 million or 5.3 percent from 2023
27 Approved. The increase is primarily driven by higher assessed values of distribution lines and
28 transmission lines, as well as an increase in in-lieu taxes.

29 There has been no change in the income tax rate of 27 percent from 2023. Taxes are forecast
30 to increase in 2024 by \$16.653 million or 32.2 percent from 2023 Approved. The largest driver
31 of the increase in 2024 is lower income tax deductible through CCA, which led to an increase in
32 income tax expense by \$12.284 million. The lower CCA is partly due to reduced undepreciated
33 capital cost (UCC) additions in higher rate CCA classes in the 2024 Forecast compared to 2023
34 Approved, and partly due to the phase-out of Canada's Accelerated Investment Incentive
35 starting from 2024 (i.e., enhanced 50 percent first-year allowance to be phased out in 2024).
36 Income taxes are also higher as a result of higher amortization of deferred charges as well as

1 depreciation, which is partially offset by lower taxable temporary differences associated with
2 pension and higher non-taxable temporary differences associated with removal costs.

3 ***1.6 SERVICE QUALITY INDICATORS (SECTION 13)***

4 FEI reports on its 2022 and June 2023 year-to-date SQI results in Section 13. In 2022, for the
5 nine SQIs with benchmarks, seven performed at or better than the approved benchmarks, with
6 two, Meter Reading Accuracy and Telephone Service Factor (Non-Emergency), lower than the
7 threshold due to the broader impacts of the COVID-19 pandemic, higher than normal attrition
8 levels being experienced at the contact centre, and an increased amount of high bill inquiries
9 over the year. For the four SQIs that are informational only, the Average Speed of Answer
10 results were higher due to the same challenges impacting the Telephone Service Factor (Non-
11 Emergency), while performance in 2022 for the other three informational metrics generally
12 remains at a level consistent with prior years. In 2023 to date, performance for the metrics with
13 benchmarks is trending towards meeting the benchmark or the threshold.

2. FORMULA DRIVERS

2.1 INTRODUCTION AND OVERVIEW

This section provides the calculation of the Inflation Factor (or I-Factor) and Growth Factors used for calculating the 2024 O&M and growth capital amounts according to the MRP formula.

In the MRP Decision and Order G-165-20, the BCUC approved an I-Factor using the actual CPI-BC and BC-AWE indices from the previous year and a labour weighting based on the most recent completed year of actuals.⁹

The MRP Decision approved the use of a forecast of growth¹⁰ to determine formula O&M and formula growth capital as well as a growth factor multiplier of 75 percent for formula O&M.

The Inflation Factor and Growth Factor calculations utilize the above-described inputs and determinations. For 2024, FEI has used July 2021 through June 2023 inflation data for the 2024 revenue requirement calculations, using the Statistics Canada tables included in Appendix A1 of the Application.

Section 2.2 below explains how FEI determined the 2024 Inflation Factor based on prior years' BC-CPI and BC-AWE that is used to calculate the formula O&M discussed in Section 6 and formula growth capital discussed in Section 7. Section 2.3 below explains how FEI determined the average customer count that is used to calculate the formula O&M discussed in Section 6 and provides the gross customer additions forecast that is used to calculate the formula growth capital discussed in Section 7.

2.2 INFLATION FACTOR CALCULATION SUMMARY

In the MRP Decision, the BCUC approved an I-Factor using the actual CPI-BC and BC-AWE indices from the previous year and the actual labour weighting based on the most recent completed year of actuals. FEI uses inflation data from July through June and Statistics Canada Table 18-10-0004-01 for CPI-BC and Table 14-10-0223-01 to determine AWE-BC. The supporting Statistics Canada tables are provided in Appendix A1. The latest available month of April 2023 for AWE-BC has been used as a placeholder, as results to June 2023 have not been released by Statistics Canada. Once results for these periods are available, this placeholder will be replaced with actuals and included in an Evidentiary Update or Compliance Filing.

As shown in Table 2-1 below, the I-Factor has been calculated utilizing actual CPI-BC and AWE-BC data. Applying the actual 2022 labour weighting of 49 percent, the calculation of the 2023 I-Factor is $(6.031 \text{ percent} \times 51 \text{ percent}) + (2.609 \text{ percent} \times 49 \text{ percent}) = 4.354 \text{ percent}$.

⁹ FEI's most recent year of completed actuals is 2022 so that ratio has been used for the 2024 I-Factor calculation.

¹⁰ Forecast of average customers for Formula O&M and a forecast of gross customer additions for Formula Growth Capital, both including a true-up to actual customers in the following years.

1

2

3 **2.3 GROWTH FACTOR CALCULATION SUMMARY**

4 As noted above, the BCUC approved the use of a forecast of average customers with a
5 75 percent modifier to determine formula O&M, and a forecast of gross customer additions
6 (GCA) to determine formula growth capital.

7 The calculation of the average customers used to determine 2024 Formula O&M is summarized
8 in the table below. The growth factor is applied to the unit cost O&M (UCOM), which was
9 calculated based on 2019 average customers of 1,031,862 (shown on line 21 under year 2020
10 or line 28 in Table 2-2 below). Starting with this 2019 average customer count, the calculation
11 adds 75 percent of the cumulative average of actual/forecast customer growth during the MRP
12 term from 2020 to 2024 (shown on line 26 in Table 2-2 below) to determine the average
13 customers for rate setting (shown on line 29 of Table 2-2 below).

1 **Table 2-2: Calculation of 2023 Average Customer (AC) Growth Factor**

Line No.	Date	Actual 2020	Actual 2021	Actual 2022	Projected 2023	Forecast 2024	Total for 2024 Rate Setting	Reference

2
3 The forecast for FEI's gross customer additions for determination of the formula growth capital
4 is provided in the table below.

5 **Table 2-3: Forecast Gross Customer Additions (GCA)**

Line No.	Gross Customer Additions	Reference
1	2022 Approved	20,000
2	2022 Actual	16,477
3	2022 True-up	(3,523) Section 7, Table 7-2, line 14
4		
5	2023 Approved	16,000
6		
7	2024 Forecast	15,000 Schedule 4, line 5

6
7 FEI is forecasting gross customer additions of 15,000 for 2024, which is lower than the 2023
8 Approved amount of 16,000 but is reflective of FEI's expectation of its 2023 customer growth,
9 which is projected at 15,450. As explained in Section 7.2.1, the calculation of formula growth
10 capital includes the true-up of gross customer additions from two years prior (i.e., 2022). While
11 the 2023 Projected additions are lower than 2023 Approved, and have informed FEI's forecast
12 for 2023, they do not impact the calculation of formula growth capital in this annual review;
13 instead, 2023 additions will be trued up when setting 2025 delivery rates.

1 Gross customer additions is a forecast of new customers attaching to the gas distribution
 2 system. It comprises both new construction activity and conversions from other fuels to natural
 3 gas. In developing the 2024 GCA forecast, FEI has reviewed information contained in FEI's
 4 customer relationship management system (leads, connection requests, timing of connection
 5 requests, etc.) along with interactions with builders, developers, and contractors. FEI also uses
 6 market information such as building permits, forecast housing starts and completions as well as
 7 any knowledge of policy or building code changes that may affect specific municipalities. For the
 8 2024 forecast, FEI assumed that the market capture rate for new construction is likely to retreat
 9 from previous years due to the continued impacts of building policies and codes, and strong
 10 financial incentives provided for home electrification. Further, FEI has assumed that conversion
 11 activities will be reduced from previous years due to factors such as high financing costs, which
 12 potentially are still rising, and the strong financial incentives being offered for home
 13 electrification. All of these factors are reflective of FEI's current expectation of the 2023
 14 projected and 2024 forecast customer growth.

15 **2.4 INFLATION AND GROWTH CALCULATION SUMMARY**

16 A summary of the factors used to determine formula O&M and formula growth capital for 2023 is
 17 provided in Table 2-4, including the I-Factor calculated in Section 2.2, the approved X-Factor of
 18 0.5 percent, and the forecasts of average customers and gross customer additions determined
 19 in Section 2.3.

20 **Table 2-4: Summary of Formula Drivers**

Line No.	Particulars	2024	Reference
1	CPI	6.031%	Table 2-1, Line 24
2	AWE	2.609%	Table 2-1, Line 24

4	Non Labour	51%	Table 2-1, Line 24
5	Labour	49%	Table 2-1, Line 24
6			
7	CPI/AWE Inflation	4.354%	(Line 1 x Line 4) + (Line 2 x Line 5)
8			
9	Productivity Factor	-0.500%	Order G-165-20
10			
11	Net Inflation Factor	3.854%	Line 7 + Line 9
12			
13	Average Customers for 2023 Formula O&M purposes	1,074,994	Table 2-2, Line 29
14			
15	Gross Customer Additions for 2023 Formula Growth Capital purposes	15,000	Table 2-3

21
 22 In summary, the Net Inflation Factor for 2024 is 3.854 percent. FEI's formula O&M for 2024 is
 23 determined using average customers of 1,074,994, and the formula growth capital for 2024 is
 24 determined using gross customer additions of 15,000.

3. DEMAND FORECAST AND REVENUE AT EXISTING RATES

3.1 INTRODUCTION AND OVERVIEW

This section describes FEI's forecast of gas sales and transportation volumes. FEI's forecasting method remains consistent with prior years and the methods adopted in FEI's Forecasting Method Study completed in response to the forecasting directives in Order G-86-15. The total demand is a combination of energy demand from residential, commercial, industrial, and natural gas for transportation (NGT) customers.

FEI is forecasting a decrease in consumption in the 2024 Forecast (2024F) compared to the 2023 Approved. The 2024F normalized load is forecast to be approximately 220.2 PJ, which is a decrease of 1.6 PJ (decrease of 0.72 percent) compared to the 2023 Approved forecast. The decrease in 2024F is due to decreases in both industrial and NGT forecasts.

Based on the 2023 Approved rates for each customer class, FEI's 2024 revenue forecast is \$1,830 million and FEI's 2024 gross margin forecast is \$1,086 million.

FEI has provided further information supporting its demand forecast in Appendix A of the Application.

3.2 OVERVIEW OF FORECAST METHODS

FEI's demand forecast methods are consistent with prior years and the recommendations in the FEI Forecasting Method Study filed as Appendix B2 in FortisBC's 2020-2024 MRP Application. The Forecasting Method Study represented the culmination of a number of years of research and testing of alternative forecasting methods in response to the forecasting directives in Order G-86-15 and accompanying decision related to the FEI Annual Review for 2015 Rates Application. As a result of this study, FEI adopted the Exponential Smoothing method (ETS) for the purpose of forecasting residential and commercial use rates, as ETS proved to be the most accurate method for this purpose.

See Appendix A3 for a detailed description of FEI's demand forecast methods.

The demand forecast relies on three components:

- the residential and commercial net customer additions forecast;¹¹
- the residential and commercial use per customer (UPC) forecast; and
- the industrial forecast.

The demand forecast for residential and commercial customers is based on forecasts for the number of customers and UPC rates. Specifically, the monthly UPC is estimated for customers

¹¹ The net customer additions are the year-over-year change in the total number of customers.

1 under Rate Schedules 1, 2, 3 and 23 and then multiplied by the corresponding monthly forecast
2 of the number of customers in these rate schedules. Monthly values are then aggregated for
3 each year to derive the annual energy consumption.

4 The forecast of industrial energy demand is based upon customer-specific forecasts obtained
5 through an Industrial Survey, as discussed in Section 3.3.3.

6 The forecast NGT demand is for Compressed Natural Gas (CNG) and Liquefied Natural Gas
7 (LNG) volumes. The NGT demand and the LNG demand forecast is discussed in Section 3.3.4
8 below.

9 The following sections set out the results of the load forecast. In the figures provided in the load
10 forecast sections, the following three time periods are shown:

11 • Actual Years: Actual years are those for which actual data exists for the full calendar
12 year. For this Annual Review, the latest calendar year for which full actual data exists is
13 the 2022 calendar year.

14 • Seed Year: The Seed Year is the year prior to the first forecast year. The Seed Year is
15 forecast based on the latest years of actual data available¹², and will be different than
16 the original forecast for that year in the previous filing. For example, for this Application
17 the Seed Year is 2023 (2023S) and the Seed Year forecast is based on the latest actual
18 years, including 2022. As such, the 2023 Seed Year forecast in this Application will differ
19 from the 2023 Forecast presented in the Annual Review for 2023 Delivery Rates, for
20 which 2022 actual data was not available.

21 • Forecast Year: This is the year or years for which the forecast is being developed. This
22 can be one year (in the case of the Annual Review) or a range of two or more years
23 depending on the filing. In this Application, the forecast year is 2024 (2024F).

24 • Also included in the figures in this section is the prior year's forecast (shown as the
25 green Approved lines in the figures below), as presented in the Annual Review for 2023
26 Delivery Rates.

27 **3.3 DEMAND FORECAST**

28 FEI's total energy demand consists of the weather normalized residential and commercial
29 demand, and the customer-specific industrial, NGT, and non-NGT (LNG) demand. In aggregate,
30 the absolute demand forecast variance in 2022 was 5.5 percent.¹³

¹² FEI's load forecast is developed using only complete years of historical data. FEI requires the complete year of demand data in order to validate it, including the review of and potential adjustments to unbilled energy. For this reason, partial year data is not used in forecasting.

¹³ The primary driver of the 5.5 percent variance between 2022 Forecast and 2022 Actual demand is the impact of the expiry of FEI's contract with BC Hydro Island Generation (IG). The 2022 Forecast was prepared in the spring of 2021. At that time, it was not known that BC Hydro would not renew the IG contract and that the contract would

1 As shown in Figure 3-1 below, the total load is forecast to be 220.2 PJ in 2024F, which is an
2 increase of 0.7 PJ from 2023S.

3 **Figure 3-1: Total Energy Demand in PJ**

4
5 The residential, commercial, industrial, and NGT and non-NGT (LNG) demand forecasts are
6 provided separately in the following subsections.

7 **3.3.1 Residential**

8 **3.3.1.1 Residential Customer Additions**

9 Consistent with past practice, FEI uses the Conference Board of Canada (CBOC) housing starts
10 forecast as a proxy for residential net customer additions. The CBOC data used for the forecast,
11 provided in Appendix A1, was issued in February 2023. The 2024 forecast of 9,903 additions
12 reflects the actual residential additions recorded in 2022 and the single family and multi-family
13 growth rate forecasts from the CBOC forecast.

instead expire in April 2022. As a result, the 2022 Forecast included a full year of demand from BC Hydro IG while the actual demand was only from January 2022 to April 2022 (i.e., up to the point of termination). Excluding the impact of BC Hydro IG, the aggregate variance drops to 1.3 percent, consistent with recent years' variance results.

1 As shown in Figure 3-2, residential customer additions are forecast to increase by 1,026 in
2 2024F compared to 2023S. Figure 3-2 provides the residential net customer additions for 2013
3 through 2024.

4 **Figure 3-2: Residential Net Customer Additions**

5

6 **3.3.1.2 Residential UPC**

7 The residential UPC forecast was developed using the ETS method with the most recent
8 10 years of historical weather-normalized UPC, described in Appendix A3.

9 As shown in Figure 3-3, the residential UPC is forecast to decrease slightly by approximately
10 0.1 GJ in 2024F compared to 2023S.

1

Figure 3-3: Rate Schedule 1 UPC

2

3 **3.3.1.3 Residential Demand**

4 Taking into account the customer additions and UPC forecasts described above, and as shown
 5 in Figure 3-4 below, residential demand is forecast to increase by 0.8 PJ in 2024F compared to
 6 2023S.

1

Figure 3-4: Normalized Residential Demand

2

3.3.2 Commercial

3.3.2.1 Commercial Customers

The commercial (i.e., Rate Schedules 2, 3, and 23) net customer additions forecast is based on the average of the actual net customer additions over the last three years for which a full year of actual data is available (i.e., 2020 to 2022). The commercial forecast does not include NGT customers that are taking service under Rate Schedule 3 or 23. Please refer to Section 3.3.4 for forecasts related to NGT customers.

As shown in Figure 3-5 below, FEI is forecasting 426 net commercial customer additions in 2024F, consistent with 2023S.

1 **Figure 3-5: Commercial Net Customers Additions (Rate Schedule 2, 3, and 23)**

2

3 **3.3.2.2 Commercial UPC**

4 The commercial UPC forecast was developed using the ETS method, considering the most

5 recent 10 years of historical weather-normalized commercial UPC data.

6 As shown in Figure 3-6, the Rate Schedule 2 UPC is forecast to decrease slightly by 0.9 GJ in

7 2024F compared to 2023S.

1

Figure 3-6: Rate Schedule 2 UPC

2

3 As shown in Figure 3-7, the Rate Schedule 3 UPC is forecast to increase by approximately 7 GJ
4 in 2024F compared to 2023S.

1

Figure 3-7: Rate Schedule 3 UPC¹⁴

2

3 As shown in Figure 3-8, the Rate Schedule 23 UPC is forecast to increase by approximately
4 39 GJ in 2024F compared to 2023S.

¹⁴ Excludes NGT customers under Rate Schedule 3.

1

Figure 3-8: Rate Schedule 23 UPC¹⁵

2

3 **3.3.2.3 Commercial Demand**

4 Taking into account the commercial customer additions and UPC forecasts described above,
 5 and as seen in Figure 3-9 below, commercial demand is forecast to increase slightly by 0.2 PJ
 6 in 2024F compared to 2023S.

¹⁵ Excludes NGT customers under Rate Schedule 23.

1

Figure 3-9: Commercial Demand¹⁶

2

3.3.3 Industrial Demand

The 2024F demand for industrial customers was forecast using the Industrial Survey.

For the 2024 Forecast, customers responded to the survey in May and June of 2023. The survey was launched as close as possible to the filing date to mitigate potential variances in the forecast. The survey needed to be completed by June 21, 2023 to allow sufficient time for internal review of the results, loading of data in FEI's Forecasting Information System (FIS), preparing the forecast and drafting the Application. Since the survey requires approximately five weeks to complete, it was launched on May 15, 2023.

As shown in Table 3-1 below, the response rate achieved in 2023 was approximately 89.9 percent of industrial volumes, representing 48.5 percent of customers. There was no reply from 49.5 percent of industrial customers who received the survey after three reminder notifications; this group represents only 9.9 percent of the industrial demand. Surveys could not be delivered to 2 percent of the industrial customers due to issues such as incorrect email addresses; this group represents 0.2 percent of the total industrial demand.

¹⁶ Excludes NGT customers under Rate Schedules 3 and 23.

1 **Table 3-1: Industrial Survey Response Rates**

Industrial Survey	Description	Customers	Demand
Survey Completed	The survey was delivered and completed.	48.5%	89.9%
Survey delivered but not completed	The survey was delivered, but after three follow-up emails was not completed.	49.5%	9.9%
Survey undeliverable	The survey was not deliverable. This can be a result of invalid email addresses, faulty email servers etc.	2.0%	0.2%
Total		100.0%	100.0%

2
3 The forecast of demand for customers that either chose not to reply to the survey or could not
4 be contacted (representing 10.1 percent of the total industrial demand) was set to equal 2022
5 Actual consumption.

6 As shown in Figure 3-10 below, the demand from the industrial rate schedules is forecast to be
7 71.7 PJ in 2024F, which is a decrease of 1.2 PJ from 2023S and a decrease of 1.6 PJ from
8 2023 Approved.

9 **Figure 3-10: Industrial Demand¹⁷**

10
¹⁷ Excludes NGT customers under Rate Schedules 5 and 25, and LNG customers under Rate Schedule 46.

1 3.3.4 Natural Gas for Transportation and LNG Demand

2 This section summarizes the CNG and LNG demand forecasts related to demand from NGT
3 customers for CNG and LNG, as well as non-NGT related demand for LNG supplied under Rate
4 Schedule 46. Table 3-2 below provides the 2023 Approved, 2023 Projected and 2024 Forecast
5 total NGT and non-NGT LNG demand. As directed by Order G-86-15, the forecast of the total
6 NGT and non-NGT LNG demand includes the forecast volume provided to customers under
7 spot purchase agreements (i.e., LNG demand that exceeds the Contract Demand of the
8 individual Rate Schedule 46 customer).

9 **Table 3-2: FEI Total Natural Gas Demand for NGT and non-NGT LNG (GJ per year)**

GJ	2023 Approved	2023 Projected	2024 Forecast
CNG	1,468,479	1,580,569	1,762,069
LNG	1,527,696	1,561,900	1,562,600
Total NGT Demand (GJ)	2,996,175	3,142,469	3,324,669
Non-NGT LNG (export)	3,690,789	682,000	1,471,000
Total NGT and Non-NGT Demand (GJ)	6,686,964	3,824,469	4,795,669

10
11 The following figure shows the most recent 10-year Actuals from 2013 to 2022, 2023 Projected
12 and 2024 Forecast annual demand for CNG (RS 3/5/23/25/6P) and LNG (RS 46), including a
13 breakdown of LNG demand between NGT and non-NGT customers.

14 **Figure 3-11: Actual (A), Projected (P) and Forecast (F) Demand for CNG & LNG¹⁸**

15
¹⁸ Forecast includes all NGT related CNG and LNG demand, and Other LNG demand, inclusive of contract and excess demand flowing through stations as well as spot volumes and third-party station CNG/LNG volumes.

1 The 2023 Projected demand of 3.8 PJ is 0.6 PJ higher than the 2022 Actual demand of 3.2 PJ,
2 as shown in Figure 3-11 above. This increase is primarily related to the projected increase in
3 non-NGT LNG export deliveries by ISO containers in 2023.

4 For CNG demand, the 2024 Forecast is 0.2 PJ higher than the 2023 Projected level, primarily
5 due to increasing demand by customers at existing CNG stations. It can be seen from Figure 3-
6 11 above that the CNG demand has been gradually increasing each year since 2013.

7 For LNG demand, the 2024 Forecast is 0.8 PJ higher than the 2023 Projected level. This is
8 primarily driven by non-NGT LNG demand as NGT customers are expected to remain
9 consistent with the 2023 Projected level. The increase in the non-NGT LNG 2024F demand
10 from 2023P is a result of FEI successfully completing trial shipments of LNG via ISO containers
11 with multiple new customers in Asia during the winter of 2022/23. These customers have all
12 expressed interest to increase their purchases over the winter of 2023/24, as demand for LNG
13 in Asia increases. FEI is continuing discussions with existing and potential customers and
14 expects to secure firm contracts later in 2023.

15 **3.4 REVENUE AND MARGIN FORECAST**

16 The forecast of revenues and margins has been developed by considering the total 2024
17 Forecast energy in GJ applied at 2023 Approved delivery rates and applicable 2023 Approved
18 commodity and storage and transport rates (most recently approved commodity and storage
19 and transport rates).

20 **3.4.1 Revenue**

21 Revenues are a function of both energy consumption and the rate applicable at the time the
22 energy is consumed. FEI has developed its forecast of revenues by multiplying the energy
23 forecast by the approved rates for each customer class.

24 Table 3-3 below summarizes the 2023 Approved, 2023 Projected and 2024 Forecast revenue,
25 by customer segment, at currently approved 2023 rates.

26 **Table 3-3: Forecast Sales Revenue at 2023 Approved Rates (Commodity, Midstream, and**
27 **Delivery)**

Revenue (\$ millions)	Approved 2023	Projected 2023	Forecast 2024
Residential ¹	1,257.965	1,111.137	1,040.799
Commercial ²	697.400	615.794	562.438
Industrial ³	293.752	233.884	226.655
Total	2,249.117	1,960.815	1,829.892

28

1 Notes to table:

2 ¹ Rate Schedule 1.

3 ² Rate Schedules 2, 3, 23.

4 ³ Rate Schedules 4, 5, 6, 6P, 46, 7, 22, 25, 27, Byron Creek, Joint Venture.

5 **3.4.2 Margin**

6 Margins are calculated by subtracting the cost of gas (discussed in Section 4) from the total
7 revenues set out in Table 3-3 above.

8 Table 3-4 below summarizes the 2023 Approved, 2023 Projected and 2024 Forecast margin, by
9 customer segment, at currently approved 2023 delivery rates.

10 **Table 3-4: Forecast Gross Margin at 2023 Approved Delivery Rates**

Margin (\$ millions)	Approved 2023	Projected 2023	Forecast 2024
Residential ¹	643.916	642.883	649.096
Commercial ²	294.040	299.372	300.281
Industrial ³	140.388	129.823	136.366
Total	1,078.344	1,072.078	1,085.743

11 Notes to table:

12 ¹ Rate Schedule 1.

13 ² Rate Schedules 2, 3, 23.

14 ³ Rate Schedules 4, 5, 6, 6P, 46, 7, 22, 25, 27, Byron Creek, Joint Venture.

16 Variances between the delivery margin forecast in this section and actual delivery margin are
17 captured in either the RSAM deferral account if they relate to use rate variances for residential
18 and commercial customers, or the Flow-through deferral account for all other variances.

19 **3.5 SUMMARY**

20 FEI's forecast of demand for natural gas is based upon methods that are consistent with those
21 used in prior years. FEI's forecast provides a reasonable estimate of future natural gas demand
22 for 2024. Based on these methods, FEI is forecasting a decrease in consumption in 2024F of
23 1.6 PJ compared to the 2023 Approved level. Based on the 2023 Approved rates for each
24 customer class, FEI's 2024 Forecast revenue is approximately \$1,830 million, which is a
25 decrease of approximately \$419 million from the 2023 Approved amount.

1 4. COST OF GAS

2 The cost of gas includes the cost of the gas commodity, the cost of midstream resources
3 (storage and transportation), and the Core Market Administration Expense (CMAE) costs
4 associated with providing the gas supply function. With the exception of the CMAE costs, as
5 further explained below and in Appendix B, the Company is not requesting approval of forecast
6 gas costs within this Application. Instead, any rate changes related to the flow through of gas
7 costs are dealt with in separate applications to the BCUC. Any variations between forecast and
8 actual gas costs will continue to be returned to, or recovered from, customers through the
9 existing deferral account mechanisms.

10 In compliance with the BCUC's determination in Decision and Order G-79-14, FEI will be filing
11 annually for approval of the CMAE budget as part of the Annual Review filings. Further,
12 pursuant to the BCUC's direction in the FEI Annual Review for 2020 and 2021 Delivery Rates
13 Decision and Order G-319-20, FEI will include a comprehensive review of the CMAE costs in its
14 next revenue requirements or MRP application following the MRP term. Please see Appendix B
15 for a detailed discussion of the CMAE budget. In summary, and as included in the Approvals
16 Sought (Section 1.2) of the Application, FEI is requesting BCUC approval of the following
17 related to CMAE, effective January 1, 2024:

- 18 • Approval of the 2024 CMAE Budget of \$6.050 million, as set out in Schedule 1 of
19 Appendix B; and
- 20 • Approval of the allocation of the 2024 CMAE between the Commodity Cost
21 Reconciliation Account (CCRA) and the Midstream Cost Reconciliation Account (MCRA)
22 based on the allocation percentages of 30 percent and 70 percent, respectively.

23 While the Company is not requesting approval of forecast gas costs (other than CMAE) with this
24 Application, the forecast cost of gas is required in the determination of a number of revenue
25 requirement line items that form part of the forecasts included in this Application. The total cost
26 of gas for the purposes of this Application has been determined by multiplying forecast sales
27 volumes using the demand forecast described in Section 3, by the current unit gas cost
28 recovery charges for each rate schedule.

29 The current natural gas commodity cost recovery rate for the Mainland and Vancouver Island
30 service area and the Fort Nelson service area became effective July 1, 2023 pursuant to Order
31 G-148-23, dated June 15, 2023. The natural gas storage and transport rates and riders, also
32 known as the midstream cost recovery rates and MCRA rate riders, for the Mainland and
33 Vancouver Island service area and the Fort Nelson service area became effective January 1,
34 2023 pursuant to Order G-347-22, dated December 1, 2022.

35 The table below sets out the forecast cost of gas at existing rates, by rate schedule group.

1 **Table 4-1: Forecast Cost of Gas at Existing Rates^{19,20}**

Cost of Gas (\$ millions)	Approved 2023	Projected 2023	Forecast 2024
Residential¹	614.049	468.254	391.703
Commercial²	403.360	316.422	262.157
Industrial³	153.364	104.061	90.289
Total	1,170.773	888.737	744.149

2
3 Notes to table:

- 4 ¹ Includes Rate Schedule 1 volumes
5 ² Includes Rate Schedule 2, 3, 23 volumes
6 ³ Includes Rate Schedule 4, 5, 6, 6P, 46, 7, 22, 25, 27 volumes

7 The 2023 Approved, 2023 Projected and 2024 Forecast cost of gas amounts shown in Table 4-
8 1 above are based on the following:

- 9 • The 2023 Approved cost of gas was included as part of FEI's 2023 Annual Review which
10 was filed with the BCUC in the Summer of 2022. It was calculated based on the
11 approved²¹ commodity cost recovery rate that was effective at the time of filing, which
12 was \$5.907 per GJ effective July 1, 2022.
- 13 • For the 2023 Projected cost of gas, since the commodity cost recovery rate is reviewed
14 by the BCUC on a quarterly basis, instead of using the same commodity cost recovery
15 rate as was approved by Order G-154-22 (\$5.907 per GJ), FEI used the approved
16 commodity cost recovery rates for 2023. The rates used for the 2023 Projected cost of
17 gas are:
- 18 ○ \$5.159 per GJ as approved by Order G-347-22 for January to April 2023;
19 ○ \$4.159 per GJ as approved by Order G-54-23 for April to June 2023; and
20 ○ \$3.159 per GJ as approved by Order G-148-23 effective from July 1, 2023.
- 21 • The 2024 Forecast cost of gas is based on the currently effective commodity cost
22 recovery rate, which is \$3.159 per GJ as approved by Order G-148-23 effective July 1,
23 2023.

24 The natural gas storage and transport, or midstream, component of the cost of gas includes the
25 costs for the contracted third-party pipeline and storage resources, seasonal and peaking
26 supply, and also includes costs for unaccounted for gas (UAF).

¹⁹ Biomethane commodity costs are excluded from the table because they are allocated directly to the Biomethane Variance Account (BVA).

²⁰ Cost of gas from transportation customers (i.e., RS 22, 23, 25 and 27) is resulting from UAF.

²¹ Approved by Order G-154-22.

1 UAF refers to gas that is not specifically accounted for in gas energy balance of receipts,
2 deliveries, and operations use. UAF includes measurement variances and line loss of gas that is
3 flowing in the transmission and distribution systems. Sources of UAF comprise, but are not
4 limited to, system leakage, lost gas (i.e., gas lost as a result of utility and third-party activities,
5 including gas theft), and measurement inaccuracies. The cost of UAF related to the Sales rate
6 classes is included in the cost of gas and recovered from core customers²² via the gas cost
7 rates. The cost of UAF related to the Transportation Service rate classes is included in the
8 determination of the delivery rates to facilitate recovery of UAF costs from Transportation
9 Service customers, as they do not pay midstream charges.

²² Core customers are those for whom FEI is obligated to ensure the purchase, transportation, and uninterrupted delivery of natural gas to their premises.

5. OTHER REVENUE

5.1 INTRODUCTION AND OVERVIEW

This section discusses FEI's forecasts of Other Revenue. In the MRP Decision (page 74), the BCUC approved that forecast variances in certain components of Other Revenue were to be subject to earnings sharing. These components include Late Payment Charges, Application Charges, NSF Returned Cheque Charges, Other Recoveries, and NGT Overhead and Marketing Recoveries. The remaining components of Other Revenue continue to receive flow-through treatment of variances between forecast and actual results, consistent with the treatment during the 2014-2019 PBR Plan term.

As shown in the table below, FEI is forecasting Other Revenue to increase from the amount approved for 2023, primarily due to an increase in Late Payment Charges, NGT Related Recoveries, and Biomethane Other Revenue.

Table 5-1: Other Revenue Components (\$ millions)

	Approved 2023	Projected 2023	Forecast 2024
Late Payment Charge	\$ 3.385	\$ 3.576	\$ 3.607
Application Charge	2.020	1.781	1.797
NSF Returned Cheque Charges	0.028	0.028	0.028
Other Recoveries	0.288	0.288	0.288
Tilbury Insurance Proceeds	-	6.135	-
NGT Related Recoveries	4.460	4.545	4.638
Biomethane Other Revenue	0.512	1.069	0.762
SCP Third Party Revenue	13.286	13.286	13.320
LNG Capacity Assignment	18.039	18.039	18.039
Total Other Operating Revenue	\$ 42.018	\$ 48.747	\$ 42.479

In the following sections, FEI summarizes the methods used to forecast the line items included in the table above, and discusses a new one-time item included in the 2023 Projected Other Revenue.

5.2 OTHER REVENUE COMPONENTS

5.2.1 Late Payment Charge

As explained in the Annual Review for 2023 Delivery Rates, Late Payment Charges were historically forecast based on the average of the most recent three years of actual Late Payment Charges earned. However, due to a number of factors in the most recent years, including the COVID-19 pandemic and FEI's implementation of customer relief measures, the actual amounts collected have fluctuated significantly from year to year. As these fluctuations would still be

1 present in the most recent three years of actual results (i.e., 2020, 2021 and 2022), FEI has
2 utilized the same approach used to calculate the 2023 Approved Late Payment Charges in the
3 Annual Review for 2023 Delivery Rates. Accordingly, the 2024 Forecast for Late Payment
4 Charges is calculated based on the average of 2022 Actual Late Payment Charges of \$3.638
5 million and 2023 Projected of \$3.576 million. This results in a forecast increase in Late Payment
6 Charges of \$0.222 million compared to 2023 Approved and is slightly higher than the 2023
7 Projected amount by approximately \$31 thousand.

8 **5.2.2 Application Charge**

9 Application Charges are calculated based on the application fees specified in FEI's rate
10 schedules applied to new customer connections or current customer reconnections. The 2024
11 Forecast amounts are expected to decrease by \$0.223 million compared to 2023 Approved,
12 which is consistent with FEI's forecast of reduced gross customer additions in 2024 as
13 discussed in Section 2.3 of the Application.

14 **5.2.3 NSF Returned Cheque Charges and Other Recoveries**

15 The 2024 Forecast amounts for NSF Returned Cheque Charges and other miscellaneous
16 income items are consistent with 2023 levels.

17 **5.2.4 Tilbury Insurance Proceeds**

18 FEI has included an additional flow-through item for 2023 Projected, which is a one-time credit
19 of \$6.135 million which FEI is flowing 100 percent to customers. The credit represents the actual
20 insurance proceeds that FEI received in 2023 due to the delayed completion of the Tilbury 1A
21 Expansion Project (T1A Project).

22 The T1A Project had an original in-service date of 2017; however, as explained in FEI's Annual
23 Review for 2018 Delivery Rates proceeding, the completion of the project was delayed to 2018
24 due to an incident that occurred on August 19, 2017.²³ FEI filed an insurance claim in March
25 2018 and received confirmation in early 2023 that these proceeds would be paid out, with the
26 final proceeds received in March 2023. These insurance proceeds will be treated as flow-
27 through and fully returned to customers, as shown in Section 12, Table 12-4.

28 **5.2.5 NGT Related Recoveries**

29 FEI has forecast recoveries associated with the NGT program related to the overhead and
30 marketing charge that is applied to FEI fuelling station customers, tanker rentals from LNG
31 customers, and CNG and LNG fuelling stations (CNG & LNG Service Revenues) as shown in
32 Table 5-2 below. Variances between forecast and actual NGT Overhead and Marketing
33 Recoveries are subject to earnings sharing. Variances in the NGT Tanker Rental Revenue and
34 CNG & LNG Service Revenues are treated as Flow-through with the variances being captured

²³ FEI Annual Review for 2018 Delivery Rates, Exhibit B-6, CEC IR1 19.2.

1 in the Flow-through deferral account and the CNG & LNG Service Revenues deferral account,
2 respectively.

3 **Table 5-2: 2023 and 2024 NGT Related Recoveries (\$ millions)**

	Approved 2023	Projected 2023	Forecast 2024
NGT Overhead and Marketing Recovery	\$ 0.273	\$ 0.322	\$ 0.341
NGT Tanker Rental Revenue	0.926	1.008	1.021
CNG & LNG Service Revenues	3.261	3.215	3.276
Total NGT Related Recoveries	\$ 4.460	\$ 4.545	\$ 4.638

5 The following subsections discuss each of the NGT related recoveries.

6 **5.2.5.1 NGT Overhead and Marketing Recovery**

7 Pursuant to Order G-78-13, FEI has included a forecast of overhead and marketing (OH&M)
8 recovery from FEI's NGT fuelling station customers. As shown in Table 5-3 below, the forecast
9 NGT OH&M revenue for 2024 is \$0.341 million. This revenue is calculated by multiplying the
10 approved OH&M rate of \$0.52 per GJ by the applicable²⁴ 2024 Forecast CNG and LNG sales
11 volumes.

12 **Table 5-3: NGT Overhead and Marketing Revenue Forecast (\$ millions)**

	2023 Approved	2023 Projected	2024 Forecast
Applicable Volume (GJ)	525,898	619,000	655,899
Rate (\$/GJ)	\$ 0.52	\$ 0.52	\$ 0.52
Total NGT OH&M Revenue (\$ millions)	\$ 0.273	\$ 0.322	\$ 0.341

14 **5.2.5.2 NGT Tanker Rental Revenue**

15 Table 5-4 below shows the tanker rental revenue for each type of FEI-owned tanker based on
16 the currently approved RS 46 tanker rental rates.

²⁴ For host customers with CNG or LNG delivered through an FEI-owned CNG or LNG fuelling station, the applicable volume for OH&M is limited to the contract minimum volume. For third-party fuelling customers, all volume is applicable for OH&M.

1

Table 5-4: LNG Tanker Rental Revenue (\$ millions)

Tanker Rental Revenue	2023 Approved	2023 Projected	2024 Forecast
Standard Tanker Rental Deliveries	96	120	96
Rate (\$/Delivery)	\$ 308	\$ 321	\$ 327
Sub Total (\$ millions)	\$ 0.030	\$ 0.039	\$ 0.031
Tridem Tanker Rental Deliveries	-	-	-
Rate (\$/Delivery)	\$ 368	\$ 384	\$ 392
Sub Total (\$ millions)	\$ -	\$ -	\$ -
Marine Equipped Tridem Tanker Rental Deliveries	1,728	1,792	1,792
Rate (\$/Delivery)	\$ 519	\$ 541	\$ 552
Sub Total (\$ millions)	\$ 0.897	\$ 0.969	\$ 0.989
Total Tanker Rental Revenue (\$ millions)	\$ 0.926	\$ 1.008	\$ 1.021

2

3 For the Standard tankers, the 2023 Projected rental revenue is forecast to be slightly higher
4 than the 2023 Approved, primarily due to short-term operational issues at LNG stations which
5 resulted in an increased use of the Standard tankers to ensure supply at these stations. For
6 2024, FEI is forecasting the Standard tanker rental revenue to be consistent with 2023
7 Approved, as the short-term operational issues at the LNG stations are not expected to
8 continue.

9 The Tridem tanker rental revenue continues to be zero. As explained in previous annual review
10 applications, these tankers are primarily used for long haul deliveries in Canada, such as to the
11 Yukon, and these tankers are not permitted in the US (due to weight restrictions in the US). FEI
12 does not expect Canadian deliveries to occur outside of BC and is therefore expecting the 2023
13 Projected and 2024 Forecast Tridem tanker rental revenue to be zero.

14 For the Marine Equipped Tridem tankers, the increase in the 2023 Projected deliveries is due to
15 new marine vessels being commissioned by customers in 2022 and 2023. FEI expects this
16 increased level of tanker deliveries to continue in 2024.

17 **5.2.5.3 CNG and LNG Service Revenue Forecast**

18 The CNG and LNG Service Other Revenue forecast includes the FEI-owned CNG and LNG
19 fuelling station recoveries (i.e., capital, O&M, and short-term fuelling rates) at the contracted
20 minimum take-or-pay volumes of each station. Table 5-5 below provides a breakdown of the
21 CNG and LNG fuelling station recoveries. The forecast of station recoveries as Other Revenue
22 does not include recoveries from spot volume and excess volume (i.e., fuelling customer uses
23 more than their contracted minimum take-or-pay volume).²⁵

²⁵ Station revenue recoveries from spot and excess volume are recorded in the CNG and LNG Recoveries deferral account. CNG and LNG Station recoveries under minimum take-or-pay contracts are recorded in Other Revenue.

Table 5-5: CNG and LNG Fuelling Service Station Revenue Forecast (\$ millions)

	2023 Approved		2023 Projected		2024 Forecast	
CNG Station	\$	2.570	\$	2.543	\$	2.594
LNG Station		0.525		0.524		0.535
Subtotal - NGT Stations	\$	3.095	\$	3.067	\$	3.128
Surrey Ops CNG Pump		0.166		0.148		0.148
Total	\$	3.261	\$	3.215	\$	3.276

As discussed in Section 3.3.4 of the Application, FEI is forecasting a small increase in NGT demand from CNG customers while the NGT demand from LNG customers will remain mostly flat between 2023 Projected and 2024 Forecast. As such, the small forecast increase in the recoveries for 2024 is primarily due to the approved annual increase in the fuelling rates at each individual station (i.e., the capital rate escalates at two percent per year and the O&M rate escalates by BC CPI per year).

5.2.6 Biomethane Other Revenue

The Other Revenue amounts of \$1.069 million for 2023 Projected and \$0.762 million for 2024 Forecast shown in Table 5-1 above are the transfers from delivery margin to the Biomethane Variance Account (BVA) for the earned return and income tax components of the cost of service of the Biomethane capital assets.

In accordance with Order G-210-13, which approved the Biomethane Program on a permanent basis, the following delivery margin related costs must be included in the BVA:²⁶

- Upgrading plant cost of service;
- Interconnection cost of service; and
- Program overhead costs.²⁷

The 2023 Projected amount of \$1.069 million is comprised of \$0.824 million of earned return and \$0.245 million of income tax expense related to FEI's biomethane assets. The 2024 Forecast of \$0.762 million is comprised of \$2.825 million of earned return, which is offset by a total income tax expense credit of \$2.063 million. The primary driver of the increased earned return and the shift in income tax expense from a debit position in 2023 to a credit position in 2024 is the City of Vancouver (COV) biomethane project. As discussed further in Section 7.2.3.1 of the Application, the COV project is now expected to be complete and enter FEI's rate base in 2024, resulting in the increase in the 2024 forecast earned return. The COV biomethane assets will also create a large income tax credit in 2024 due to their high capital cost allowance

²⁶ The cost of procuring Biomethane supply does not need to be transferred because it is accounted for directly in the BVA.

²⁷ Program costs as defined in Order G-210-13 include education, marketing, direct administration, cost of enrollment and the cost of IT upgrades.

1 (i.e., 50 percent). The 2024 Forecast includes an income tax expense credit due to the COV
2 project of approximately \$2.148 million, which results in an overall income tax expense credit of
3 \$2.063 million when combining the income tax expense of other biomethane projects.

4 **5.3 SOUTHERN CROSSING PIPELINE (SCP) THIRD PARTY REVENUE**

5 The SCP Third Party Revenue includes the items shown in the table below.

6 **Table 5-6: 2023 and 2024 SCP Revenue Components (\$ millions)**

	Approved 2023	Projected 2023	Forecast 2024
MCRA	\$ 13.284	\$ 13.284	\$ 13.320
Net Other Mitigation - West to East Capacity	0.002	0.002	-
Total SCP Revenue	\$ 13.286	\$ 13.286	\$ 13.320

7
8 The components of the SCP Third Party Revenues shown in Table 5-6 are discussed
9 separately below. Any variance from the forecast SCP Third Party Revenues will continue to be
10 recorded in the SCP Mitigation Revenues Variance Account and returned to or recovered from
11 customers over a two-year period.

12 **5.3.1 Midstream Cost Reconciliation Account (MCRA)**

13 The Other Revenue of \$13.320 million²⁸ is related to the inclusion of the 105 MMcfd of SCP east
14 to west capacity in the MCRA portfolio. As part of the FEI Annual Review for 2020 and 2021
15 Delivery Rates Decision and Order G-319-20, the BCUC approved, effective November 1, 2020,
16 the debiting of the MCRA and crediting of Other Revenue in the amount of \$346.617 per MMcfd.
17 This treatment is approved to remain in effect for the remainder of the MRP term.

18 **5.3.2 Net Other Mitigation Revenue**

19 The Company has been seeking, and will continue to seek, opportunities to contract the west to
20 east capacity on the SCP.

21 Mitigation revenue generated from the SCP west to east capacity ties to market price
22 differentials during the summer months and reflects the existing pipeline capacity within the
23 region. The mitigation revenue forecast is net of the cost of using FEI gas supply resources,
24 such as the Westcoast Energy Inc. Kingsvale South transportation capacity held in the
25 midstream portfolio, to connect with the SCP system. The mitigation revenue net of the gas
26 supply resource costs is allocated to Other Revenue.

27 The forecast mitigation revenue for the SCP west to east capacity for 2024 is based on the
28 forward market price differentials for summer 2024. Huntingdon currently remains a higher

²⁸ The increase in the 2024 Forecast of MCRA Other Revenue compared to previous years is because 2024 is a leap year, i.e., \$346.617 per MMcfd x 105 MMcfd x 366 days / 1,000,000 = \$13.320 million.

1 priced market than Kingsgate, thus supporting east to west movement across SCP during the
2 summer rather than west to east flow. Therefore, FEI forecasts generating no west to east
3 mitigation revenue in 2024.

4 **5.4 LNG CAPACITY ASSIGNMENT**

5 The \$18.039 million in LNG capacity assignment Other Revenue shown in Table 5-1 above
6 represents a transfer of costs from the delivery margin to gas costs reflecting the allocation of a
7 portion of the Mt. Hayes LNG facility costs to gas costs.

8 The Mt. Hayes cost allocations were reviewed during the FEI 2016 Rate Design Application
9 proceeding. The BCUC approved FEI's proposal to continue to allocate costs based on the Mt.
10 Hayes LNG facility having a dual purpose serving as a gas supply storage facility and as a
11 transmission facility providing additional transmission system capacity.²⁹

12 **5.5 SUMMARY**

13 FEI has forecast the Other Revenue components for 2024 reflecting all applicable contracts and
14 fixed revenues, and based on the Company's best knowledge of the factors that drive the
15 variable components. Variances in Other Revenue are recorded in the SCP Mitigation
16 Revenues Variance Account (for variances in the items discussed in Section 5.3), the
17 Biomethane Variance Account (for variances in the items discussed in Section 5.2.6), the
18 CNG/LNG Recoveries deferral account (for excess revenue from the CNG & LNG Service
19 Recoveries forecast discussed in Section 5.2.5.3), and the Flow-through deferral account (for
20 any remaining variances from forecast in Section 5.2.5.3 and all variances from forecast in
21 Section 5.2.5.2 and 5.4). All remaining variances in Other Revenue, with the exception of the
22 one-time Tilbury insurance recoveries which are being returned 100 percent to customers
23 through the Flow-through deferral account (as discussed in Section 5.2.4), are shared with
24 customers through the ESM.

²⁹ The cost allocation for the Mt. Hayes LNG facility was approved pursuant to Order G-4-18 and the Reasons for Decision attached as Appendix A, both dated January 9, 2018.

6. O&M EXPENSE

6.1 INTRODUCTION AND OVERVIEW

Under the MRP, FEI's O&M expense is primarily determined by formula, with the addition of a number of items that are forecast outside the formula on an annual basis.

In 2024, the Formula O&M is \$312.561 million, representing a 4.4 percent increase from the 2023 Formula O&M, primarily driven by the net inflation factor. For the O&M expenses tracked outside of the formula (i.e., Forecast O&M), the 2024 forecast is \$57.646 million, representing a 4.2 percent increase from the amount approved for 2023. Overall, the increase in gross O&M expense from 2023 Approved to 2024 Forecast is 4.4 percent.

The components of 2024 O&M expense are shown in Table 6-1 below.

Table 6-1: 2024 O&M Expense (\$ millions)

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024	Reference
1	Formula O&M	\$ 299.302	\$ 299.302	\$ 312.561	Section 11, Schedule 20, Line 12
2	Forecast O&M	55.345	57.931	57.646	Section 11, Schedule 20, Line 23
3	Total Gross O&M	354.647	357.233	370.207	Line 1 + Line 2
4	Capitalized Overhead (16%)	(56.744)	(56.744)	(59.233)	Section 11, Schedule 20, Line 27
5	Biomethane O&M transferred to BVA	(5.237)	(5.075)	(5.817)	Section 11, Schedule 20, Line 26
6	Net O&M	\$ 292.666	\$ 295.414	\$ 305.157	Line 3 through 5

In the sections below, FEI provides further details on its formula and forecast O&M expenses for 2024. Additionally, in compliance with the BCUC's directive in the MRP Decision³⁰, FEI provides information related to its System Operations, Integrity and Security expenditures in Subsection 6.2.1.

6.2 FORMULA O&M EXPENSE

The formula-driven portion of O&M starts from the prior year's Approved Base O&M per Customer (UCOM), escalated by the prior year's inflation less a productivity improvement factor of 0.5 percent, and then multiplied by 75 percent of the forecast growth in average customers, resulting in the current year inflation-indexed O&M before true-up. A true-up of formula O&M based on actual average customers from two years prior is then added to the current year inflation-indexed O&M.

As calculated in Section 2, the 2024 inflation based on prior year's BC-CPI and BC-AWE, less the productivity improvement factor, is 3.854 percent.

For 2024, the annual operating and maintenance expense under the formula is calculated as:

³⁰ MRP Decision, p. 115.

1 **Table 6-3: System Operations, Integrity and Security New/Incremental Spending (\$ millions)**

Line No.	Description	2022 Formula O&M	Actual 2022 O&M	2022 Forecast/Actual Variance	Cumulative Forecast/Actual Variance ²
1	Integrity Management	\$ 1.475	\$ 1.986	\$ 0.511	\$ 1.182
2	Maintaining System Infrastructure	\$ 0.765	\$ 0.857	\$ 0.092	\$ 0.156
3	Operations, Compliance and Safety	\$ 0.655	\$ 0.609	\$ (0.047)	\$ 0.334
4	Cyber Security	\$ 0.555	\$ 0.855	\$ 0.300	\$ 0.910
5	Data Analytics	\$ 0.328	\$ 0.100	\$ (0.228)	\$ (0.851)
6	Gas Control	\$ 0.710	\$ 0.103	\$ (0.607)	\$ (1.824)
7	CEPA Participation	\$ 0.765	\$ 0.416	\$ (0.348)	\$ (1.094)
8	Other	\$ -	\$ -	\$ -	\$ -
2	9 Total	\$ 5.252	\$ 4.925	\$ (0.327)	\$ (1.188)

3 Notes to table:

4 ¹ 2022 Formula O&M is the approved 2021 formula for incremental funding with Net Inflation factor applied
5 (3.420%).

6 ² Cumulative Forecast/Actual variance is the 2020, 2021 and 2022 Actual variance.

7 For the first three years of the MRP, FEI spent \$1.188 million less than the formula amount.
8 Total actual spending in 2022 was \$4.925 million, which is \$0.327 million lower than the 2022
9 Formula O&M amount. Areas with notable variances in 2022 include integrity management,
10 cyber security, data analytics, gas control and CEPA participation.

11 For integrity management, FEI spent \$0.511 million more than the formula amount for pipeline
12 right-of-way activities, crossing assessments, and increased engineering technical studies (i.e.,
13 general studies, geohazard and seismic inspections and assessments) for maintaining the
14 integrity of the pipeline delivery system.

15 Higher spending for cyber security of \$0.300 million was for additional consulting resources in
16 the following areas: an additional consulting resource to augment cybersecurity requirements
17 due to additional threat management needs; emergency management consulting for emergency
18 exercises; physical security threat intelligence services to manage security risks; and the use of
19 consulting services to update the business continuity program.

20 Offsetting the higher costs in integrity management and cybersecurity was the lower spending in
21 data analytics, gas control and CEPA participation.

22 With regard to data analytics, FEI spent \$0.228 million less than the formula amount in 2022
23 primarily due to a delay in hiring. In 2022, FEI focused on building solutions in business areas,
24 including providing enhanced reporting using dashboards. For further details on data analytics,
25 please refer to Section 1.4.2 of the Application. While no expenditures for additional staffing
26 were incurred in 2022, incremental expenditures of approximately \$100 thousand were incurred
27 for an external change management consulting resource to support the development of the
28 Enterprise Data and Analytics System (EDAS) requirements.

1 For gas control, FEI spent \$0.607 million less than the formula amount in 2022. As explained in
 2 the Annual Review for 2023 Delivery Rates,³¹ FEI hired one gas controller in 2021 and had
 3 intended to hire one net new gas controller per year going forward. However, FEI was unable to
 4 hire another net new gas controller in 2022 due to a combination of recruitment challenges, staff
 5 turnover, and coordinating the timing of new hires with retirements of existing employees. Hiring
 6 gas controllers is challenging as it is difficult to locate candidates with appropriate experience
 7 and skills within BC, particularly due to the high-cost housing market in the Lower Mainland and,
 8 to varying extents, in FEI's other operating territories. FEI continues to strive to increase its gas
 9 control staffing to ensure the utility will be able to meet the requirements of its customers, align
 10 with industry standards, and continue to operate in a safe and reliable manner within a
 11 progressively complex and demanding operational environment.

12 With regard to CEPA participation, FEI spent \$0.348 million less than the formula amount in
 13 2022. As noted in the 2023 Annual Review, CEPA has ceased operations; however, the work
 14 related to CEPA-driven activities continues. In 2022, FEI continued with implementing control
 15 room management improvements and activities for Integrity First self-assessments.

16 **6.3 O&M EXPENSE FORECAST OUTSIDE THE FORMULA**

17 In addition to FEI's formula O&M, FEI forecasts a number of O&M items outside of the formula
 18 annually, including pension and OPEB expense, insurance, integrity, BCUC levies, and O&M
 19 supporting Clean Growth initiatives, as well as any exogenous factors. These amounts are
 20 shown in Table 6-4 below along with a comparison to 2023.

21 **Table 6-4: 2024 Forecast O&M (\$ millions)**

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024
1	Pension/OPEB (O&M Portion)	\$ 9.577	\$ 9.577	\$ 2.555
2	Insurance	12.242	12.406	13.328
3	Integrity O&M	8.000	9.000	11.200
4	BCUC Levies	8.493	8.493	9.955
5	Clean Growth Initiatives:			
6	Biomethane O&M	5.237	5.075	5.817
7	Renewable Gas Development	2.000	3.069	4.052
8	NGT O&M	1.937	2.412	2.604
9	Variable LNG Production Costs	7.859	7.899	8.135
10	Forecast O&M	\$ 55.345	\$ 57.931	\$ 57.646

22
 23 Each of the items that is forecast outside of the formula is discussed below. Variances in
 24 pension and OPEB expenses are captured in the Pension and OPEB Variance deferral account
 25 and amortized into rates over a three-year period, as approved by the BCUC in Order G-138-14.

³¹ FEI Annual Review for 2023 Delivery Rates, Exhibit B-2, p. 43.

1 Variances in BCUC fees are captured in the BCUC Levies Variance deferral account and
2 amortized into rates in the subsequent year. Variances in insurance, integrity, Clean Growth
3 initiatives and exogenous factors are captured in the Flow-through deferral account.

4 **6.3.1 Pension and OPEB Expense**

5 Pension and OPEB expense for 2024 is based upon actuarial estimates using a range of
6 assumptions as of December 31, 2022. In addition to O&M, pension and OPEB expense is
7 embedded in Capital Expenditures, Asset Removal Costs, and Core Market Administration
8 Expense (CMAE) categories, as shown in Table 6-5.

9 **Table 6-5: Pension and OPEB Expense (\$ millions)**

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024
1	O&M	\$ 9.577	\$ 9.577	\$ 2.555
2	Capital - Growth	1.034	1.034	0.871
3	Capital - Other	3.045	3.045	2.566
4	Deferred - Asset Removal Costs	1.201	1.201	1.012
5	Deferred - CMAE	0.363	0.363	0.306
6	Total	\$ 15.220	\$ 15.220	\$ 7.310

10
11 The variance between the 2023 Approved/Projected and actual pension and OPEB expense is
12 included in the Pension and OPEB Variance deferral account and amortized into rates over a
13 three-year period, as approved by Order G-138-14.

14 The 2024 Forecast pension and OPEB expense is lower than 2023 Approved by \$7.910 million.
15 The difference is primarily due to the following factors:

- 16 • A decrease of approximately \$7 million due to an increase in investment returns as a
17 result of a higher balance of pension plan assets; and
- 18 • A decrease of approximately \$5 million due to a reduction in current service costs as
19 well as a higher amortization of actuarial gains, both of which are primarily the result of a
20 higher discount rate. The discount rate, which is determined with reference to the market
21 rate of interest on high-quality debt instruments at a point in time, increased from 4.50
22 percent, which was used to determine the 2023 Approved expense, to 5.25 percent,
23 which is used to determine the 2024 Forecast expense.

24 The above decreases are offset in part by:

- 25 • An approximate increase of \$4 million in interest costs due to the increased discount
26 rate.

6.3.2 Insurance Expense

Insurance expense relates to the insurance premium expense allocated to FEI by Fortis Inc. as set out in Table 6-6 below.

Table 6-6: Insurance Expense (\$ millions)

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024
1	Insurance Premiums	\$ 12.242	\$ 12.406	\$ 13.328

FEI's annual insurance renewal occurs in July of each year. The 2023 Projected insurance premium expense of \$12.406 million is \$0.164 million higher than 2023 Approved, as it incorporates the first six months of FEI's actual July 2023 to June 2024 insurance renewals. The 2024 Forecast is \$13.328 million, which is an increase of \$0.922 million from 2023 Projected. The 2024 Forecast is calculated based on the six months of actual annual insurance premiums from July 2023 to June 2024 of \$6.501 million and applying a 5 percent increase for the remaining six months.³²

6.3.3 Integrity O&M

In the MRP Decision and Order G-165-20,³³ the BCUC approved the treatment of integrity digs as a flow-through item with variances between forecast and actual amounts captured in the Flow-through deferral account. Further, consistent with the 2023 Approved integrity O&M included in the 2023 Annual Review and as approved in the MRP Decision,³⁴ FEI has included the incremental expenditures related to the two integrity-driven CPCN projects which have been approved subsequent to the commencement of the MRP term – the Inland Gasline Upgrades (IGU) Project and the Coastal Transmission System Transmission Integrity Management Capabilities (CTS TIMC) Project.

The 2024 Forecast for integrity digs and incremental integrity activities is \$11.2 million, which is an increase of \$3.2 million from 2023 Approved and \$2.2 million from 2023 Projected. The 2024 Forecast includes approximately \$10.2 million for integrity digs and \$1 million for incremental integrity activities related to the IGU and CTS TIMC Projects. The 2024 Forecast for the incremental integrity activities is consistent with 2023 Approved and 2023 Projected. Each of these areas is discussed below.

6.3.3.1 Integrity Dig Expenditures

FEI provides the following update and forecast of its integrity dig expenditures.

³² \$13.002 million/2 = \$6.501 million x 1.05 = \$6.826 million. \$6.501 million + \$6.827 million = \$13.328 million.

³³ MRP Decision and Order G-165-20, p. 74.

³⁴ MRP Decision and Order G-165-20, pp. 132-133.

1 Table 6-7 below provides the forecast number of integrity digs with Reason for Dig categories
 2 as well as the total cost and cost per dig. The table identifies integrity digs associated with inline
 3 inspection (ILI) activities (lines 1 to 3), and digs resulting from other reasons (lines 4 and 5).
 4 Each of the drivers for integrity digs have significant uncertainty with respect to the number and
 5 cost of integrity digs that continues to support the Flow-through treatment of these costs. A
 6 discussion of each Reason for Dig follows the table.

7 **Table 6-7: Integrity Digs – Activities and Expenditures**

Line No.	Reason for Digs	Number of Digs per Year					
		2020 Actuals	2021 Actuals	2022 Actuals	2023 Approved	2023 Projected	2024 Forecast
1	ILI Digs – New Tool(s): ILI digs attributed or projected due to an inspection with an ILI technology or ILI tool that has not been previously run in a given pipeline segment.	27	13	32	50	36	85
2	ILI Digs – New Practice(s): ILI digs attributed or projected due to changes to industry practices or standards (e.g., strain-based criteria for dent digs) requiring a corresponding change from FEI's past integrity dig practices.	47	25	15	30	40	30
3	ILI Digs – Established Tools and Practices: ILI digs identified through previously established technologies, tools, and practices	45	87	68	40	61	35
4	Non-ILI Digs: Digs identified through above-ground cathodic protection and coating surveys.	27	17	12	20	27	10
5	Facilities Digs: Digs identified on piping within facilities (e.g., control stations, regulator stations, compressor stations) through assessment of available design, construction, operations, and maintenance information.	0	0	1	5	2	2
6	Total Integrity Digs	146	142	129	145	166	162
7	Total Integrity Dig Expenditures (\$ millions)	5.9	7.2	6.2	7.0	8.0	10.2
8	Cost per dig (\$000s)	40	51	48	48	48	63

8

1 FEI's forecast of **ILI Digs – New Tools** is an estimate of the integrity digs resulting from first-
2 time in-line inspections, such as those associated with the IGU Project³⁵ and CTS TIMC
3 Project.³⁶ As there is no sufficient technical basis for estimating the number of digs from a first-
4 time in-line inspection, FEI has based its projections on the engineering judgement of qualified
5 staff, which is informed by various information sources, including:

- 6 • Knowledge of populations of imperfections from other in-line inspected pipelines, while
7 recognizing that one pipeline's condition is not an accurate predictor of another
8 pipeline's condition;
- 9 • Knowledge of imperfections that the IGU Project is endeavouring to locate and remove
10 prior to in-line inspection to ensure passage of ILI tools (e.g., inside diameter restrictions,
11 such as could be caused by a severe dent); and
- 12 • Estimates of timing of in-line inspection activities, with a primary input being the timing of
13 IGU and CTS TIMC Project activities to prepare pipelines for running ILI tools.

14 In this category, FEI is forecasting EMAT-driven integrity digs on the Huntingdon-Roebuck 1067
15 mm pipeline in 2024 as part of its CTS TIMC post-Project activities. Integrity digs on this 1067
16 mm outside-diameter pipeline traversing higher-developed areas are forecast to be higher-cost
17 than digs on smaller-diameter pipelines that traverse lesser-developed areas, which is
18 influencing the 2024 Forecast of total integrity dig expenditures and the 2024 Forecast of cost
19 per dig.

20 FEI's forecast related to **ILI Digs – New Practices** continues to be influenced by the adoption of
21 the strain-based criteria for dents as per current industry practice and standards. FEI's 2023
22 Projection and 2024 Forecast incorporates FEI's analysis to-date, with the increase from 2023
23 Approved to 2023 Projected also reflecting ILI data received since the initial estimate was
24 developed. FEI is still in the process of adopting a modified dent repair method.

25 FEI's forecast of **ILI Digs – Established Tools and Practices** results from FEI's analysis of its
26 existing technology tool runs, which are currently scheduled on a maximum seven-year interval
27 but may vary from year to year. As other tool technologies (e.g., EMAT) become established
28 and included in a similar re-run schedule, FEI's estimates of ongoing ILI digs will also include
29 integrity digs identified through those tools. The 2023 Projected and 2024 Forecast incorporate
30 FEI's analysis to-date (i.e., ILI and integrity dig results), while also fluctuating due to influences
31 including the number and timing of in-line inspections. The 2023 Projected is higher than 2023
32 Approved due to the need to investigate site-specific issues that were not known at the time of
33 the initial estimate, as well as to minimize landowner disruption and optimize operating costs.
34 For example, three digs were advanced from future years since they were in proximity to 2023
35 digs and could be completed with less landowner disruption if they were performed concurrent
36 with the 2023 digs. An additional three digs were advanced from a future year as installation of

³⁵ FEI Application for a CPCN for the IGU Project Decision and Order G-12-20.

³⁶ FEI Application for a CPCN for the CTS TIMC Project Decision and Order C-3-22.

1 a berm to mitigate a geotechnical hazard will make future integrity dig access more complex
2 and costly.

3 FEI's forecast of **Non-ILI Digs** reflects assessments of transmission pipelines for which in-line
4 inspection tools are not currently proven, commercialized, and adopted and hence are identified
5 through other methods (such as cathodic protection surveys). The number of these digs is
6 expected to vary depending on the survey results from the previous year(s) and timing of
7 surveys, as reflected by a reduction in the 2024 Forecast. The 2023 Projected amount
8 incorporates incremental condition monitoring of the Trail Lateral 168 following a leak in
9 December 2022.

10 FEI's forecast of **Facilities Digs** reflects FEI's expansion of its Integrity Management Program
11 (IMP) to include facilities (e.g., compressor stations and control stations). Consistent with its
12 current practices for assessing linear pipeline assets, this category of digs includes underground
13 piping within facilities that is capable of failure by rupture, but is not capable of ILI inspection.
14 The 2023 Projected amount shows a reduction in the number of digs; however, Facilities digs
15 can encompass relatively longer lengths of pipe at a single site (relative to typical digs on linear
16 pipeline assets). FEI is forecasting that its two 2023 Facilities Digs will inspect approximately 50
17 metres of facilities piping at two facility sites, prioritized on the basis of factors including
18 construction (e.g., age, expected external coating) and operating characteristics (e.g., station
19 criticality, operating stress). FEI is anticipating a similar level of activity in 2024.

20 FEI continues to experience a range of scope and costs associated with its integrity digs.
21 Factors that impact dig costs include site access, site management during the dig, site
22 restoration, and pipeline repairs (if necessary). The 2023 Projected and 2024 Forecast reflect
23 estimates developed by Transmission Operations staff, and consider the average cost to
24 complete similar integrity digs, as well as utilizing knowledge and/or estimates of future costs,
25 such as those associated with contractors or equipment. The similarities, decreases or
26 increases in FEI's average costs per dig from 2021 through 2024 are not indicative of trends;
27 rather, fluctuations in average costs will occur due to year-to-year variability in dig categories
28 and the geographic locations of the digs. The estimates reflect Operations' understanding of
29 cost pressures, including fuel and contractors.

30 **6.3.3.2 CPCN-related Integrity Expenditures**

31 FEI is forecasting a total of \$1 million in integrity management costs in 2024 due to incremental
32 integrity-related activities such as ILI data collection and analysis (as a result of the ongoing IGU
33 Project), and development of a sustainable quantitative risk assessment process (QRA) for
34 FEI's transmission pipelines (as identified in the CTS TIMC Project CPCN application).

35 **6.3.3.2.1 IGU PROJECT**

36 In 2020, the BCUC approved a CPCN for the IGU Project (Order G-12-20). This project includes
37 system modifications to allow for ongoing ILI of 11 laterals, pipeline replacement for 4 laterals,

1 and installation of a pressure regulating station for 14 laterals.³⁷ Incremental operating costs are
2 associated with both the ongoing ILI activities and pressure regulating station aspects of the
3 project.

4 For 2024, FEI is continuing to forecast \$0.300 million for incremental O&M resources associated
5 with the IGU Project, consistent with 2023 Approved and 2023 Projected levels. These costs are
6 primarily for engineering analysis of ILI data as well as planning and implementing operational
7 responses (such as identifying future integrity digs, or other monitoring activities).

8 **6.3.3.2.2 CTS TIMC PROJECT**

9 In 2022, the BCUC approved a CPCN for the CTS TIMC Project (Order C-3-22). This project is
10 providing the ongoing ability to run crack-detection EMAT ILI tools in 11 CTS pipelines, as well
11 as the installation of a pressure regulating station on a single segment of one of the pipelines
12 where crack-detection ILI is not possible.

13 As discussed in the CTS TIMC CPCN application, FEI is also establishing a sustainable and
14 ongoing process to allow FEI to conduct ongoing QRAs on its transmission pipelines. FEI has
15 procured software for performing QRAs (these costs were included in the approved Information
16 Systems capital budget) and is initiating its ongoing QRA activities with internal staff. FEI's
17 implementation of QRA of its transmission pipelines is an iterative process, as the data and
18 learnings from previous steps inform the next steps in FEI's integrity planning.

19 FEI is continuing to define further resources for enhancing its risk-informed and risk-based
20 decision-making of its transmission pipelines, which will include incremental technical staff for
21 performing ongoing analysis of each of FEI's three transmission systems (the Coastal, Interior
22 and Island transmission systems) and enhanced capabilities for ensuring that suitable and
23 validated data inputs are fed into the risk model.

24 For 2024, FEI is continuing to forecast \$0.700 million in incremental O&M, consistent with 2023
25 Approved and 2023 Projected levels, which is primarily associated with initial engineering
26 resources for performing ongoing QRAs.

27 **6.3.4 BCUC Levies**

28 FEI's 2024 Forecast for BCUC levies is \$9.955 million. The 2024 Forecast is based on Order G-
29 134-23 for the BCUC's Fiscal 2023/24 year, which represents the best information available at
30 this time, as the BCUC levy calculation for Fiscal 2024/25 will not be available until early or mid
31 2024.

32 BCUC levies receive flow-through treatment, with annual variances between actual and forecast
33 amounts in O&M expense being recorded in the BCUC Levies Forecast Variance deferral
34 account and amortized over one year.

³⁷ Decision and Order G-12-20, Section 5.1, Table 3, p. 25.

1 **6.3.5 Clean Growth Initiative - Biomethane O&M**

2 A summary of the Biomethane O&M, by project, is provided in Table 6-8 below:

3 **Table 6-8: Biomethane O&M by Project (\$ millions)**

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024
1	Program Overhead	2.648	3.880	3.986
2	City of Surrey	0.010	0.016	0.017
3	Kelowna	0.512	0.703	0.745
4	Salmon Arm	0.200	0.268	0.283
5	Fraser Valley Biogas	0.012	0.013	0.013
6	Seabreeze Farms	0.012	0.013	0.013
7	Lulu Island WWTP	0.012	0.013	0.013
8	Dickland Farms	0.012	0.013	0.013
9	City of Vancouver	0.340	-	0.572
10	REN Energy	-	0.013	0.013
11	Capital Regional District	0.004	0.013	0.013
12	Net Zero Waste	0.009	-	-
13	Delta RNG (MAS Energy)	1.467	0.133	0.133
14	Total Biomethane O&M	5.237	5.075	5.817

4
5 The 2023 Projected Biomethane O&M is lower than 2023 Approved. This is due to lower than
6 forecast O&M for various projects, including the City of Vancouver (COV) and Delta RNG (MAS
7 Energy) projects. The lower projected O&M for the Delta RNG project is due to a delay by the
8 supplier in the start-up of the project. These decreases are partially offset by an increase in
9 program overhead which is primarily due to increased costs related to staffing, legal fees for
10 new biomethane agreements, increased costs for customer awareness, and development costs
11 for new in-Province projects.

12 For 2024, FEI is forecasting the Biomethane O&M to be \$5.817 million, which is \$0.742 million
13 higher than the 2023 Projected level. The increase is primarily due to the additional operation
14 costs for the COV biomethane production project at approximately \$0.572 million, which is
15 expected to be in service in 2024.

16 As approved by Order G-133-16, Biomethane O&M is transferred to the Biomethane Variance
17 Account (BVA). The net-of-tax year-end BVA balance, after adjustment for the value of unsold
18 biomethane quantities, is amortized/transferred to the BVA Rate Rider Account for recovery
19 from, or refund to, all non-bypass customers via the BVA Rate Rider in the subsequent year, as
20 described further in Section 10.3.1.

6.3.6 Clean Growth Initiative – Renewable Gas Development

Table 6-9: Renewable Gas Development O&M (\$ millions)

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024
1	Renewable Gas Development	2.000	3.069	4.052

Since the commencement of the current MRP term, government policies and regulations regarding climate action have continued to progress, re-enforcing the need to prepare FEI's system for the introduction of hydrogen, lignin and synthesis gas as energy options. The GGRR was amended in May 2021 to include hydrogen, synthesis gas and lignin as low carbon fuels. In October 2021, the Province announced in its CleanBC update that it is targeting a 47 percent reduction in GHGs in building and industry by 2030, to be implemented through a Greenhouse Gas Reduction Standard (GHGRS). These policy initiatives will expand the resources that are required to support renewable gas development and FEI continues to progress, in a measured way, various activities to enable the introduction of these energy options into its system. The increased costs for renewable gas development reflect this increased work. For 2023 and 2024, FEI expects to continue to progress potential opportunities to develop the supply and use of hydrogen, lignin, and syngas, including the following:

- Advancing technical and non-technical activities to evaluate the feasibility of pursuing the development of facilities to produce renewable and low-carbon hydrogen, including production technology and project applications, project economics, joint venture opportunities, and offtake requirements on several different hydrogen supply opportunities;
- Evaluating several third-party hydrogen and lignin offtake supply opportunities; and
- Continuing a broad-based program of feasibility and system readiness assessments to distribute hydrogen, end-use impacts, workforce training, and customer and stakeholder education that will enable the safe distribution and customer end-use of hydrogen.

The 2023 Projected expenditures are approximately \$3.069 million, which is an increase of \$1.069 million from 2023 Approved. The 2023 Projected O&M costs include \$1.25 million in internal labour resources (consistent with the amount included in 2023 Approved) as well as increased costs for the use of external consultants to successfully execute on planned activities to meet business goals and objectives. FEI engaged external contractors and professional service providers to provide additional multi-disciplined and specialized resources to assist FEI internal resources with various activities and projects, as described below. The 2023 Projected expenditures include \$1.8 million for work related to requirements to continue progressing the ongoing hydrogen development activities on supply acquisition, offtake and end-use feasibility, safety, codes and standards, feasibility, and business development. Actual expenditures in 2023 may vary from that projected depending on the timing of contractor awards and completion of work scope activities and deliverables.

1 The 2024 Forecast is \$4.052 million, which represents an approximately \$0.983 million increase
2 from 2023 Projected, and is related to requirements to continue work to progress feasibility,
3 safety, codes and standards, and business development. The 2024 Forecast includes an
4 increase in labour costs to approximately \$1.4 million for one incremental resource and an
5 increase in non-labour costs to approximately \$2.6 million. The main drivers for the increase in
6 non-labour costs are related to the activities and projects described below. FEI expects the
7 Renewable Gas Clean Growth Initiative to be an area that will continue to grow as FEI's supply
8 of renewable gas increases to meet provincial targets.

9 FEI is undertaking the following specific activities and projects related to the development of
10 hydrogen and lignin which require increased non-labour resources in 2023 and 2024.

11 **Hydrogen Production Supply Opportunities – 2023 Projected and 2024 Forecast**
12 **Non-Labour Resource Activities to Progress Production Project Preliminary**
13 **Feasibility:**

- 14 • 2023 – continue feasibility evaluation of various hydrogen production facility
15 development opportunities in FEI's Interior and Lower Mainland service areas. Review
16 potential policy, regulatory and permitting requirements to offtake hydrogen from the
17 production facilities, including distribution in the natural gas distribution system, or supply
18 hydrogen directly to industrial customers other than through the natural gas distribution
19 system to replace natural gas.
- 20 • 2024 – continue progress from 2023 with goal to reach Final Investment Decision on a
21 commercial pilot.

22 **Hydrogen Offtake Supply Opportunities – 2023 Projected and 2024 Forecast Non-**
23 **Labour Resource Activities to Progress Procurement Feasibility:**

- 24 • 2023 – continue evaluation of several potential third-party proposals that are considering
25 developing projects to produce clean hydrogen for supply to offtakes such as FEI.
26 Review regulatory and permitting requirements to offtake hydrogen from third-party
27 production facilities for distribution in the natural gas distribution system, or supply
28 hydrogen directly to industrial customers other than through the natural gas distribution
29 system to replace natural gas.
- 30 • 2024 – continue from 2023 with goal to advance one opportunity to definitive agreement.

31 **Lignin Offtake Supply Opportunities – 2023 Projected and 2024 Forecast Non-**
32 **Labour Resource Activities to Progress Procurement Feasibility:**

- 33 • 2023 – continue to evaluate a potential third-party supplier that is considering developing
34 a project to produce lignin from black liquor which would be used by the industrial
35 customer to replace, in part, natural gas used at the site. Review policy, regulatory and
36 permitting requirements for energy measurement and billing to support the commercial

1 transaction and develop draft commercial and legal requirements for a lignin supply
2 agreement.

- 3 • 2024 – continue from 2023 with goal to advance one opportunity to definitive agreement.

4 **Hydrogen Distribution and Customer End-Use Service – 2023 Projected and 2024** 5 **Forecast Non-Labour Activities to Progress Gas System Hydrogen Readiness** 6 **Assessment and Conversion:**

- 7 • 2023 – FEI intends to select a preferred vendor and negotiate a contract to award the
8 project to determine the overall requirements to distribute hydrogen in the gas system,
9 address any end-use impacts, and customer and stakeholder education that will enable
10 the safe distribution and customer end-use of hydrogen. The intent of the project is to
11 enable hydrogen blending initially at relatively low percentage blend levels and increase
12 the blend percentage over time in line with the provincial regulatory approval
13 requirements.
- 14 • 2024 – FEI expects to commence the project in the first half of 2024 and it will run for a
15 number of years.

16 **Concurrent Hydrogen Development Enabling Initiatives – 2023 Projected and** 17 **2024 Forecast Non-Labour Resource Activities to Achieve Progress:**

- 18 • 2023 and 2024 – continue progressing various concurrent activities including workforce
19 education and training initiatives, engaging with technical regulators in BC, Canadian
20 Standards Association (CSA), Canadian Gas Association, NRCAN, and various other
21 authorities having jurisdiction regarding various initiatives on hydrogen safety, codes and
22 standards.

23 **Hydrogen Demonstration Pilot Projects – 2023 Projected and 2024 Forecast Non-** 24 **Labour Resource Activities to Progress Preliminary Feasibility:**

- 25 • 2023 and 2024 – continue to progress from preliminary feasibility to more detailed
26 feasibility and project development for hydrogen blending projects that would blend
27 hydrogen into a relatively small, isolated section of FEI's distribution system in the
28 Interior and the Lower Mainland. Also continue engaging with multiple collaborators to
29 advance preliminary feasibility and project definition for a hydrogen blending project that
30 would blend hydrogen to replace natural gas use at an industrial site on Vancouver
31 Island.

32 **6.3.7 Clean Growth Initiative - NGT O&M**

33 NGT O&M is comprised of O&M expenses related to the operation of the FEI-owned CNG and
34 LNG fuelling stations and FEI-owned LNG tankers available for rental to LNG customers.
35 Table 6-10 below summarizes the NGT O&M.

1 **Table 6-10: NGT O&M (\$ millions)**

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024
1	CNG Stations	0.980	1.352	1.531
2	LNG Stations	0.272	0.319	0.323
3	LNG Tankers	0.615	0.670	0.680
4	Emergency Response and Preparedness (ERAP)	0.070	0.070	0.070
2	5 Total NGT O&M	1.937	2.412	2.604

3 The 2023 Projected O&M expense is \$0.475 million higher than the 2023 Approved. This is
4 primarily due to a projected increase in CNG load at the GFL Environmental Inc. Fuelling
5 Station located in Abbotsford to the end of 2023.³⁸

6 The 2024 Forecast NGT O&M expense is \$0.192 million higher than the 2023 Projected
7 amount, primarily due to an expected increase in CNG load at the Annacis Island Fuelling
8 Station.

9 **6.3.8 Clean Growth Initiative - Variable LNG Production Costs**

10 For the MRP, LNG O&M costs are allocated between formula and forecast (flow-through) O&M
11 based on whether they are fixed or variable costs. Fixed costs represent the fixed costs to
12 operate the LNG plant, regardless of its use (for peak shaving storage, or LNG production for
13 sales). The remaining portion of total LNG O&M costs is treated as flow-through outside of
14 formula O&M. These costs represent the variable costs for the production of LNG (liquefaction
15 of natural gas, the dispensing of LNG, the handling and loading of tankers with LNG, etc.) where
16 the costs fluctuate and are dependent on sales volumes.

17 A table breaking out the various components of the Variable LNG Production Costs is provided
18 below.

³⁸ Increasing throughput at CNG stations will increase the runtime of the compressors as well as other equipment at the station, resulting in an expected increase in O&M expenses.

1 **Table 6-11: Variable LNG Production O&M (\$ millions)**

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024
1	<u>Tilbury Plant:</u>			
2	Labour	1.775	2.253	2.339
3	Materials	0.794	0.600	0.623
4	Contractor	0.637	0.230	0.239
5	Power	3.634	3.826	3.909
6	Fees and Employee Expenses	0.332	0.186	0.193
7	Sub-total	7.172	7.095	7.304
8	<u>Mt. Hayes Plant</u>			
9	Labour	0.339	0.360	0.374
10	Materials	0.028	0.025	0.026
11	Contractor	0.060	0.183	0.190
12	Power	0.261	0.236	0.241
13	Fees and Employee Expenses	0.000	0.000	0.000
14	Sub-total	0.687	0.804	0.831
15	Total O&M	7.859	7.899	8.135

2
3 The Variable LNG Production O&M expense required for operation of the expanded Tilbury
4 LNG facility³⁹ and the Mt. Hayes LNG facility consists of variable labour, materials, certain
5 contractor costs, power to run the plants, and employee expenses for the employees included in
6 variable labour, as set out in the MRP Application (page C-25). The definition of variable costs
7 was also outlined in the response to BCUC IR2 173.4 as part of the MRP proceeding.

8 Included in the variable labour is the following: LNG operators for truck loading and shunting of
9 LNG; millwrights and electrical and instrumentation technicians to support production-related
10 maintenance activities; and operations management personnel to oversee activities. The 2023
11 Projected variable labour is higher than 2023 Approved, as additional new hires to support LNG
12 loading are expected to contribute to higher labour costs. Labour costs are also expected to
13 increase to reflect the full cost of staffing and labour required. The increase in the 2024 Forecast
14 compared to 2023 Projected is due to salary increases.

15 The materials costs are for materials related to the production of LNG. In 2023, expenditures
16 are projected to be slightly lower compared to the 2023 Approved. In 2024, compared to 2023
17 Projected, materials costs are expected to increase due to inflation.

18 Contractor costs are for variable contractor services used for truck loading and support of
19 production related activities. For Tilbury, the contractor costs in 2023 are projected to be lower
20 than the 2023 Approved level based on the anticipated work for the year. FEI expects contractor
21 services at Tilbury for 2024 will be consistent with the 2023 Projected level. For Mt. Hayes, the
22 contractor costs are projected to be higher than the 2023 Approved level. The increase is

³⁹ The expanded LNG facility includes the Phase 1A facilities defined in Direction No. 5 to the BCUC, B.C. Reg. 245/2013, as amended by B.C. Reg. 265/2014.

1 primarily due to increased road maintenance and snow removal work on the gravel road leading
2 to and from the plant for improving safety and driving conditions for LNG tankers. FEI expects
3 the contractor costs at Mt. Hayes in 2024 will be similar to the 2023 Projected level plus
4 inflation.

5 Other variable costs include power (i.e., electricity) costs and consumables. Electricity costs
6 vary with production. The 2023 Approved electricity costs were forecast based on approximately
7 1.5 PJ of LNG sales, which was a conservative estimate as it did not include all forecast LNG
8 sales at the time of the 2023 Annual Review due to the uncertainty of non-NGT LNG exports.
9 The 2023 Projected electricity costs are based on 2.1 PJ of LNG sales, resulting in higher
10 electricity costs when compared to 2023 Approved. The 2.1 PJ of LNG sales includes
11 approximately 1.5 PJ of NGT LNG sales and approximately 0.6 PJ of non-NGT LNG exports.
12 The electricity costs associated with the non-NGT LNG exports included in the 2023 Projected
13 amount are based on six months of actual non-NGT LNG sales volumes in 2023. For 2024, FEI
14 continues to use 2.1 PJ of LNG sales to forecast electricity costs but assumes higher electricity
15 rates from BC Hydro, with an increase of approximately 2 percent. Actual electricity costs will
16 vary depending on the demand for LNG exports. Please refer to Section 3.3.4 of the Application
17 for further discussion.

18 **6.4 NET O&M EXPENSE**

19 Net O&M expense is Gross O&M less capitalized overhead and Biomethane O&M transferred to
20 the BVA. As approved by Order G-165-20, the capitalized overhead rate is set at 16 percent for
21 FEI. After capitalized overhead and the transfer of \$5.817 million of Biomethane O&M to the
22 BVA, the net O&M expense for 2024 is \$305.157 million.

23 **6.5 SUMMARY**

24 Overall, the increase in gross O&M expense from 2023 Approved to 2024 Forecast is
25 4.4 percent. The formula-driven O&M is increasing at a rate of 4.4 percent and the O&M
26 forecast outside of the formula is increasing by 4.2 percent. The capitalized overhead rate of
27 16 percent remains unchanged from 2023, as approved by Order G-165-20.

1 7. RATE BASE

2 *7.1 INTRODUCTION AND OVERVIEW*

3 Rate Base for FEI is forecast to be \$5.816 billion for 2024. Rate Base is comprised of mid-year
4 net gas plant in service, construction advances, work-in-progress not attracting AFUDC,
5 unamortized deferred charges, working capital, and deferred income tax.

6 FEI's 2024 Rate Base includes the full-year impacts of the 2023 closing projected plant
7 balances as well as the impact of the following amounts:

- 8 • Mid-year impact of regular capital additions, net of CIAC additions of \$359.691 million;
- 9 • Mid-year impact of plant depreciation, net of CIAC amortization of \$223.244 million; and
- 10 • Capital additions of CPCN and Major Projects of \$62.185 million as discussed in Section
11 7.2.3.2 below, which include:
 - 12 ○ Mid-year impact of \$3.959 million for the final commissioning components of the
13 Tilbury 1A Expansion Project;
 - 14 ○ Full-year impact of \$45.578 million of capital expenditures and related AFUDC for
15 the IGU Project;
 - 16 ○ Full-year impact of \$12.489 million of capital expenditures and related AFUDC for
17 the Gibsons Capacity Upgrade (GCU) Project; and
 - 18 ○ Full-year impact of \$0.006 million and \$0.153 million of final close out costs and
19 related AFUDC for the Lower Mainland Intermediate Pressure System Upgrade
20 (LMIPSU) Project and Pattullo Gas Line Replacement (PGR) Project,
21 respectively.

22 In addition, various changes in deferred charges, working capital and other items reduce Rate
23 Base by a net amount of \$261.658 million in 2024.

24 Details of the 2024 Forecast plant balances can be found in Section 11, Schedules 5 through 9.

25 *7.2 REGULAR CAPITAL EXPENDITURES*

26 As part of the MRP Decision and Order G-165-20, FEI received the following approvals for
27 capital expenditures:

- 28 • Approval of FEI's forecasts submitted for regular sustainment and other capital
29 expenditures for the years 2020 through 2022;
- 30 • Approval of growth capital to be set annually on a formula basis; and

- 1 • Approval of several items to be forecast outside the formula on an annual basis.
- 2 Further, as part of the FEI Annual Review for 2023 Delivery Rates Decision and Order G-352-
- 3 22, FEI received approval of its forecasts of regular sustainment and other capital expenditures
- 4 for the years 2023 and 2024.
- 5 The components of FEI's 2024 regular capital expenditures are shown in Table 7-1 below.

Table 7-1: Regular Capital Expenditures (\$ millions)

<u>Line</u>		Approved	Projected	Forecast	
<u>No.</u>	<u>Description</u>	2023	2023	2024	<u>Reference</u>
1	Formula Growth Capex	87.531	87.531	54.639	Section 11, Schedule 4, Line 10
2	Forecast Sustainment & Other Capex	183.850	183.850	181.880	Section 11, Schedule 4, Lines 16 + 17
3	Flow through Capex	64.992	31.117	48.939	Section 11, Schedule 4, Sum of Lines 13 to 15
4	Total Gross Regular Capex	336.373	302.498	285.458	Sum of Line 1 to 3; Section 11, Schedule 4, Line 20
5	Less: Formula CIAC	(2.453)	(2.453)	(2.388)	Section 11, Schedule 9, Line 2
6	Less: Forecast CIAC	(4.342)	(4.342)	(12.542)	Section 11, Schedule 9, Line 3 to 5
7	Net Regular Capex	329.578	295.703	270.528	Sum of Line 4 to 6

- 8 In the subsections below, FEI provides further details on its regular capital expenditures for
- 9 2024.

10 **7.2.1 Formula Growth Capital Expenditures**

11 The formula-driven growth capital expenditures start from a base of the prior year's approved

12 unit cost for growth capital (UCGC), escalated by the prior year's inflation, and multiplied by the

13 forecast gross customer additions, resulting in the forecast inflation-indexed growth capital

14 before the true-up of formula growth capital, the formulaic CIAC, and the forecast for the system

15 extension fund (SEF). The true-up of formula growth capital is based on actual gross customer

16 additions from two years prior (i.e., 2022).

17 As calculated in Section 2, the 2024 net inflation factor based on prior year's BC-CPI and BC-

18 AWE is 3.854 percent. Forecast gross customer additions in 2024 of 15,000 are then multiplied

19 by the unit cost for growth capital.

20 For 2024, the annual growth capital expenditures under the formula are calculated as:

21 2023 Approved formula UCGC x [1 + Net Inflation Factor] x 2024 Gross Customer

22 Additions + 2022 Formula Growth Capital True-up + 2024 Formula CIAC + 2024

23 Forecast SEF

24 Table 7-2 below shows the calculation of the resulting 2024 Formula growth capital

25 expenditures.

1 **Table 7-2: Calculation of 2024 Formula Growth Capital (\$ millions)**

Line No.	Description	Forecast		Reference
		2024		
1	Prior Year Base Unit Cost Growth Capital	4,205		G-352-22 and Section 11, Schedule 4, Line 2
2	Net Inflation Factor	3.854%		Section 11, Schedule 3, Line 9, Column 7
3	Current Year Unit Cost Growth Capital	4,367		Line 1 x (1 + Line 2)
4	Gross Customer Addition Forecast	15,000		Section 11, Schedule 4, Line 5
5	Inflation Indexed Growth Capital	65.505		Line 3 x Line 4 / 1,000,000
6	2022 Growth Capital True-up	(14.254)		Line 16
7	Formulaic CIAC	2.388		Section 11, Schedule 9, Line 2, Column 5
8	System Extension Fund	1.000		G-338-20 SEF Decision
9	Gross Formula Growth Capex	54.639		Sum of Line 5 to Line 8
10				
11	<u>2022 Growth Capital True-up</u>			
12	2022 Actual Gross Customer Addition	16,477		Section 2, Table 2-3
13	2022 Forecast Gross Customer Addition	20,000		G-366-21 2022 FEI Annual Review Decision
14	Difference	(3,523)		Line 12 - Line 13
15	2022 Unit Cost Growth Capital (\$/customer)	4,046		G-366-21 2022 FEI Annual Review Decision
16	Growth Capital True-up in 2023	(14.254)		Line 14 x Line 15 / 1,000,000

2
3 The 2024 Gross Formula growth capital amount is \$54.639 million. This amount includes the
4 2022 growth capital true-up reduction of \$14.254 million, the formulaic CIAC amount of
5 \$2.388 million, and the forecast SEF amount for 2024 of \$1 million⁴⁰.

6 **7.2.2 Forecast Capital Expenditures**

7 The level of forecast capital expenditures approved for 2024 as part of the Annual Review for
8 2023 Delivery Rates Decision and Order G-352-22 is shown in Table 7-3 below. The 2023
9 Approved and Projected are also shown for information purpose.

10 **Table 7-3: Forecast Capital Expenditures (\$ millions)**

Line No.	Description	Approved	Projected	Forecast	Reference
		2023	2023	2024	
1	Sustainment Capital	129.336	129.336	130.628	Section 11, Schedule 4, Line 16
2	Other Capital	54.514	54.514	51.252	Section 11, Schedule 4, Line 17
3	Total	183.850	183.850	181.880	Line 1 + Line 2

12 **7.2.3 Flow-Through Capital Expenditures**

13 **7.2.3.1 Regular Capital Expenditures**

14 FEI is afforded flow-through treatment for certain capital items due to a variety of factors,
15 including their uncontrollable nature, because they drive incremental revenues, because they
16 are related to clean growth initiatives, or because of the uncertainty in scope, costs and timing.

⁴⁰ The SEF, up to \$1 million per year, was approved on a permanent basis pursuant to Order G-338-20.

1 The amounts for 2024 are shown in Table 7-4 below along with a comparison to 2023.

2 **Table 7-4: Flow-Through Regular Capital Expenditures (\$ millions)**

<u>Line</u>		Approved	Projected	Forecast	
<u>No.</u>	<u>Description</u>	<u>2023</u>	<u>2023</u>	<u>2024</u>	<u>Reference</u>
1	Pension/OPEB (Growth Capital Portion)	1.034	1.034	0.871	Section 11, Schedule 4, Line 13
2	Biomethane Assets	58.571	29.583	43.068	Section 11, Schedule 4, Line 14
3	NGT Assets	5.387	0.500	5.000	Section 11, Schedule 4, Line 15
3	4 Forecast Regular Capex	64.992	31.117	48.939	Sum of Lines 1 through 3

4 Each of these items is described further below.

5 **Pension/OPEB (Growth Capital Portion)**

6 The 2023 Forecast Pension and OPEB capital expenditures of \$0.871 million represent the
7 forecast growth capital portion of the total Pension and OPEB costs for 2024. Pension and
8 OPEB costs are described in Section 6.3.1.

9 **Biomethane Capital**

10 Table 7-5 below provides the 2023 Approved, 2023 Projected and 2024 Forecast for
11 Biomethane capital expenditures, including the Order approving each project.

12 **Table 7-5: Biomethane Capital Expenditures (\$ millions)**

Line			Approved	Projected	Forecast
<u>No.</u>	<u>Description</u>	<u>BCUC Order</u>	<u>2023</u>	<u>2023</u>	<u>2024</u>
1	Kelowna	E-19-12	-	0.250	0.500
2	REN Energy	G-60-20	-	-	0.500
3	Foothill LF (RDFFG)	E-2-22	10.000	2.000	2.000
4	Dickland Farms	E-13-20	-	0.700	-
5	Capital Regional District	E-15-21	3.000	7.000	3.000
6	City of Vancouver	G-235-19	21.771	17.533	16.613
7	Net Zero Waste	E-21-21	1.000	-	5.000
8	Delta RNG	E-3-22	6.000	1.500	4.205
9	Comox Valley LF	To be filed	10.800	0.500	2.000
10	Andion - Semiahmoo	To be filed	2.000	0.100	2.000
11	Vernon LF	To be filed	4.000	-	2.000
12	Fraser Valley Biogas Expansion	To be filed	-	-	4.250
13	Ecowaste	To be filed	-	-	1.000
13	14 Total Biomethane CAPEX		58.571	29.583	43.068

14 The 2023 Projected and 2024 Forecast Biomethane capital expenditures are \$29.583 million
15 and \$43.068 million, respectively.

16 FEI's applications for each biomethane project are filed and accepted individually by the BCUC;
17 therefore, the capital estimates provided here are not being requested for approval as part of

1 the annual review process, but are provided to include the current estimates for biomethane
2 capital expenditures in customer rates.

3 The 2023 Projected capital expenditures are less than 2023 Approved by \$28.988 million. The
4 variance between 2023 Projected and Approved is the result of a delay in spending on various
5 projects, as summarized in Table 7-5 above, which was partially offset by additional spending
6 on the Capital Regional District (CRD) project. For the CRD project, FEI built a pipeline and
7 station which are expected to be substantially complete in 2023, ahead of the CRD facility
8 completion which is expected to come online in 2024. The lower 2023 Projected expenditures
9 for Foothill LF (RDFFG) are a result of a refreshed schedule which will delay the in-service date.
10 The lower projected capital for the Comox Valley LF, Andion – Semiahmoo, and Vernon LF
11 projects are due to delays in finalizing agreements with these counterparties. The Delta RNG
12 project pipeline has been delayed due to permitting, but FEI has completed the interconnection
13 station and expects to begin taking delivery via a virtual pipeline in 2023; the capital spend on
14 the pipeline will be incurred at a future time.

15 For the 2024 Forecast capital expenditures of \$43.068 million, approximately 39 percent of this
16 amount is related to the final capital costs of the COV project. FEI is now expecting the COV
17 project to be complete and in-service in 2024. The remainder of the 2024 Forecast capital
18 expenditures are related to spending on existing projects such as Kelowna, REN, RDFFG,
19 CRD, Net Zero Waste and Delta RNG, as well as new projects that are expected to be filed for
20 acceptance late in 2023.

21 **Natural Gas for Transportation (NGT) Assets**

22 Table 7-6 provides additional detail by project for the 2023 and 2024 NGT Assets capital
23 expenditures.

24 **Table 7-6: NGT Assets Capital Expenditures (\$ millions)**

Line No.	Description	BCUC Order	Approved 2023	Projected 2023	Forecast 2024
1	T1A Truck Load-out	GGRR	5.387	0.500	5.000
2	Total NGT Capital Expenditures		5.387	0.500	5.000

26 The 2023 Projected and 2024 Forecast NGT Assets capital expenditures are \$0.500 million and
27 \$5.000 million, respectively.

28 The Tilbury T1A truck load-out project has been delayed and the majority of the remaining
29 expenditures are forecast to be incurred in 2024. The reason for the delay is the contractor
30 executing the project filed for bankruptcy protection in April 2023. As a result, completion of this
31 project has been delayed until a path forward with the surety company and stakeholders is
32 established. As of December 2022, FEI had incurred approximately \$12.947 million (excluding
33 AFUDC) of capital expenditures for the Tilbury T1A truck load-out project. FEI incurred a further
34 \$500 thousand (excluding AFUDC) in early 2023 (as shown in Table 7-6 above under 2023
35 Projected) prior to the contractor filing for bankruptcy. FEI is expecting to complete the project in

1 2024. FEI notes the Tilbury T1A truck load-out is a Prescribed Undertaking under the GGRR;⁴¹
2 as such, the capital estimates provided here are not being requested for approval as part of the
3 annual review process, but are provided to include the current estimates for NGT Assets capital
4 expenditures in customer rates.

5 **7.2.3.2 Major Projects Capital Expenditures**

6 Major Projects are capital expenditures that do not form part of regular capital spending as they
7 are approved through a separate CPCN or other application, or are projects that are proceeding
8 as a result of an Order in Council (OIC). As part of the MRP Decision, the BCUC approved the
9 continuation of the current process of reviewing Major Projects outside of the proposed MRP
10 and approved the continuation of the existing financial threshold for CPCNs of \$15 million for
11 FEI for the MRP term.⁴²

12 **7.2.3.2.1 APPROVED MAJOR PROJECTS**

13 In 2024, FEI is forecasting capital expenditures related to the following approved projects:

- 14 • Tilbury 1A Expansion Project;
- 15 • Lower Mainland Intermediate Pressure System Upgrade (LMIPSU) Project;
- 16 • Inland Gas Upgrade (IGU) Project;
- 17 • Pattullo Gas Line Replacement (PGR) Project;
- 18 • Coastal Transmission System (CTS) Transmission Integrity Management Capabilities
19 (TIMC) Project;
- 20 • Gibsons Capacity Upgrade (GCU) Project; and
- 21 • Advanced Metering Infrastructure (AMI) Project.

22 Each project is discussed below.

23 **Tilbury 1A Expansion Project**

24 The cost recovery of expenditures associated with the Tilbury 1A Expansion Project is
25 authorized by Direction No. 5 to the BCUC as amended by OIC Nos. 557 (2013), 749 (2014),
26 and 162 (2017). Under Direction No. 5, FEI can spend up to \$425 million, plus AFUDC and
27 feasibility and development costs, to construct storage and liquefaction facilities. FEI is
28 forecasting the cost of the Tilbury 1A Expansion Project to be within the authorized amount, at a
29 total of approximately \$495 million (\$425 million excluding AFUDC and feasibility and

⁴¹ BC GGRR Prescribed Undertaking 2(3)(a)(ii).

⁴² MRP Decision and Order G-165-20, pp. 132-133.

1 development costs). A total of \$488.982 million was added to rate base by the end of 2022.⁴³
2 FEI forecasts 2023 expenditures of \$2.041 million that will be added to rate base in 2023 and
3 final 2024 expenditures of \$3.959 million that will be added to rate base in 2024.⁴⁴ These
4 expenditures are the close out costs for the process scrubber as well as for on-site noise
5 mitigation work.

6 **LMIPSU Project CPCN**

7 The LMIPSU Project CPCN application was filed with the BCUC in December 2014 and
8 approved by Order C-11-15. The LMIPSU Project includes work on the Coquitlam Gate IP
9 project and the Fraser Gate IP project. The Burnaby and Coquitlam IP sections of the Coquitlam
10 Gate IP project and the Coquitlam gate station were placed in service in 2019 at a cost of
11 \$304.414 million and were added to rate base January 1, 2020. The Coquitlam gate section of
12 the LMIPSU Project was placed in service in 2020 at a cost of \$18.389 million and was added to
13 rate base January 1, 2021. The Fraser Gate portion of the LMIPSU Project was placed in
14 service in 2021 at a cost of \$23.560 million and was added to rate base on January 1, 2022.

15 FEI forecasts further expenditures of \$0.941 million and \$0.006 million (excluding AFUDC) in
16 2023 and 2024, respectively, for contribution payments and environmental monitoring. These
17 amounts will enter rate base in each of the respective years. The total estimated capital cost for
18 the LMIPSU Project, including AFUDC and abandonment/demolition costs, is \$429.859 million.

19 **IGU Project CPCN**

20 The IGU Project CPCN application was filed with the BCUC in December 2018 and approved by
21 Order G-12-20. The IGU Project includes upgrades to 29 pipeline laterals in the Interior of
22 British Columbia that currently do not accommodate in-line inspection. This project addresses
23 pipeline integrity risk associated with pipelines that operate at a hoop stress that has the
24 potential for pipeline rupture due to corrosion on these lines that cannot be detected using
25 current pipeline integrity methods.

26 FEI upgraded the Mackenzie, Cranbrook and Fording Laterals in 2020 at a cost of
27 \$54.572 million. These expenditures were added to rate base on January 1, 2021. FEI
28 upgraded the Fording 2, Prince George 1, Kimberly and Skookumchuck Laterals in 2021 at a
29 cost of \$63.782 million. These expenditures were added to rate base on January 1, 2022. FEI
30 upgraded the Cranbrook-Kimberley loop, Salmon Arm loop and lateral and Cariboo Pulp lateral
31 with a cost of \$67.361 million being added to rate base on January 1, 2023. For 2023, FEI is
32 projecting expenditures of \$58.884 million (\$61.002 million including AFUDC), with
33 \$45.578 million (including AFUDC) expected to be added to rate base on January 1, 2024. For
34 2024, FEI is forecasting \$20.721 million (excluding AFUDC) of capital expenditures. As provided

⁴³ The amounts that entered rate base in 2019, 2020, 2021, and 2022 were \$481.992 million, \$3.966 million, \$2.516 million, \$0.508 million, respectively.

⁴⁴ Including prior years capital additions of \$488.982 million up to the end of 2022, plus \$2.041 million for 2023 and \$3.959 million for 2024 equals to \$494.982 million (including AFUDC).

1 in the IGU Project CPCN application, the total estimated capital cost for the project, including
2 AFUDC and abandonment/demolition costs, is approximately \$360 million.

3 **PGR Project CPCN**

4 The PGR Project CPCN application was filed with the BCUC in August 2020 and approved by
5 Order C-2-21. The PGR Project includes construction of a new NPS 20 (508 mm) gas line and
6 associated facilities in the City of Burnaby to replace the distribution system capacity currently
7 provided by FEI's distribution pressure gas line affixed on the Pattullo Bridge (Pattullo Gas
8 Line), which must be decommissioned in 2023 prior to the demolition of the Pattullo Bridge by
9 the Province. The new NPS 20 (508 mm) gas line and associated facilities in the City of
10 Burnaby have been completed in 2022 with approximately \$150.8 million added to rate base on
11 January 1, 2023. The remaining project scope includes decommissioning and/or abandonment
12 of existing infrastructure that are no longer required due to the removal of the Pattullo Gas Line
13 crossing of the Fraser River. FEI forecasts expenditures of \$3.704 million and \$0.153 million
14 (excluding AFUDC) in 2023 and 2024, respectively, related to the decommissioning and/or
15 abandonment work of the existing infrastructure.

16 **CTS TIMC Project CPCN**

17 The CTS TIMC Project CPCN application was filed with the BCUC in February 2021 and
18 approved by Order C-2-33. The CTS TIMC project consists of alterations to FEI's CTS to allow
19 FEI to run electro-magnetic acoustic transducer (EMAT) in-line inspection (ILI) tools on 11
20 pipelines that were deemed susceptible to cracking threats. These alterations are expected to
21 be constructed in 2023 and 2024 with capital expenditures forecast to be \$22.746 million and
22 \$63.107 million (excluding AFUDC), respectively. There are no capital additions to rate base in
23 2024 as the project is expected to be completed by the end of 2025. As described in the CTS
24 TIMC Project CPCN application, the total estimated capital cost for the project, including
25 AFUDC, is approximately \$137.8 million.

26 **GCU Project**

27 The GCU Project was filed with the BCUC as part of the 2023 Annual Review and the forecast
28 capital expenditures were approved by Order G-352-22. The GCU Project involves a new local
29 CNG peak shaving facility to address the shortfall of capacity supplied to the community of
30 Gibsons during design conditions. The GCU Project is expected to be complete in 2023 with a
31 forecast total capital cost of \$12.489 million, including AFUDC, which will be added to rate base
32 on January 1, 2024. FEI is not expecting capital expenditures in 2024 related to the GCU
33 Project.

34 **AMI Project CPCN**

35 The AMI Project CPCN application was filed with the BCUC in May 2021 and was approved by
36 Order C-2-23 on May 15, 2023. The AMI Project involves installation of approximately 1 million
37 residential, commercial, and industrial advanced gas meters and meter retrofits of
38 communication modules capable of remote gas consumption measurement. The project also

1 includes installation of approximately 1,100 communication modules on FEI's gas network as
2 well as installation of the AMI network and infrastructure for communication with the AMI
3 meters.

4 Given the timing of the decision, initiation of the AMI Project is in the very early stages and FEI
5 is not expecting to have any capital additions to rate base in 2024. FEI is currently developing
6 the final capital budget and schedule; on July 21, 2023, FEI requested BCUC approval to defer
7 the first semi-annual progress report to January 31, 2024. FEI will provide the updated capital
8 budget and schedule as part of the first semi-annual progress report. According to the forecast
9 provided in the CPCN application, the total capital expenditures during the pre-deployment and
10 deployment stages are estimated to be \$752.5 million up to 2026⁴⁵.

11 **7.3 2024 PLANT ADDITIONS**

12 The 2024 Plant Additions are comprised of: (i) FEI's 2024 regular capital expenditures from
13 Section 7.2 above; (ii) the change in work in progress which adjusts for capital expenditures for
14 projects that are still in progress at year end; (iii) AFUDC; (iv) overhead capitalized for the year;
15 and (v) the additions from Major Projects on January 1, 2024 related to the Tilbury 1A
16 Expansion Project, LMIPSU Project, IGU Project, PGR Project, and GCU Project as discussed
17 in Section 7.2.3.2 above.⁴⁶ A reconciliation of capital expenditures to plant additions is shown in
18 Table 7-7 below and is also provided in Section 11, Schedule 5.

⁴⁵ AMI CPCN Application, Evidentiary Update, Appendix A, Table 6-1.

⁴⁶ No plant additions in 2024 related to the CTS TIMC Project and the AMI Project.

1 **Table 7-7: Reconciliation of 2024 Capital Expenditures to Plant Additions (\$ millions)**

Line No.	Description	2024	
		Forecast	Reference
1	Formula Growth Capex	54.639	Section 11, Schedule 4, Line 10
2	Forecast Sustainment & Other Capex	181.880	Section 11, Schedule 4, Line 16 + Line 17
3	Flow through Capex	48.939	Section 11, Schedule 4, Sum of Line 13 to Line 15

20			
21	Total Plant Additions	436.806	

3 **7.4 ACCUMULATED DEPRECIATION**

4 FEI's rate base includes both the accumulated depreciation on plant in service and accumulated
5 amortization of CIAC. Both are increased through depreciation expense and decreased through
6 retirements.

7 The depreciation rates used for 2024 were approved by Order G-165-20 and are based on FEI's
8 most recent depreciation study. Depreciation is calculated beginning January 1 of the year after
9 the assets are placed in service, which is the treatment approved by Order G-138-14.

10 Based on calculating depreciation expense at these approved depreciation rates on the opening
11 plant-in-service balance net of CIAC, the 2024 depreciation expense is calculated as
12 \$219.593 million.⁴⁷

13 **7.5 DEFERRED CHARGES**

14 On May 3, 2017, the BCUC issued its Regulatory Account Filing Checklist.⁴⁸ The stated purpose
15 of the checklist is to assist regulated entities when filing regulatory account requests and to
16 facilitate an efficient review by the BCUC.

⁴⁷ \$228.416 million depreciation expense as calculated in Section 11, Schedule 21, Line 5 less \$8.823 million amortization of CIAC as calculated in Section 11, Schedule 21, Lines 11 and 12.

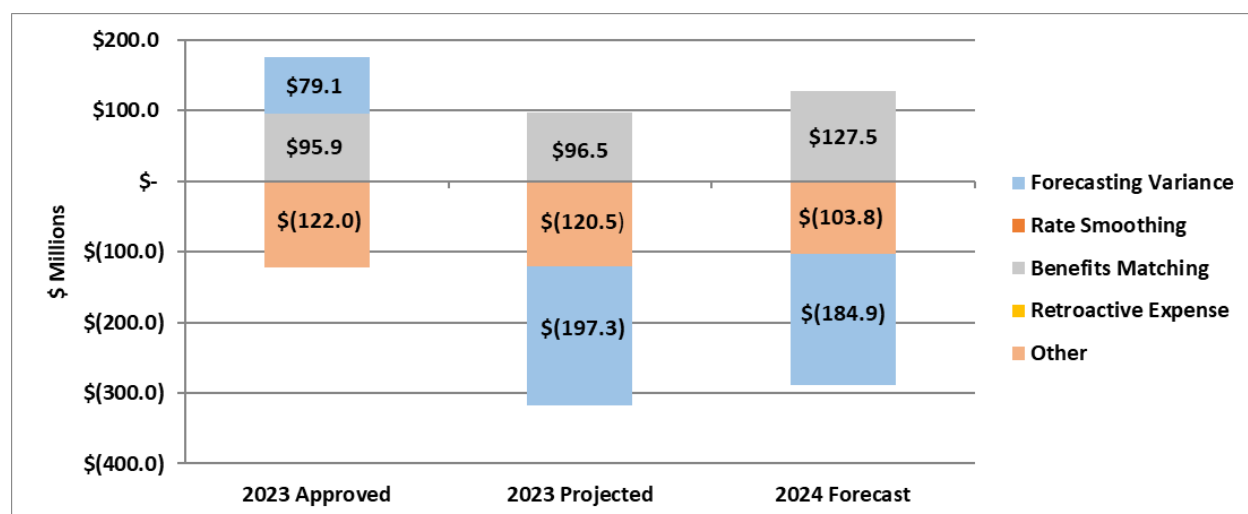

⁴⁸ Log No. 53608, Appendix B.

1 The checklist classifies deferral accounts as one of: (a) forecast variance account; (b) rate
2 smoothing account; (c) benefit matching (capital-like) account; (d) retroactive expense account;
3 or (e) other. In Section 11, Schedules 11 and 11.1, FEI has classified its existing rate base
4 deferral accounts in accordance with this classification.

5 The 2024 Forecast mid-year balance of unamortized deferred charges in rate base for FEI is a
6 credit of \$161.137 million.

7 Figure 7-1 below provides the mid-year deferral account balances summarized by deferral
8 account category. The largest drivers of the 2024 Forecast credit balance are forecasting
9 variance deferral accounts, in particular, the MCRA and CCRA. The large reduction in the mid-
10 year balances of the MCRA and CCRA is mainly due to strong mitigation performance by FEI at
11 the end of 2022 when there were large price spreads that occurred between FEI's supply
12 markets (i.e., Station 2 and AECO/NIT) and the market demand centres (i.e.,
13 Huntingdon/Sumas and Kingsgate), as well as a favourable forward commodity gas prices.
14 Other deferral accounts contributing to the credit balance are the Net Salvage Provision deferral
15 account and the net variance between the Pension and OPEB Funding accounts. The credit
16 balance is partially offset by the debit balances in several deferral accounts, in particular, the
17 DSM deferral account and the Greenhouse Gas Reduction Regulation Incentives deferral
18 account.

19 **Figure 7-1: FEI Forecast Mid-Year Balances of Rate Base Deferral Accounts by Category**

20
21 Based on the approved amortization of each deferral account and the 2024 opening balances,
22 the 2024 amortization expense to be recovered as part of the proposed 2024 delivery margin is
23 calculated as \$134.012 million, including both rate base and non-rate base deferral accounts.⁴⁹
24 The subsections below include a discussion on new rate base deferral accounts and changes or
25 updates to existing rate base deferral accounts. For a discussion on non-rate base deferral
26 accounts, please refer to Section 12.

⁴⁹ Section 11, Schedule 21, Column 3, Sum of Lines 8 to 10.

1 **7.5.1 New Deferral Accounts**

2 FEI is seeking approval of four new rate base deferral accounts in this Application:

- 3 • 2025 Multi-year Rate Plan (MRP) Application;
- 4 • 2023 Cost of Service Allocation (COSA) Study;
- 5 • 2024-2027 Demand Side Management (DSM) Expenditure Plan; and
- 6 • PST Rebate on Select Machinery and Equipment.

7 The purpose of the first three new deferral accounts is to capture costs related to the regulatory
8 processes for the applications associated with each account. The final new deferral account is
9 for capturing the PST rebates from the Province of BC. Table 7-8 below addresses the
10 considerations identified in the BCUC Regulatory Account Filing Checklist, as they pertain to the
11 deferral accounts requested in Sections 7.5.1.1 to 7.5.1.4 below.

12 **Table 7-8: Deferral Account Filing Considerations**

Item	Consideration	Regulatory Proceeding Costs (2025 MRP, 2023 COSA, and 2024-2027 DSM Expenditures)	PST Rebate on Select Machinery and Equipment
I.	Indicate if the request is: (a) for a modification or a change in scope to an existing Commission approved regulatory account; or (b) to establish a new regulatory account.	The three regulatory proceeding cost accounts are new deferral accounts, consistent with previously approved regulatory proceeding deferral accounts. Please refer to Sections 7.5.1.1 to 7.5.1.3 for additional information.	The PST Rebate on Select Machinery and Equipment is a new deferral account. Please refer to Section 7.5.1.4 for additional information.
a)	If the request is for a modification or change in scope to an existing regulatory account, explain why the existing regulatory account is an appropriate account to use (specifically addressing the existing account's intended and approved purpose, mechanism for recovery, timeline for recovery and carrying costs).	N/A	N/A
b)	If the request is for approval of a new regulatory account, state the purpose of the regulatory account and explain its intended use.	The requested accounts are regulatory proceeding cost accounts, which are routinely sought by utilities to capture external costs related to the preparation, filing, and regulatory review of applications.	The requested account will capture PST Rebates on Select Machinery and Equipment received from the Province of BC.

Item	Consideration	Regulatory Proceeding Costs (2025 MRP, 2023 COSA, and 2024-2027 DSM Expenditures)	PST Rebate on Select Machinery and Equipment
II.	Propose a term (i.e. length of time) that the regulatory account should be approved for and explain why that term is appropriate.	The term of each account encompasses the preparation and filing of the relevant regulatory application and its review by the BCUC.	The term of the account encompasses the required time for the Province of BC to approve the qualified claim filed by FEI and issue the refund payment.
III.	Identify any alternate treatments that were considered, including an overview of what the accounting treatment would be in the absence of approval of the request to establish a regulatory account, and explain why these alternate treatments may not be appropriate.	<p>In the absence of deferral accounts for regulatory proceedings, the costs of regulatory proceedings would have to be forecast as an O&M expense (outside of the MRP index-based O&M since regulatory proceeding costs are not included in Base O&M Expense) and trued up annually by way of the Flow-through deferral account. FEI considers this to be a more cumbersome and less efficient means of accounting for regulatory proceeding costs.</p> <p>It is accepted regulatory practice to defer the costs of regulatory applications for review and recovery following the regulatory review of the application itself. Review and recovery after the completion of the regulatory process allows for more transparency as the history of the costs is simpler to track and report.</p>	In the absence of a deferral account, the rebate would be recorded as an offset in the applicable accounts where the original PST costs were recorded, whether those accounts were O&M or capital. FEI considers this to be a less transparent way of recording the rebates as it is the cost of service impacts of the amounts credited to capital that would be returned to customers over a longer timeframe, rather than the rebate amount itself over one year as proposed using the deferral account approach.

Item	Consideration	Regulatory Proceeding Costs (2025 MRP, 2023 COSA, and 2024-2027 DSM Expenditures)	PST Rebate on Select Machinery and Equipment
IV a)	Address: whether, or to what extent, the item is outside of management's control;	Regulatory proceeding cost accounts are necessary because the number and type of regulatory proceedings can vary significantly by year. Further, once a regulatory proceeding is identified, the costs of that proceeding cannot be accurately forecast by the utility given that they can vary substantially, are not known at the time of making the regulatory account request, are unique to the circumstances for each application, may change as the regulatory review process unfolds, and are dependent on factors not within the utility's control. Factors not within the control of the utility include the regulatory process determined by the BCUC and the degree of involvement of interveners.	The final amount of PST rebates claimed by FEI are subject to approval by the Province of BC.
b)	the degree of forecast uncertainty associated with the item;	Refer to IV. a). FEI forecasts additions to the deferral accounts based on the expected type of review process and degree of intervener involvement. Actual costs are recorded in the account so that actual, not forecast, costs are recovered in rates.	Refer to IV. a). FEI forecasts additions to the deferral account based on the rebates received to date plus those claimed and expected to be received. Actual expected rebates will be recorded in the account so that actual, not forecast, rebates are returned in rates.
c)	the materiality of the costs	The number and size of regulatory proceedings vary from year to year, and represent costs not included in Base O&M for the purpose of determining formula O&M Expense under the MRP. Please refer to Sections 7.5.1.1 to 7.5.1.3.	FEI expects rebates of approximately \$2.173 million (\$1.586 million after-tax). Please refer to Section 7.5.1.4 for additional information.
d)	any impact on intergenerational equity	Generally, FEI recovers the costs of regulatory proceedings over the period of time related to the application, which serves to match the costs and benefits. Please refer to Sections 7.5.1.1 to 7.5.1.3. There are no intergenerational inequities inherent in this practice.	FEI expects to return the rebates over the same period of time as the qualifying period to make the PST rebate claims. There are no intergenerational inequities in this practice.

Item	Consideration	Regulatory Proceeding Costs (2025 MRP, 2023 COSA, and 2024-2027 DSM Expenditures)	PST Rebate on Select Machinery and Equipment
V.	Classify the regulatory account as either: (a) forecast variance account; (b) rate smoothing account; (c) benefit matching account; (d) retroactive expense account; or (e) other.	FEI generally classifies regulatory proceeding accounts as benefit matching accounts since the costs are recovered over the period of time related to the applications, which serves to match the costs and benefits of the application.	The account is classified as “other”.
VI.	Identify if the regulatory account is a cash or non-cash account.	Regulatory proceeding cost accounts are cash accounts.	The PST Rebate on Select Machinery and Equipment is a cash account.
VII.	Specify what additions to the regulatory account are being requested (i.e. type and amount of additions), including whether the account is intended to capture additions for a specific period of time or on an ongoing basis.	Eligible costs include the BCUC’s direct costs, notice publication costs, fees for consultants or experts, external legal counsel fees, courier and miscellaneous administrative costs, and participant cost awards incurred in the preparation, filing and regulatory review of the applications. Regular labour and staff expenses related to regulatory applications are included in formula O&M expense.	PST Rebates received from the Province of BC for claims filed by FEI for the qualifying period. Please refer to Section 7.5.1.4 for additional information.
VIII.	Propose a mechanism for recovery (e.g. how the balance in the regulatory account will be recovered or refunded to ratepayers) and explain why it is appropriate.	Costs will be recovered in revenue requirements by way of amortization expense.	Rebates will be refunded in revenue requirements by way of amortization expense.
IX.	Propose a timeline for recovery (e.g. the period over which the regulatory account balance is either collected or refunded; also referred to as the amortization period) and explain why it is appropriate.	Generally, FEI proposes to amortize the costs of regulatory proceedings over the period of time related to the application, which serves to match the timing of costs and benefits. Please refer to Sections 7.5.1.1 to 7.5.1.3.	FEI proposes to refund the rebates over one year beginning January 1, 2024, to match the approximate qualifying period of eligible PST paid on purchases. Please refer to Section 7.5.1.4 for additional information.
X.	Propose a carrying cost for the balance in the regulatory account and explain why it is appropriate.	Rate base deferral accounts are included in rate base and therefore, implicitly financed using the weighted average cost of capital (WACC).	Rate base deferral accounts are included in rate base and therefore implicitly financed using the weighted average cost of capital (WACC).

Item	Consideration	Regulatory Proceeding Costs (2025 MRP, 2023 COSA, and 2024-2027 DSM Expenditures)	PST Rebate on Select Machinery and Equipment
XI.	Outline a recommended regulatory process for the Commission's review of the application.	The proposed deferral accounts can be reviewed as part of the present proceeding. Deferral account approvals and disposition are generally determined in revenue requirements proceedings.	

1

2 **7.5.1.1 2025 Multi-year Rate Plan (MRP) Application**

3 FEI's current Multi-year Rate Plan (MRP) approved by Order G-165-20 will end in 2024. FEI has
 4 started developing its next rate plan and expects to file this rate plan with the BCUC in early
 5 2024. FEI will incur regulatory costs related to the development of the application and is
 6 requesting approval to establish a rate base deferral account to capture these costs, which will
 7 include BCUC costs, participant funding costs, external legal fees, expert/consulting costs,
 8 notice publication costs, and miscellaneous facilities, stationery, and supplies costs. FEI
 9 forecasts costs of \$0.350 million (\$0.256 million after-tax) in 2023 and \$1.200 million (\$0.876
 10 million after-tax) in 2024. Actual costs will vary depending on how the application progresses
 11 and will be confirmed after the regulatory process is completed.

12 FEI is only requesting approval to establish this deferral account. FEI will propose an
 13 amortization period for the deferral account in a future rate-setting application (i.e., subsequent
 14 to the completion of the 2025 MRP application proceeding).

15 **7.5.1.2 2023 Cost of Service Allocation (COSA) Study**

16 In the BCUC's Decision and Order G-4-18, dated January 9, 2018 (2016 COSA Decision), FEI
 17 was directed to file a comprehensive and updated COSA study for review by the BCUC five
 18 years after the release of its decision on FEI's 2016 Rate Design Application (RDA).⁵⁰ The
 19 BCUC issued its final Decision and Order G-135-18 (2016 RDA Decision) on July 20, 2018. In
 20 accordance with the 2016 COSA Decision and 2016 RDA Decision, FEI submitted its 2023
 21 COSA Study and Revenue Rebalancing Application on July 20, 2023.

22 FEI is requesting approval to establish a rate base deferral account to capture the regulatory
 23 costs associated with the 2023 COSA Study and Revenue Rebalancing Application. These
 24 costs include BCUC costs, participant funding costs, external legal fees, and miscellaneous
 25 facilities, stationery, and supplies costs. FEI forecasts costs of \$0.056 million (0.041 million
 26 after-tax) in 2023 and \$0.084 million (\$0.061 million after-tax) in 2024. Actual costs will vary
 27 depending on how the regulatory proceeding progresses and will be confirmed after the
 28 regulatory process is completed.

⁵⁰ 2016 COSA Decision, page 22 and Directive 5 of Order G-4-18.

1 FEI is only requesting approval to establish this deferral account. FEI will propose the
2 disposition of this account in a future rate-setting application once the regulatory process is
3 complete (or substantially complete).

4 **7.5.1.3 2024-2027 DSM Expenditures Schedule Application**

5 On July 12, 2023, FEI filed the 2024-2027 Demand Side Management (DSM) Expenditures
6 Application. FEI is requesting approval to establish a rate base deferral account to capture
7 regulatory costs associated with the 2024-2027 DSM Expenditures Application. These costs
8 include BCUC costs, participant funding costs, external legal fees, expert/consulting costs,
9 notice publication costs, and miscellaneous facilities, stationery, and supplies costs. FEI
10 forecasts costs of \$0.100 million (\$0.073 million after-tax) in 2023 and \$0.100 million (\$0.073
11 million after-tax) in 2024.

12 Consistent with past practice, FEI proposes to amortize the costs over four years, beginning in
13 2024, which represents the four-year time period of the DSM plan. Any variances between the
14 forecast account balances and the actual incurred costs will be amortized in rates in the
15 following years.

16 **7.5.1.4 PST Rebate on Select Machinery and Equipment**

17 The BC PST Rebate on Select Machinery and Equipment is a provincial government program to
18 help corporations recover from the financial impacts of the COVID-19 pandemic. Eligible
19 businesses can receive as a rebate the PST paid on purchases of specified equipment and
20 software during the qualifying period between September 17, 2020, and March 31, 2022.

21 FEI is eligible to claim a BC PST Rebate on Select Machinery and Equipment on capital
22 purchases of software and equipment and has filed for these rebates for the qualifying periods
23 as set out by the Province of BC. To date, FEI has received \$1.071 million (\$0.782 million after-
24 tax) in rebates and expects additional rebates of approximately \$1.102 million (\$0.804 million
25 after-tax) to be received by December 31, 2023.

26 FEI is requesting approval to establish a rate base deferral account to capture the PST Rebates
27 on Select Machinery and Equipment received from the Province of BC. Further, FEI is
28 proposing to amortize these rebates to customers over one year beginning January 1, 2024, to
29 match the approximate qualifying period of eligible PST paid on purchases.

30 **7.5.2 Existing Deferral Accounts**

31 In the discussion below, FEI requests an amortization period for one existing deferral account.

32 **7.5.2.1 Transportation Service Report**

33 On July 20, 2018, the BCUC issued the 2016 RDA Decision, approving a number of rate design
34 changes to FEI's Transportation Service model. The decision directed FEI to file a report on the
35 Transportation Service Model by June 1, 2022, assessing the impact of the approved rate

1 design changes, and to engage with stakeholders to review the Transportation Service Model in
2 the preparation of the report. Subsequent to the 2016 RDA Decision, the BCUC issued its
3 Decision and Order G-210-20 dated August 10, 2020, in the matter of a complaint filed by a
4 marketer group directing that FEI address additional items in the Transportation Service Report.

5 As part of the Annual Review for 2022 Delivery Rates Decision and Order G-366-21, FEI
6 received approval to establish the Transportation Service Report deferral account to capture the
7 costs related to filing the Transportation Services Report. FEI filed the report on June 15, 2022
8 and incurred total costs of \$0.236 million (\$0.173 million after-tax) for consulting fees, legal
9 expenses and BCUC costs.

10 In this Application, FEI is seeking approval to amortize these costs over one year commencing
11 January 1, 2024.

12 **7.6 WORKING CAPITAL**

13 The working capital component of rate base is comprised of cash working capital and other
14 working capital.

15 Cash working capital is defined as the average amount of capital provided by investors in the
16 Company to bridge the gap between the time expenditures are required to provide service
17 (expense lag) and the time collections are received for that service (revenue lag). The cash
18 working capital requirements that have been included reflect the most recent Lead Lag Study
19 results, as approved by Order G-165-20.

20 Other working capital includes gas in storage, transmission line pack gas, inventory of materials
21 and supplies, employee loans and withholdings and refundable contributions.

22 The main components of other working capital are gas in storage and transmission line pack,
23 which are forecast on a 13-month average basis using the approved costs embedded in the Q2
24 2023 gas cost report and historical volumes. All other 2024 amounts are forecast based on
25 2022 Actual levels.

26 **7.7 SUMMARY**

27 FEI's rate base includes the impact of formula-driven growth capital expenditures, regular
28 capital expenditures that are forecast outside of the formula, and CPCNs and major projects,
29 adjusted for work-in-progress, AFUDC and overheads capitalized. FEI has provided forecasts
30 for all of its rate base deferral accounts in the financial schedules included in Section 11. In
31 Section 7.5.1, FEI requested four new deferral accounts, and in Section 7.5.2, FEI requested an
32 amortization period for one existing deferral account. Finally, the rate base includes other
33 working capital, composed of gas in storage and other smaller components that have been
34 forecast consistent with prior years.

1 **8. FINANCING AND RETURN ON EQUITY**

2 **8.1 INTRODUCTION AND OVERVIEW**

3 FEI has prepared this Application using the benchmark capital structure of 61.5 percent debt
4 and 38.5 percent equity and Return on Equity (ROE) of 8.75 percent approved by Order G-129-
5 16. FEI is currently awaiting a decision on Stage 1 of the BCUC-initiated Generic Cost of Capital
6 (GCOC) proceeding which it expects to be issued in the upcoming months. FEI will provide an
7 update to its rate calculations as part of an Evidentiary Update subsequent to the GCOC
8 decision being issued.

9 The 2024 Forecast for financing costs, including the interest expense on issued long- and short-
10 term debt and on new issuances that are forecast, has been updated as described in
11 Section 8.3 below. Based on the updated financing costs, FEI's AFUDC rate for 2024 (which is
12 equal to its after-tax weighted average cost of capital) is 5.50 percent⁵¹. Any variances from
13 interest rates used to set delivery rates, and any variances in interest resulting from items
14 subject to flow-through in the Flow-through deferral account, will be flowed through to
15 customers. All other differences in interest expense will affect the achieved ROE and be subject
16 to earnings sharing.

17 **8.2 CAPITAL STRUCTURE AND RETURN ON EQUITY**

18 The Company finances its investment in rate base assets with a mix of debt and equity, as
19 approved by the BCUC from time to time. Pursuant to Order G-129-16, the BCUC approved a
20 benchmark capital structure of 61.5 percent debt and 38.5 percent equity with an allowed ROE
21 of 8.75 percent, effective January 1, 2016, which have been used to calculate rates in this
22 Application.

23 **8.3 FINANCING COSTS**

24 Debt financing costs include the borrowing costs on issued debt as well as on new issuances
25 that are forecast. Debt consists of both long- and short-term debt.

26 **8.3.1 Long-Term Debt**

27 FEI is a public issuer of long-term debt. FEI plans to issue long-term debt of approximately
28 \$200 million in 2024. FEI will use the funds to repay existing indebtedness and finance the
29 Company's capital expenditure program. The 2024 debt issuance is reflected in the financial
30 schedules in July 2024 at a rate of 4.70 percent⁵². The exact timing, amount and rate of the
31 issuances will depend on future market conditions and capital expenditure requirements.

⁵¹ As part of the Evidentiary Update, FEI will update the AFUDC rate for 2024 to reflect any changes resulting from the GCOC decision.

⁵² Section 11, Schedule 27, Line 19 (effective rate 4.763 percent).

1 Variances in interest expense related to the timing and amount of the issuances of the debt or
2 the rates at which they are issued will be captured in the Flow-through deferral account.

3 **8.3.2 Short-Term Debt**

4 FEI obtains short-term funding primarily through the issuance of commercial paper to Canadian
5 institutional investors. FEI backstops the commercial paper issuances by maintaining a
6 \$700 million committed credit facility that matures in July 2027.⁵³ The credit facility provides FEI
7 with short-term liquidity to fund its capital program and working capital requirements. FEI also
8 maintains a \$55 million letter of credit facility that matures in March 2024 to support its letters of
9 credit.

10 **8.3.3 Forecast of Interest Rates**

11 FEI uses interest rate forecasts to estimate future interest expense. Forecasts of Treasury Bills
12 and benchmark Government of Canada Bond interest rates are used in determining the overall
13 interest rates for short-term debt and for rates on new issues of long-term debt, respectively.
14 The forecasts are based on available projections made by Canadian Chartered banks.

15 Credit spreads on new long-term debt are based on current indicative rates, on the assumption
16 that the current credit ratings of FEI are maintained.

17 FEI's short-term borrowing rate is based on the rate at which it issues commercial paper. Since
18 commercial paper issuance rates are not forecast by economists, a forecast needs to be
19 derived by FEI. The forecast is based on the historical differential between the Canadian
20 Deposit Overnight Rate (CDOR) and the rate obtained by FEI under its commercial paper
21 program. CDOR is used because FEI's short-term borrowings under its credit facility are priced
22 based on CDOR and therefore CDOR is tracked relative to FEI's commercial paper borrowings.
23 As CDOR is not forecast by economists, FEI must first obtain the 3-month T-Bill rate forecast
24 and then convert it to a CDOR forecast. FEI does this by taking the 3-year historical spread
25 between CDOR and the 3-month T-Bill rate. Then, to derive the short-term borrowing rate
26 forecast, FEI adjusts the CDOR forecast with the 3-year historical spread between CDOR and
27 rates of issuances under its commercial paper program.

28 The 3-month T-Bill forecast for 2024 is 4.27 percent, which is an increase from the 3.14 percent
29 approved in 2023. FEI continues to face a rising interest rate environment due to high inflation
30 and the Bank of Canada continuing to raise its policy interest rate in an attempt to slow
31 economic growth and reduce core inflation. While the inflation in Canada eased to 3.40 percent
32 in May 2023 from a high of 8.10 percent from a year ago, the downward movement was driven
33 largely by lower energy prices rather than easing underlying inflation. The Bank of Canada's

⁵³ On July 14, 2023, FEI filed an application with the BCUC to increase the principal amount of the credit facility from \$700 million to \$900 million and to extend the maturity date of the credit facility to July 2028. If this application is approved, FEI will include any related impacts in the Evidentiary Update which FEI expects to file subsequent to the GCOC decision being issued.

1 latest interest rate increase in July 2023 brings the overnight rate to 5.0 percent, which was the
2 tenth interest rate increase since March 2022 when the overnight rate was at 0.25 percent.

3 For 2024, FEI forecasts higher Other Financing Fees than the 2023 Approved amount due to
4 higher customer deposit interest, resulting from a higher prime rate in 2023. Other Financing
5 Fees include the fees that FEI incurs for its letters of credit under the \$700 million credit facility
6 and the \$55 million letter of credit facility discussed in Section 8.3.2, as well as interest paid on
7 customer deposits. The short-term borrowing rate forecast is shown in Table 8-1 below.

8 **Table 8-1: Short Term Interest Rate Forecast**

FEI Short Term Interest Rate	Approved 2023	Projected 2023	Forecast 2024
3-Month T-Bill Rate ¹	3.14%	5.04%	4.27%
Spread to CDOR	0.36%	0.41%	0.41%
CDOR Rate	3.50%	5.45%	4.69%
Spread to CP	-0.34%	-0.22%	-0.22%
CP Dealer Commission	0.10%	0.10%	0.10%
ST Interest Rate on Credit Facilities	3.26%	5.34%	4.57%
Fixed Financing Fees ²			
Standby fee on Undrawn Credit ³	0.44%	0.72%	0.57%
Renewal Fee on Undrawn Credit	0.16%	0.26%	0.20%
Other Financing Fees ⁴	0.10%	0.26%	0.22%
ST Interest Rate on Fixed Financing Fee	0.69%	1.24%	0.99%
FEI Short Term Rate	3.95%	6.58%	5.56%

9 *Notes to table:*

10 ¹ 3-month T-Bill rate for 2024 is a weighted average rate based on forecasts provided by Canadian Chartered banks
11 in July 2023.

12 ² Fixed financing fees represent the costs of maintaining the credit facility and letter of credit facility, which are fixed
13 fees incurred regardless of whether FEI draws from the credit facility. The fees have been converted into a short-
14 term rate for forecast purposes.

15 ³ A standby fee of 16 bps is charged on undrawn credit facility amounts, which would change if credit facility
16 amounts are drawn through banker acceptances or prime loans. However, the forecast assumes FEI will borrow
17 through commercial paper and will not change the undrawn credit facility fee percentage.

18 ⁴ Other financing fees include commercial paper issuance fees, letter of credit fees, customer deposit interest
19 expense and miscellaneous bank administration costs. The letter of credit fees, customer deposit interest and
20 miscellaneous bank administration costs are incurred regardless of whether FEI draws from the credit facility.
21

22 As noted above, FEI's interest rate forecasts are based on CDOR. An indirect result of the
23 cessation of the publication of the London Interbank Offered Rate (LIBOR) is that Canada is
24 planning to discontinue using CDOR as a risk-free rate benchmark for financial instruments in
25 multiple asset classes. This will impact FEI's credit facility agreement as Refinitiv Benchmark
26 Services (UK) Limited (RBSL), CDOR's regulated administrator, announced that CDOR will

1 cease to be published after June 28, 2024.⁵⁴ The Canadian Alternative Reference Rate (CARR)
2 Working Group was established to coordinate the transition to a new risk-free rate benchmark.
3 In January 2023, the CAAR Working Group announced the development of a Term Canadian
4 Overnight Repo Rate Average (Term CORRA), a risk-free interest rate benchmark for one- and
5 three-month terms. Term CORRA is expected to replace CDOR and will become available in
6 the latter half of 2023. As the Term CORRA rate is not yet available, FEI continues to use the
7 CDOR methodology, consistent with its previous Annual Reviews, to forecast the short-term
8 interest rate for 2024.

9 **8.3.4 Interest Expense Forecast**

10 The interest expense forecast reflects FEI's existing and forecast borrowing costs on long- and
11 short-term debt.

12 Short-term interest expense is determined by applying the forecast short-term debt rate to the
13 estimated short-term debt balance. Long-term debt interest expense is determined using the
14 effective interest method. For each long-term debt issue, the effective rate (forecast effective
15 rate if it is a new issue) is multiplied by the average balance of that long-term debt for the year.
16 The 2024 long-term debt schedule for FEI can be found in Section 11, Schedule 27.

17 **8.3.5 Allowance for Funds Used During Construction (AFUDC)**

18 FEI applies AFUDC to projects that are greater than three months in duration and greater than
19 \$100 thousand. Based on the above information, FEI's AFUDC rate for 2024 (which is equal to
20 its after-tax weighted average cost of capital) is 5.50 percent. The calculation of the rate is
21 shown in the following table.

22 **Table 8-2: Calculation of AFUDC Rate for 2024**

	Weight	Pre Tax Rate	After Tax Rate	Earned Return
Short Term Debt	3.39%	5.56%	4.06%	5.56%
Long Term Debt	58.11%	4.69%	3.42%	4.69%
Common Equity	38.50%	11.99%	8.75%	8.75%
Weighted Average	100.00%	7.53%	5.50%	6.28%

24 **8.4 SUMMARY**

25 FEI's equity financing and ROE have been forecast for 2024 at the same percentages as
26 approved by Order G-129-16. FEI's debt financing costs on rate base are primarily determined
27 by embedded rates on long-term debt, and to a lesser degree by short-term debt rates; the
28 embedded rate on long-term debt is forecast to decrease slightly in 2024 compared to 2023

⁵⁴ <https://www.bankofcanada.ca/markets/canadian-alternative-reference-rate-working-group/>.

1 (4.69 percent forecast for 2024 compared to 2023 Approved of 4.70 percent). FEI expects a
2 decision on Stage 1 of the BCUC-initiated GCOC proceeding to be issued in the upcoming
3 months. FEI will provide an update to its equity financing and ROE forecast as well as the
4 calculation for AFUDC as part of an Evidentiary Update which FEI will file subsequent to the
5 GCOC decision being issued.

1 9. TAXES

2 9.1 INTRODUCTION AND OVERVIEW

3 This section discusses FEI's forecasts of property taxes and income tax which have been
4 completed on a basis consistent with prior years. In 2024, property taxes are forecast to
5 increase by 5.3 percent from 2023 Approved, and income tax is forecast to increase by 32.2
6 percent compared to 2023 Approved.

7 9.2 PROPERTY TAXES

8 The 2024 Forecast of property taxes is approximately \$83.359 million which is based on the
9 Company's forecasts of assessed values of taxable assets, mill rates and taxes from revenues
10 earned from gas consumed within municipalities. A breakdown of property taxes by asset type
11 is provided in Table 9-1 below.

12 **Table 9-1: Property Tax Components (\$ millions)**

Line No.	Description	Approved 2023	Projected 2023	Forecast 2024
1	Distribution Assets	\$ 27.938	\$ 29.252	\$ 30.247
2	Transmission Assets	20.167	20.951	21.434
3	Gas Storage Assets	7.818	8.408	8.597
4	Manufactured Gas Assets	0.051	0.062	0.065
5	General Assets	6.652	6.092	6.289
6	In-Lieu	16.323	12.820	16.510
7	BCER Fees	0.287	0.292	0.295
8	Total Property Taxes	79.236	77.877	83.436
9	Less: Property Tax Transferred to BVA	(0.092)	(0.092)	(0.077)
10	Net Property Tax	79.144	77.785	83.359
11				
12	Forecast Change from 2023 Approved			5.3%
13	Forecast Change from 2023 Projected			7.2%

14 As shown in the above table, in 2024 property taxes are forecast to increase by 5.3 percent
15 from 2023 Approved and increase by 7.2 percent compared to 2023 Projected. Approximately
16 two-thirds of the increase in the 2024 Forecast compared to 2023 Projected is due to higher in-
17 lieu taxes as discussed below. The remainder is driven by construction activities and market
18 value assessment increases, partly offset by decreases in tax rates. The most significant drivers
19 of the forecast changes are as follows:

- 1 1. **Changes in Tax Rates.** Tax rates are expected to change for 2024 as follows:
- 2 a) Municipal tax rates are expected to increase on average by 3.0 percent across FEI's
- 3 operating municipalities; however, these increases will be tempered by the legislated
- 4 rate cap on Utility properties of \$40.00 / \$1,000.00, as many municipalities are
- 5 already at the rate cap;
- 6 b) School rates are expected to decrease by 1.2 percent based on the actual legislated
- 7 utility rate change in 2023 of \$12.57 / \$1,000.00 from the 2022 rate of \$12.72 /
- 8 \$1,000.00;
- 9 c) Rural general rates are expected to decrease by 0.3 percent based on the historical
- 10 10-year compounded average growth rate;
- 11 d) Tax rates on First Nations are expected to decrease by 0.1 percent; and
- 12 e) Other rates are expected to range from increases of 2.2 percent for some First
- 13 Nations to decreases of 2.0 percent for rural areas.
- 14 2. **Changes in Revenues to Calculate Grants In-lieu of Taxes.** Revenues reported to
- 15 municipalities are expected to increase by 28.8 percent compared to 2023 Projected based
- 16 on actual revenues applicable to the taxation year. Increases in the cost of gas led to higher
- 17 revenues used to derive the 2024 grants in-lieu. Grants in-lieu of taxes are based on a fixed
- 18 percentage of revenues; the overall increase in revenues reported to municipalities
- 19 increases the grants in-lieu of taxes due.
- 20 3. **Changes in Assessed Values.** Forecast changes in the assessed values of FEI's property
- 21 are based on expected inflationary changes to BC Assessment legislated improvement
- 22 rates, pipeline additions and land values. Increases forecast are based on the historical five
- 23 year compounded annual growth rate. For 2024, land and improvements have been
- 24 included together:
- 25 a) A 6.5 percent increase in assessed values of distribution lines and services plus
- 26 additional new construction;
- 27 b) An 11.3 percent increase in assessed values of transmission lines;
- 28 c) A 9.7 percent increase in assessed values for LNG land and improvements; and
- 29 d) A 9.7 percent increase in office properties.
- 30 Any variances from the forecast of property taxes included in rates will be recorded in the Flow-
- 31 through deferral account and will be returned to or collected from customers in the following
- 32 year.

1 **9.3 INCOME TAX**

2 FEI is subject to corporate income taxes imposed by the Federal and BC governments. Current
3 income taxes have been calculated using the flow-through (taxes payable) method, consistent
4 with BCUC-approved past practice, at the corporate tax rate of 27 percent for 2024, which is
5 unchanged from 2023. The corporate tax rates used in this Application are based on the
6 *Canada Income Tax Act* and the *BC Income Tax Act* enacted legislation and are updated each
7 year as part of the annual rate setting process.

8 Income tax for 2024 is forecast to increase by \$16.653 million or 32.2 percent compared to 2023
9 Approved. The largest driver of the increase in 2024 is lower income tax deductible through
10 capital cost allowance (CCA) by approximately \$12.284 million. The lower deductibility is partly
11 due to reduced undepreciated capital cost (UCC) additions in higher rate CCA classes in the
12 2024 Forecast compared to 2023 Approved, and partly due to the phase-out of Canada's
13 Accelerated Investment Incentive starting from 2024 (i.e., enhanced 50 percent first-year
14 allowance to be phased out in 2024).⁵⁵

15 Any tax rate variances and variances in income taxes on items that are flowed through in rates
16 are subject to flow-through treatment.

17 All other differences in income tax expense are subject to earnings sharing.

18 **9.4 SUMMARY**

19 FEI has forecast its property and income taxes on a basis consistent with prior years, utilizing
20 enacted legislation for income taxes and forecast changes in property tax rates and
21 assessments.

⁵⁵ <https://www.canada.ca/en/revenue-agency/services/tax/businesses/topics/sole-proprietorships-partnerships/report-business-income-expenses/claiming-capital-cost-allowance/accelerated-investment-incentive.html#AppPhaseOut>

10. EARNINGS SHARING AND RATE RIDERS

10.1 INTRODUCTION AND OVERVIEW

In this section, FEI discusses earnings sharing and the calculation of its delivery rate riders. FEI proposes to distribute a \$6.989 million pre-tax credit (\$5.102 million after-tax) earnings sharing amount to customers as part of 2024 delivery rates. FEI has also set out the BVA, RSAM, Fort Nelson Residential Common Rate Phase-in and Clean Growth Innovation Fund (CGIF) rate riders for 2024 and provides details on the CGIF, which is funded through the collection of the CGIF rate rider.

10.2 EARNINGS SHARING

In the MRP Decision (at page 82), the BCUC approved an earnings sharing mechanism from 2020 to 2024 whereby 50 percent of the achieved ROE above or below the allowed ROE will be shared with customers. Since FEI is unable to determine final earnings sharing until all items required for the ROE calculation are known, including the final rate base, there is a lag in when FEI distributes earnings sharing amounts. This is consistent with the calculations of formula O&M and growth capital, where the true-up of the formula inputs happens only once actuals are known. Thus, for 2024 delivery rates, it is the 2022 formula O&M, 2022 growth capital, and 2022 earnings sharing amounts that are calculated and impact rates in 2024.

For 2024, FEI proposes to distribute a \$6.989 million pre-tax credit (\$5.102 million after-tax) to customers, comprised of:

- The \$4.579 million credit difference between the projected 2022 deferral account after-tax credit addition of zero embedded in 2023 delivery rates, and the actual 2022 deferral account after-tax credit addition of \$4.579 million as provided in FEI's 2022 Annual Report to the BCUC;
- The \$0.134 million credit difference between the projected 2022 financing addition of \$0.049 million credit⁵⁶ and the actual 2022 financing addition of \$0.183 million credit, as provided in FEI's 2022 Annual Report to the BCUC;
- The \$0.257 million credit difference between the forecast 2023 financing addition of \$0.007 million credit⁵⁷ embedded in 2023 delivery rates, and the projected 2023 financing addition of \$0.264 million credit embedded in this Application; and
- 2024 forecast financing of a \$0.132 million credit.⁵⁸

⁵⁶ Annual Review for 2023 Delivery Rates, Section 10.2.

⁵⁷ Annual Review for 2023 Delivery Rates, Evidentiary Update dated October 24, 2022, Schedule 12, Line 22, Column 4.

⁵⁸ Section 11, Schedule 12, Line 24, Column 4.

1 FEI proposes to distribute \$6.989 million to customers in 2024 as a reduction in 2024 revenue
2 requirements through amortization of the projected 2024 opening after-tax balance and 2024
3 financing of \$5.102 million in the MRP Earnings Sharing deferral account.

4 As part of future rate filings, the actual earnings sharing for 2023 will be distributed to or
5 collected from customers in a similar manner as described above, which will account for the
6 actual 2023 ROE variance from approved.

7 **10.3 RATE RIDERS**

8 There are three delivery rate riders that are set through the annual review process. These are
9 the BVA Rate Rider, the RSAM Rate Riders, and the Fort Nelson Residential Common Rate
10 Phase-in Rate Rider. Additionally, pursuant to the MRP Decision, FEI was approved to collect a
11 basic charge fixed rate rider of \$0.40 per month from all non-bypass customers for the term of
12 the MRP to support FEI's CGIF activities.

13 **10.3.1 BVA Rate Rider**

14 The 2023 BVA rate rider was approved on a permanent basis by Order G-352-22. The following
15 supports the BVA rate rider for 2024.

16 On August 12, 2016, the BCUC issued Order G-133-16 and the accompanying Decision in the
17 matter of the Biomethane Energy Recovery Charge (BERC) Rate Methodology Application
18 (2016 Biomethane Decision). The 2016 Biomethane Decision approved the Short Term BERC
19 rate based on a premium of \$7 per GJ above the Conventional Gas Cost (defined as the sum of
20 the Commodity Cost Recovery Charge, the carbon tax and any other taxes applicable to
21 conventional natural gas sales). The Long Term BERC rate is to be set at a \$1 per GJ discount
22 to the Short Term BERC rate.

23 FEI also received approval to amortize/transfer the net of tax year-end balance in the BVA, after
24 adjustment for the value of unsold biomethane quantities, to a BVA Rate Rider Account for
25 recovery from, or refund to, all non-bypass customers via a delivery rate rider effective January
26 1 of the subsequent year.

27 In the 2016 Biomethane Decision, FEI was directed to provide the following information:

- 28 • A continuity schedule showing the breakdown of the forecast December 31st balance in
29 the BVA to be recovered by the BVA Rate Rider by year including sufficient supporting
30 details.
- 31 • The calculation of the BVA Rate Rider by rate class.
- 32 • A continuity schedule showing the forecast, actual and variance (actual – forecast)
33 biomethane revenues and volumes sold (GJ) by rate class, type of contract (short
34 term/long term) and year.

- 1 • Number of customers in each rate class.

2 FEI provides the requested information below for the projected closing 2023 balance of the BVA
3 rate rider account, and the calculation of the BVA Rate Riders for 2024.

4 **10.3.1.1 BVA Rate Rider Account**

5 The BVA balance at the end of December 31, 2023 is projected to be a debit of \$84.158 million
6 before-tax.⁵⁹ This balance consists of the 2022 ending inventory balance of \$20.298 million plus
7 a projected \$89.186 million in costs to acquire biomethane less \$25.326 million of recoveries by
8 way of the BERC. FEI projects 3,165.7 TJ of biomethane to remain in inventory at the end of
9 2023.

10 The amount transferred from the BVA to the BVA rate rider account is determined on an after-
11 tax basis. The after-tax balance in the BVA before transfer to the BVA rate rider account is
12 projected to be \$61.435 million.⁶⁰

13 The following table summarizes the BVA rate rider account and shows both the projected after-
14 tax ending 2023 balance of \$34.013 million⁶¹ and the \$27.422 million⁶² transfer to the BVA rate
15 rider account.

⁵⁹ Table 10-1, Line 17.

Notes

- (a) The annual forecast is an updated 2023 forecast
 (b) Recorded opening balance reconciles to the December 31, 2022 balance in the FortisBC Energy Inc. 2022 BVA Status Report.

	2022 Recorded	2023 Projected
Calculation of Adjustment for Unsold Biomethane		
Beginning Quantity Unsold Biomethane (in TJ)	208.7	1,379.1
Biomethane Purchased (in TJ)	2,294.8	3,809.7
Biomethane Sold (in TJ)	(1,124.3)	(2,023.1)
Ending Total Biomethane Unsold (in TJ)	1,379.1	3,165.7
BERC rate in effect at forecast (in \$/GJ)		
January 1st effective BERC rate (in \$/GJ)	\$ 14.718	\$ 14.718
Value of Unsold Biomethane at December 31st	\$ 20,297.9	\$ 46,593.1

- (d) Pursuant to Order G-133-16, and the Decision issued concurrently, the net of tax balance at December 31, 2023, after adjustment for the value of unsold biomethane quantities, will be transferred to the BVA Rate Rider Account for recovery from / refund to all non-bypass customers.

2
3

1 **10.3.1.2 BVA Rate Rider Calculation**

2 The cumulative BVA rate rider for recovery in 2024 is forecast at \$36.368 million and is
3 recovered from non-bypass customers through a rate rider based on 2024 Forecast volumes.
4 The \$36.368 million to be collected consists of the 2022 Projected recovery credit variance of
5 \$1.197 million⁶³ plus the \$27.422 million after-tax debit transferred from the BVA grossed up to
6 a before-tax debit value of \$37.565 million.⁶⁴

7 To calculate the BVA rate rider, the projected BVA rate rider account balance of \$36.368 million
8 is divided by the 2024 Forecast non-bypass customer volume of 201,034 TJ, which results in a
9 BVA rate rider of \$0.181 per GJ. Any difference between the actual and forecast BVA rate rider
10 amount collected will be trued up in the subsequent year. Details of the BVA rate rider
11 calculation are provided in Table 10-2 below.

12 **Table 10-2: 2022 BVA Rate Rider Calculation**

Line No	Particulars	BVA Rider Projected 2023		Non-Bypass
		(\$000s)	(\$000s)	Forecast 2024

26	Calculation BVA Rider Per (\$/GJ) Flat Rate		\$ 0.181	

14 In the 2016 Biomethane Decision, FEI was directed to provide a continuity of forecast, actual
15 and variance (actual - forecast) biomethane (BERC) revenues and volumes sold by rate
16 schedule, and type of contract.

⁶³ The \$1.197 million represents a combined adjustment for the 2022 Actual and Projected BVA balance transfer variance and the 2023 recovery variance because of the 2023 volume projection variance.

⁶⁴ Table 10-2, Line 5.

1 The following table breaks down the BERC revenues and volumes by rate schedule and by
2 short-term and long-term contracts. In 2023, the projected recoveries are \$25.326 million
3 attributable to sales volumes of 2,023 TJ from 11,964 RNG customers. The expected sales
4 volume from existing and projected long-term contracts is included in the 2023 Projected
5 volume and revenue in Table 10-3 below.

6 **Table 10-3: BERC Revenue and Volume**

Line No.	Volume and Revenue	2022 Actual	2022 Projected	2022 Variance	2023 Projected

1 In the 2016 Biomethane Decision, FEI was also directed to provide the number of customers by
2 rate schedule. The following table sets out the 2023 Projected number of renewable natural gas
3 customers by rate schedule.

4 **Table 10-4: RNG Customers by Rate Schedule**

2023 RNG Projected Participation (Rate Schedule)	Customer Enrollment
Short Term	
Rate Schedule 1B	11,586
Rate Schedule 2B	297
Rate Schedule 3B	57
Rate Schedule 11B	2
Rate Schedule 5B	18
Rate Schedule 30 Off System	-
Long Term	
Rate Schedule 11B	4
Total	11,964

5
6 In summary, the 2024 BVA rate rider attributable to the cumulative December 31, 2023 transfers
7 from the BVA is \$0.181 per GJ recoverable from all non-bypass customers.

8 **10.3.2 RSAM Rate Riders**

9 The RSAM Rate Riders collect or refund the previous year's Projected RSAM balance from
10 Rate Schedule 1, 2, 3 and 23 customers over two years. The Projected balance in the RSAM
11 account at the end of 2023 is a credit of \$22.248 million. The calculation of the 2024 RSAM
12 riders is shown in Table 10-5.

1 **Table 10-5: 2024 RSAM Riders**

2023 RSAM + Interest Closing Balance (\$000)	(22,248)
Amortization Period (Years)	<u>2</u>
2024 Amortization Post-Tax (\$000)	(11,124)
Tax Rate	<u>27%</u>
2024 Amortization Pre-Tax (\$000)	<u>(15,238)</u>

RSAM (Rider 5) Calculation

Rate Class	RSAM		Rider (\$/GJ)
	Amortization (\$000)	2024 Volume (TJ)	
Rate 1/1BU/1U/1X		83,378.5	(0.106)
Rate 2/2BU/2U/2X		29,678.8	(0.106)
Rate 3/3BU/3U/3X		27,002.0	(0.106)
Rate 23		3,637.1	(0.106)
	<u>(15,238)</u>	<u>143,696.4</u>	<u>(0.106)</u>

2
3 The differences that result from the actual 2023 ending RSAM balance varying from the
4 projection, and the actual 2024 volumes varying from the forecast set out in this filing, will be
5 included in the calculation of the 2025 RSAM Riders and, in this way, refunded to or collected
6 from customers.

7 **10.3.3 Fort Nelson Residential Customer Common Rate Phase-in Rate Rider**

8 Pursuant to Order G-278-22, FEI is approved to phase-in the implementation of common rates
9 to the Fort Nelson service area (FEFN) residential customers over a five-year period through the
10 Fort Nelson Residential Customer Common Rate Phase-in Rate Rider. The rider is to be
11 calculated each year as part of FEI's Annual Review and is based on the updated forecast of
12 FEFN's residential customer demand and the remaining balance of the deferral account each
13 year over the five-year phase-in period.

14 Table 10-6 below provides the calculation of the Fort Nelson Residential Customer Common
15 Rate Phase-in Rate Rider, which is a credit of \$0.863 per GJ for 2024:

1 **Table 10-6: 2024 Fort Nelson Residential Customer Common Rate Phase-in Rider**

Line	Particular	Reference	2024
1	FEFN (RS 1) Delivery Margin @ Existing Rate w/o Rider (\$000s)		1,678
2	FEFN (RS 1) Delivery Margin (RS 1) @ Existing Rate w/ Rider (\$000s)		1,440
3	Incremental Delivery Margin from FEFN RS 1 (\$000s)	Line 1 - Line 2	238
4			
5	Effective Incremental Delivery Rate (\$/GJ)	Line 3 / Line 12	1.016
6	Annual Incremental of Phase-In (\$/GJ)	Line 5 / 4 Years (Remaining)	0.254
7			
8	FEFN Residential Common Rate Phase-in (\$/GJ)	-(Line 5 - Line 6)	(0.762)
9	2021 FEFN Surplus Revenue (\$/GJ)	2023 Annual Review - Evidentiary Update; Table A-6; Line 9	(0.101)
10	Total FEFN Residential Common Rate Phase-in Rider (\$/GJ)	Line 8 + Line 9	(0.863)
11			
12	2024 FEFN Residential Demand Forecast (TJ)		234.3

3 **10.3.4 Clean Growth Innovation Fund (CGIF)**

4 The collection of the \$0.40 per month innovation rider commenced on August 1, 2020 and is
5 forecast to collect approximately \$5.229 million in 2024 based on the forecast average non-
6 bypass customer count for 2024.

7 Table 10-7 below shows the amounts collected and the amounts expended for clean growth
8 projects since the inception of the Fund to the end of 2024. In total, approximately \$3.681 million
9 of actual expenditures have been invested up to June 2023, with a further \$3.267 million
10 projected to the end of 2023, and \$5.773 million for 2024.

11 **Table 10-7: Clean Growth Innovation Fund 2021-2024 Deferral Account Continuity (\$ millions)**

	Actual 2020	Actual 2021	Actual 2022	Actual Jan-June 2023	Projected July-Dec 2023	Forecast 2024
Opening Balance	\$ -	\$ (0.791)	\$ (3.816)	\$ (7.186)	\$ (8.888)	\$ (8.594)
Gross Additions	1.022	1.127	0.972	0.560	3.267	5.773
Rider recoveries	(2.099)	(5.093)	(5.176)	(2.591)	(2.591)	(5.229)
Tax	0.291	1.071	1.135	0.548	(0.182)	(0.147)
AFUDC	(0.005)	(0.130)	(0.301)	(0.219)	(0.200)	(0.458)
Closing Balance	\$ (0.791)	\$ (3.816)	\$ (7.186)	\$ (8.888)	\$ (8.594)	\$ (8.655)

13 To date, FEI has completed seven portfolio reviews with approved spending of \$8.5 million. FEI
14 anticipates that it will approve two additional portfolios by year-end 2023. The fund approvals
15 are generally focused on the production and delivery of renewable gases (renewable natural
16 gas, syngas, hydrogen), carbon capture, as well as funding FEI's participation in broad low-
17 carbon research activities such as the Low-Carbon Resource Initiative, which is a joint initiative
18 between the Electric Power Research Institute and GTI Energy to accelerate the development
19 and demonstration of low- and zero-carbon energy technologies.

20 Pursuant to the MRP Decision and Order G-165-20, FEI is directed to return any unused
21 balance in the CGIF at the end of the MRP term through a disposal mechanism subject to

1 approval by the BCUC. FEI will address this directive from the MRP Decision in its upcoming
2 multi-year rate plan application which will be filed early in 2024. At that time, FEI will have a
3 more accurate estimate of the unused balance in the CGIF, as FEI will have a full year of 2023
4 actual spending information and will have more certainty on the projected spending for 2024.

5 **10.3.4.1 Governance**

6 FEI committed to and has established two employee groups with oversight of the CGIF. First,
7 the Innovation Working Group (IWG) is responsible for the identification, evaluation, selection,
8 and execution of projects. The IWG is comprised of FEI staff that provide subject matter
9 expertise from a variety of departments key to assessing the technical and business proposals
10 which are part of the portfolios.

11 Second, the Executive Steering Committee (ESC) has been established to provide strategic
12 direction to the CGIF and to approve the funding for the portfolios recommended by the IWG
13 and reviewed by the External Advisory Council (EAC).

14 The EAC is made up of a variety of FEI stakeholders to provide insight and feedback on the
15 Company's innovative initiatives on a periodic basis. The EAC includes the following
16 stakeholders:

- 17 • MoveUP;
- 18 • BCSEA;
- 19 • BC Ministry of Energy, Mines and Low-Carbon Innovation;
- 20 • Foresight Cleantech Accelerator Centre;
- 21 • BC Bioenergy Network; and
- 22 • University of Victoria.

23 **10.3.4.2 Spending Commitments**

24 Since the Annual Review for 2023 Delivery Rates, approximately \$4.3 million has been
25 approved for spending in Portfolios 5, 6 and 7. As is common during the evaluation of CGIF
26 portfolios, a number of proposals were rejected at various stages of review because they did not
27 meet CGIF criteria.

28 **Table 10-8: Approved and Actual/Forecast Expenditures (\$ millions)**

	Actual 2020	Actual 2021	Actual 2022	Actual Jan-June 2023	Projected July-Dec 2023	Forecast 2024
Portfolio Approvals	\$ 1.500	\$ 2.200	\$ 1.526	\$ 3.348	\$ 2.850	\$ 8.000
Portfolio Expenditures	\$ 1.022	\$ 1.127	\$ 0.972	\$ 0.560	\$ 3.267	\$ 5.773

1 Note to Table:

2 *Portfolio Expenditures are equal to the Gross Additions in Table 10-7.*

3 As can be seen from Table 10-8, Portfolio Approvals have been steadily increasing since the
4 approval of the CGIF, with a total of \$6.198 million projected in 2023 and an additional \$8 million
5 in 2024.

6 The forecast 2024 Portfolio Approvals are based on several expectations. First, the \$10 million
7 NGIF Global Cleantech Challenge⁶⁵ is currently underway and FEI expects to approve
8 approximately \$1 million in grants based on assessment of proposals thus far. This is in addition
9 to the 2024 annual NGIF operating fees, expected to be approximately \$0.35 million, and two
10 additional NGIF calls for proposals in 2024 (approximately \$1.5 million). FEI has also initiated its
11 first collaborative call for innovation with the BC Centre for Innovation and Clean Energy (CICE).
12 As part of a \$6 million Forest Residue Management challenge⁶⁶, CICE and the CGIF are
13 encouraging proposals that will help promote the sustainable utilization of wood waste and in
14 the process reduce wildfire risks. In particular, FEI will invest up to \$3 million in proposals that
15 meet CGIF criteria and create biomethane, hydrogen and syngas or provide nature-based
16 carbon sequestration. In addition, FEI expects to approve up to \$4 million in grants for FEED
17 studies and pre-commercial-scale projects such as low-carbon gaseous fuel production facilities
18 and hydrogen end-use projects similar to those mentioned below.

19 Expenditures have lagged approvals, with approximately \$3.681 million of actual expenditures
20 versus \$8.574 million of approvals to the end of June 2023. FEI expects expenditures of \$3.267
21 million to occur by the end of 2023, which comprise the following⁶⁷:

- 22 • **\$0.3 million** for the University of British Columbia / University of Victoria Hydrogen
23 Blending Lab approved in Portfolio 1;
- 24 • **\$0.4 million** for FEI's membership in the Low Carbon Resources Initiative approved in
25 Portfolio 3;
- 26 • **\$1.4 million** for projects approved in Portfolios 5, 6 and 7;
- 27 • **\$0.8 million** on an advanced hydrogen electrolyzer pilot in Burnaby that was approved
28 in Portfolio 7, but is awaiting confirmation of PacifiCan funding and a contribution
29 agreement;
- 30 • **\$0.3 million** on a hydrogen pyrolysis FEED study for a BC deployment of the technology
31 which is tentatively approved pending a contribution agreement; and
- 32 • **\$0.2 million** on a hydrogen refuelling pre-FEED study for a BC deployment of the
33 technology which is tentatively approved pending a contribution agreement.

⁶⁵ <https://www.ngif.ca/global-cleantech-challenge/>.

⁶⁶ <https://cice.ca/knowledge-hub/cice-fortisbc-cgif-call-for-innovation-forestry-residue-management/>.

⁶⁷ Amounts listed below total to \$3.4 million due to rounding.

1 **10.3.4.3 Investment Profile**

2 Grants from the CGIF are focused on several application areas critical for decarbonizing FEI's
3 gas system: production, distribution and end-use. Production applications are related to creating
4 renewable, low-carbon hydrogen, RNG and syngas for distribution through the gas network or
5 direct end-use near the production facility. Distribution applications focus on accommodating
6 renewable hydrogen in the existing gas system. Finally, end-use applications focus on more
7 effective uses of energy sources and the ability to use renewable fuels in end-use applications
8 (with a specific category for transportation), creating hybrid energy systems that efficiently use
9 both gaseous fuels and electricity.

10 Overlaying these three application areas are generalized low-carbon investments and carbon
11 capture, utilization and storage (CCUS), categories described in further detail below.

12 The total approved investment in these application categories, and subcategories, is shown in
13 Table 10-9.

14 **Table 10-9: CGIF Approved Investment by Application (\$ millions)⁶⁸**

Application	Sub-Application	Approved Grant
Production	Renewable Hydrogen	2.237
	Renewable Natural Gas	1.388
	Renewable Syngas	0.370
	Subtotal	3.995
Distribution	Renewable Hydrogen	0.500
	Subtotal	0.500
End-Use	Renewable Hydrogen	0.407
	Hybrid Systems	0.280
	Renewable Natural Gas	0.120
	Subtotal	0.808
Carbon Capture	End-Use	0.345
	Storage	0.600
	Subtotal	0.945
General Low-Carbon	General Initiatives	2.326
	Subtotal	2.326
TOTAL		8.574

15
16 These five areas of investment are detailed below.

⁶⁸ The total approved amount of \$8.574 million equals the actual approvals up to June 30, 2023 (i.e., sum of Actual 2020, Actual 2021, Actual 2022 and Actual Jan-June 2023 in Table 10-8).

1 **Production (Upstream)**

2 These investments are related to the production of low-carbon gases for use in the existing FEI
3 gas distribution network or for direct consumption by larger customers.

4 The CGIF has been providing grants for novel methods of producing renewable, low-carbon
5 hydrogen in two ways: electrolysis and pyrolysis. Electrolysis requires water and low-carbon
6 electricity and produces hydrogen by splitting water into hydrogen and oxygen molecules.
7 Pyrolysis produces low-carbon hydrogen by “cracking” methane and other hydrocarbons (the
8 main component of natural gas) into hydrogen and solid carbon.

9 In total, the CGIF approved grants to 13 different renewable hydrogen production projects. One
10 example is a Vancouver-based company that makes a novel non-catalytic pulse methane
11 pyrolysis system for low-cost, clean, H₂ production using natural gas as a feedstock, and with a
12 solid carbon by-product. The CGIF grants (along with other funding) allowed the start-up to build
13 a proof-of-concept reactor in 2021 and to complete the commissioning of a brass board system
14 in 2023. The nominal capacity of the brass-board system will be 200 kgH₂/day. Developments
15 thus far have resulted in the Vancouver-based company receiving \$79 million in equity
16 investments from a diverse set of investors.

17 The CGIF has also been providing grants for organizations that are advancing the production of
18 low-carbon RNG (or biomethane). These expenditures have been focused on two primary
19 areas: improving the efficiency of existing RNG production facilities and expanding the range of
20 feedstocks from which RNG can be created.

21 An example of an RNG efficiency project in which the CGIF is investing is the Metro Vancouver
22 effort to develop technology that will boost the methane content of RNG produced by anaerobic
23 digestion at their wastewater treatment plants.

24 The CGIF has also approved funding for an effort by UBC and the BC Bio-Alliance to advance a
25 two-stage steam-oxygen gasification technology that creates RNG and syngas from woody
26 biomass. Woody biomass is a potential significant source of RNG in BC that is largely untapped.

27 Similarly, the CGIF is providing a grant to a BC-based company and an Interior pulp mill to
28 scale-up a technology to create low-carbon syngas from wood waste and displace natural gas
29 use in the existing lime kiln.

30 **Distribution**

31 Approved in Portfolio 1 is the Hydrogen Lab that has been established at UBC Okanagan and
32 the University of Victoria.

33 The Hydrogen Lab is providing valuable insights into seven specific areas that are important to
34 understand as FEI moves toward blending low-carbon hydrogen into the existing natural gas
35 infrastructure (hydrogen-enriched natural gas or HENG).

- 1 Subproject 1: Analytical modelling of injection and transmission of HENG.
- 2 Subproject 2: Detonation and flammability of HENG.
- 3 Subproject 3: Hydrogen embrittlement of metal alloys and welded joints.
- 4 Subproject 4: Real-time portable sensing system for monitoring of HENG mixing and
5 leak detection.
- 6 Subproject 5: Machine learning-based modelling and design of an integrated HENG
7 process control system based on simulation and operational data.
- 8 Subproject 6: Effect of HENG on thermoacoustic oscillations and burning rate of partially
9 premixed flames.
- 10 Subproject 7: Separation of hydrogen gas from HENG.

11 **End-Use**

12 CGIF end-use grants are provided for three sub-applications: HENG or hydrogen end-use
13 product development; hybrid system development; and transportation.

14 Approved HENG and hydrogen-compatible end-use investments include development and
15 testing by a Calgary-based company of a 100 percent hydrogen compatible residential furnace
16 in addition to two approved investments in companies making HENG-compatible combined heat
17 and power (CHP) units for residential and small commercial deployments. CHP units can
18 produce both electric power and heat, so they are both a low-carbon end-use product and a
19 technology capable of mitigating peak demand and providing resiliency in the electric system.

20 A hybrid system grant was provided for testing of a commercial building installation of a CHP
21 combined with solar panels and a custom control system. As previously reported, the system
22 functioned well but the underlying costs were too high. Continued reductions in technology costs
23 are likely to favourably change the cost-effectiveness of these types of solutions.

24 The CGIF also funded a study initiated by the Greenhouse Growers' Association members and
25 United Flower Growers members who rely heavily on the use of natural gas for the provision of
26 heat and plant growth (currently accounting for approximately 12 percent of the cost structure
27 for greenhouses). The grant for the study focused on:

- 28 • Low-carbon heating options, including RNG and associated reduced GHGs;
- 29 • Emerging technology review (including energy storage, heating, carbon capture, and
30 conservation and efficiency);
- 31 • Lighting and heating, including examination of the use of CHPs for meeting heating
32 loads and offsetting electricity costs;
- 33 • Heating decarbonization options (technology and fuel supply);

- 1 • GHG emissions including carbon capture and offsets;
- 2 • Hydrogen generation and CO₂ to produce synthetic methane;
- 3 • Carbon capture and use, as well as storage and sequestration; and
- 4 • Evaluation of the cost impacts and energy implications of HENG.

5 Finally, the CGIF provided a grant for university research which characterized the GHG
6 emission reductions from the use of natural gas/RNG instead of diesel in marine engines. The
7 research has been helpful in establishing LNG as a lower-carbon marine transportation fuel in
8 BC.

9 **Carbon Capture**

10 Grants in this category have been divided into two sub-categories: end-use and storage. End-
11 use carbon capture expenditures focus on capturing and purifying carbon dioxide post-
12 combustion. In some cases, the carbon dioxide is converted into other marketable products and
13 in others the carbon dioxide is being selectively captured for permanent storage.

14 Carbon capture storage grants are focused on taking captured carbon dioxide and permanently
15 transforming it into a non-GHG form such as a mineral or permanently storing it.

16 CGIF funding was approved for a carbon capture project being undertaken by a Calgary
17 company developing modular, containerized carbon capture systems using patented membrane
18 contactors to replace conventional spray tower and absorbers. The result is expected to be a 30
19 percent increase in efficiency and a 50 percent reduction in absorber size, significantly
20 decreasing carbon capture capital and operating costs. The company is currently raising capital
21 for a significant expansion and move to commercialization.

22 The CGIF has also provided funding for two GeoscienceBC-led initiatives related to carbon
23 storage. One is for a pilot that will test the ability of certain rock formations to permanently
24 mineralize (and therefore sequester) gaseous carbon dioxide, and the other is for a
25 comprehensive geological study of the Georgia basin to assess the potential for permanent
26 carbon storage.

27 **Generalized Low-Carbon**

28 These expenditures are related to low-carbon initiatives that broadly advance decarbonization of
29 the gaseous fuel distribution system. Included in this category is FEI's share of the annual
30 operating expenses of the Canadian Gas Association's NGIF, of which FEI is a member with
31 several other Canadian utilities and oil and gas producers. In total, 27 of the 40 proposals
32 approved for funding by the CGIF are NGIF projects that are co-funded with other Canadian
33 utilities and oil and gas producers. This category also includes FEI membership fees related to
34 its participation in the Low Carbon Resource Initiative, approved in Portfolio 3.

1 **10.4 SUMMARY**

2 As discussed in Section 10.2 above, FEI proposes to distribute a \$6.989 million pre-tax credit
3 (\$5.102 million after-tax) earnings sharing amount to customers as part of 2024 delivery rates.
4 In Section 10.3, FEI updated all of the 2024 delivery rate riders for 2023 Projected ending
5 balances and 2024 Forecast volumes. Based on these updates, FEI has calculated a BVA rate
6 rider of \$0.181 per GJ, an RSAM credit rate rider of \$0.106 per GJ, and the Fort Nelson
7 Residential Customer Common Rate Phase-in rate rider of \$0.863 per GJ for 2024. FEI has
8 also provided details on the CGIF in Section 10.3.4, which is funded through the collection of
9 the basic charge CGIF rider.

12. ACCOUNTING MATTERS AND EXOGENOUS FACTORS

12.1 INTRODUCTION AND OVERVIEW

In this section, FEI discusses “Exogenous Factors” under its MRP, providing an update on the potential exogenous factor for the impacts of flooding in 2021. FEI also discusses emerging accounting guidance, and the status of its non-rate base deferral accounts. With respect to its non-rate base deferral accounts, FEI provides information on the Regional Gas Supply Diversity (RGSD) Development deferral account and the Flow-through deferral account.

12.2 EXOGENOUS (Z) FACTORS

FEI is permitted to adjust the cost of service for “Exogenous Factors” under the MRP. The BCUC established the following criteria for evaluating whether the impact of an event qualifies for exogenous factor treatment:

1. The costs/savings must be attributable entirely to events outside the control of a prudently operated utility;
2. The costs/savings must be directly related to the exogenous event and clearly outside the base upon which the rates were originally derived;
3. The impact of the event was unforeseen;
4. The costs must be prudently incurred; and
5. The costs/savings related to each exogenous event must exceed the BCUC-defined materiality threshold.

The materiality threshold (item 5) for FEI has been established at \$0.500 million, as approved in the MRP Decision.

12.2.1 Update on 2021 Flooding Damage Exogenous Factor

In the Annual Review for 2023 Delivery Rates, FEI identified one new potential exogenous factor related to the flooding damages in 2021 caused by a series of atmospheric rivers that brought heavy rain to parts of southern British Columbia. Details were provided on the damage to FEI’s assets and the impact to customers, along with the estimated total costs associated with repairing damage to its facilities and restoring service to affected customers.

As explained in the 2023 Annual Review, FEI filed an insurance claim to recover the total O&M and capital costs related to the flooding event which also included a claim to recover relief bill credits provided to customers related to the flooding incident. If FEI’s insurance claim is successful, FEI’s net incremental costs would be limited to the \$1 million insurance deductible.

1 However, until the insurance claim has been settled, FEI will not know the total cost related to
2 the flooding, as FEI may receive all, partial or no reimbursement.

3 **Current Status of Flood Damage Claim**

4 FEI submitted a flood damage claim in the amount of approximately \$3.7 million to its insurers in
5 October 2022. The claim represents costs incurred to repair damaged assets and customer bill
6 evacuation credits. Table 12-1 below provides a breakdown of each component of the claim.
7 The total costs recoverable are subject to the \$1 million insurance deductible.

8 **Table 12-1: Breakdown of Flooding Repair Costs Insurance Claim**

Zone/Department	City/Region	Damage/Loss Claim	
Zone 3	Abbotsford	\$	772,804
Zone 4	Merritt	\$	745,888
Zone 5	Princeton	\$	667,513
Zone 6	Roberts Creek	\$	431,147
Engineering	Across all regions above	\$	111,951
Transmission	Across all regions above	\$	178,218
Customer Service	Across all regions above	\$	826,139
Total Claim Submission		\$	3,733,660

9
10 The Insurers continue to review FEI's claim submission. Requests for additional information, or
11 responses to inquiry, have been provided by FEI on a timely basis. At this time, the amount of
12 the claim settlement, and timeframe, is uncertain; however, FEI is expecting a final decision
13 before the end of 2023.

14 When the insurance claim has been settled, FEI will determine if exogenous factor treatment is
15 warranted and will file for approval of exogenous factor treatment, if applicable, in an Evidentiary
16 Update or in a future rate filing.

17 **12.3 ACCOUNTING MATTERS**

18 In the following section, FEI provides information on emerging accounting guidance.

19 **12.3.1 Emerging Accounting Guidance**

20 In the 2014-2019 PBR Plan Decision and Order G-138-14, the BCUC directed FEI to
21 "communicate any accounting policy changes and updates to the Commission and other
22 stakeholders as part of the Annual Review process during the PBR period." While this directive
23 was not included as part of the MRP Decision, FEI will continue to provide accounting policy
24 changes and updates as part of the Annual Review materials.

25 There are no new accounting policy changes that FEI is proposing, or that are required to be
26 implemented under US GAAP, that result in a change in accounting for 2024.

1 **12.4 NON-RATE BASE DEFERRAL ACCOUNTS**

2 FEI maintains both rate base and non-rate base deferral accounts. Rate base deferral accounts
3 are included in rate base and earn a rate base return. In contrast, non-rate base deferral
4 accounts are outside of rate base and, subject to BCUC approval, attract a weighted average
5 cost of capital (WACC) return (which is equal to a rate base return).

6 In the following section, FEI provides information on the Regional Gas Supply Diversity (RGSD)
7 Development and Flow-through deferral accounts. Information on FEI's non-rate base earnings
8 sharing, BVA and CGIF deferral accounts is included in Section 10.

9 **12.4.1 New Deferral Accounts**

10 FEI is not seeking approval of any new non-rate base deferral accounts in this Application.

11 **12.4.2 Existing Deferral Accounts**

12 In the subsections below, FEI discusses the RGSD Development deferral account and the Flow-
13 through deferral account.

14 **12.4.2.1 Regional Gas Supply Diversity Development Deferral Account**

15 On September 14, 2022, the BCUC issued Order G-253-22 granting approval to establish the
16 RGSD Development deferral account, a non-rate base deferral account attracting FEI's WACC
17 return, to capture actual development costs incurred with respect to the potential RGSD Project,
18 with disposition of the deferral account balance to be determined in a future proceeding.

19 Order G-253-22 directed FEI to provide quarterly progress reports on work completed,
20 anticipated work, and material developments on the potential RGSD Project, starting with the
21 fourth quarter ending December 31, 2022, by no later than 30 days after the date of the quarter
22 end. Order G-253-22 further directed that in lieu of the July 2023 quarterly report, FEI was to
23 provide as part of the Annual Review for 2024 Delivery Rates (this Application) the following
24 information:

- 25 a. Reporting on work completed, anticipated work, and material developments on the
26 potential RGSD Project;
- 27 b. An update of the costs incurred to date; and
- 28 c. A proposal for the method and timing of the recovery of those incurred costs.

29 Please refer to Appendix C for item (a). In Appendix C, which is in a similar format as previous
30 quarterly progress reports on the RGSD Project, FEI describes the work completed and
31 anticipated as well as material developments.

32 With regard to items (b) and (c), FEI provides the following update on the costs incurred to date
33 and a proposal for the method and timing of the recovery of incurred costs.

12.4.2.1.1 PROJECT DEVELOPMENT COSTS INCURRED TO DATE FOR THE RGSD PROJECT

In the RGSD Development Account Application filed on June 1, 2022, FEI forecast total project development spending of \$23.7 million by Q3 2023, which would coincide with the timing of the 2024 Annual Review and thus be an appropriate time to seek cost recovery of the incurred costs. However, as of the end of Q2 2023, FEI has spent a total of \$2.93 million, including AFUDC. Table 12-2 provides a summary of the development costs on an annual and a project phase gate basis. For further information on the activities that FEI has undertaken thus far, please refer to Appendix C.

Table 12-2: Project Development Cost Summary

Actual Cost Summary – Calendar Year Basis			
2021	2022	2023	Total Cost
\$0.47 million	\$1.43 million	\$1.03 million	\$2.93 million
Actual Cost Summary – Phase Gate Basis			
Preliminary and Conceptual Phase (Pre-Phase 1) Nov 2021 to Sep 2022	Screening and Pre-FEED Phase (Phase 1) Oct 2022 to Jun 2023	Total Cost	
\$1.40 million	\$1.53 million	\$2.93 million	

12.4.2.1.2 RECOVERY OF INCURRED COSTS FOR THE RGSD PROJECT

As noted above and discussed in Section 2.3.3 of Appendix C, FEI has incurred approximately \$2.93 million as of the end of Q2 2023. In comparison, in the RGSD Development Account Application, FEI had forecast incurring costs of \$23.7 million for work up to Q3 of 2023. While there are still two months remaining until the end of Q3 2023, FEI does not anticipate incurring significant amounts of costs in these upcoming two months (and therefore does not expect to achieve the \$23.7 million in project development spending by Q3 2023).

In consideration of the amount spent to date and the screening analysis that FEI needs to undertake to have meaningful and comprehensive engagement and collaboration with stakeholders and Indigenous Nations prior to beginning the Project approval processes (as explained in Appendix C), and to have reasonable support and confidence on the Project concept and design, FEI considers it most appropriate to file for recovery of the RGSD Project development costs in a future application. The timing of when FEI will file for recovery of the costs will be driven by factors such as progress on the Project and costs incurred (and forecast to be incurred) to further advance Project development. Thus, FEI may file for recovery of the costs in a separate application or in a future annual review (or revenue requirement) application, depending on timing.

1 **12.4.2.2 Flow-Through Deferral Account (2020-2024)**

2 As approved through Order G-165-20, the Flow-through deferral account is used to capture the
3 annual variances between the approved and actual amounts for all costs and revenues which
4 are forecast annually, are not subject to earnings sharing, and which do not have a previously
5 approved deferral account. The specific items included in the Flow-through deferral account
6 were set out in Table C4-1 of the MRP Application, reproduced below.

1

Table 12-3: Variances Captured in the Flow-through Deferral Account

	FEI	FBC
<u>Delivery Revenues (FEI):</u>		
Residential and commercial use rate variances	RSAM	N/A
Customer variances	Flow-through deferral	N/A
Industrial and all other revenue variances	Flow-through deferral	N/A
<u>Revenues and Power Supply (FBC):</u>		
Revenue variances	N/A	Flow-through deferral
Power Supply variances net of PSI	N/A	Flow-through deferral
<u>Gross O&M:</u>		
Index-based O&M variances	Subject to earnings sharing	Subject to earnings sharing
BCUC fees variances	BCUC variances deferral	BCUC variances deferral
Pension & OPEB variances	Pension/OPEB variances deferral	Pension/OPEB variances deferral
All other O&M variances ^{1,3}	Flow-through deferral	Flow-through deferral
<u>Capitalized Overhead:</u>		
Capitalized overhead variances	No variance	No variance
<u>Depreciation and Amortization:</u>		
Depreciation rate variances	No variance	No variance
Depreciation on Clean Growth Projects ^{2,3}	Flow-through deferral	Flow-through deferral
Other depreciation variances	Subject to earnings sharing	Subject to earnings sharing
Amortization of deferrals	No variance	No variance
<u>Property Tax:</u>		
Property tax variances	Flow-through deferral	Flow-through deferral
<u>Other Revenues :</u>		
SCP Mitigation revenues variances	SCP Revenues deferral	N/A
CNG/LNG Recoveries variances	CNG/LNG Recoveries deferral	N/A
Revenues from Clean Growth Projects ^{2,3}	Flow-through deferral	Flow-through deferral
All other other revenue/income variances	Subject to earnings sharing	Subject to earnings sharing
<u>Interest Expense/Cost of Debt:</u>		
Interest on RSAM/CCRA/MCRA/Gas storage	Interest on RSAM/CCRA/MCRA/Gas Storage	N/A
Interest rate variances	Flow-through deferral	Flow-through deferral
Interest on Clean Growth Projects ^{2,3}	Flow-through deferral	Flow-through deferral
Other interest variances	Subject to earnings sharing	Subject to earnings sharing
<u>Income Tax:</u>		
Income tax rate variances	Flow-through deferral	Flow-through deferral
Income tax on Clean Growth Projects ^{2,3}	Flow-through deferral	Flow-through deferral
Other income tax variances	Subject to earnings sharing	Subject to earnings sharing

1: Including items forecast outside of the formula such as insurance premiums, NGT stations, biomethane, variable LNG production, integrity digs and EV charging stations.

2: Cost of service for NGT fueling stations and tankers, variable LNG production, and EV stations will be captured in the Flow-through deferral account.

3: Biomethane other revenues will continue to capture the actual cost of service of the biomethane capital assets and transfer it to the BVA

2

- 1 In accordance with the method set out in the table above, the calculation of the 2023 Projected
2 Flow-through amount of \$0.920 million debit is shown in Table 12-4 below. To calculate the
3 amount to be collected from customers, FEI has also included the following adjustments:
- 4 • The \$11.837 million debit difference between the projected ending 2022 deferral account
5 debit balance of \$19.006 million⁶⁹ embedded in 2023 delivery rates, and the actual
6 ending 2022 deferral account debit balance of \$30.843 million. A more detailed breakout
7 of the 2022 variance is provided in Table 12-5 below;
 - 8 • The \$0.670 million debit difference between the forecast 2023 financing addition of
9 \$0.506 million debit⁷⁰ embedded in 2023 delivery rates, and the projected 2023 financing
10 addition of \$1.176 million debit embedded in this Application; and
 - 11 • 2024 forecast financing of a \$0.357 million debit.⁷¹

2

3 **12.4.2.2.1 2023 PROJECTED FLOW-THROUGH VARIANCES**

4 As shown in Table 12-4 above, the 2023 Projected flow-through variance is \$0.920 million. The
5 variances in each flow-through category are described below.

6 The projected variances in delivery margin are primarily due to unfavourable industrial margin
7 as a result of lower LNG demand as described in Section 3, which is mostly offset by favourable
8 commercial and residential margin mainly as a result of higher customers than forecast.

9 The flow-through O&M amounts are discussed in Section 6. Amortization expense is equal to
10 the approved value. Variances in property taxes are explained in Section 9. Variances in Other
11 Revenue are explained in Section 5. The projected interest expense variances are derived from
12 FEI issuing a lower amount of debt in the fourth quarter of 2022 than forecast in the 2023
13 Annual Review, not projecting to issue any debt in 2023 whereas \$300 million was forecast to

1 be issued in the fourth quarter of 2023 in the 2023 Annual Review, and FEI projecting a higher
2 short-term interest rate than the approved short-term interest rate, as discussed in Section 8.
3 The income tax variance is derived as 27 percent of the variances described above.

4 An adjustment to include the difference between the projected and final actual amounts for 2023
5 subject to flow-through will be recorded in the deferral account in 2023 and amortized in 2025
6 rates.

7 **12.4.2.2.2 2022 FLOW-THROUGH DEFERRAL ACCOUNT TRUE-UP**

8 As mentioned above, FEI provides a breakout of the 2022 true-up amount of \$11.837 million
9 debit in Table 12-5 below, along with an explanation of the variances.

10 **Table 12-5: 2022 Actual vs. Projected Flow-through Deferral Account Additions (\$ millions)**

Line No.	Particulars	2022 Projected	2022 Actual	After-Tax Flow-Through Variance
	(1)	(2)	(3)	(4)
1	Delivery Margin			
2	Residential (Rate 1)	\$ (588.539)	\$ (588.430)	\$ 0.109
3	Commercial (Rate 2, 3, 23)	(269.214)	(268.914)	0.300
4	Industrial (All Others)	(135.619)	(120.247)	15.372
5				
6	Net O&M Expense			
7	Pension & OPEB	9.537	9.537	-
8	Insurance	11.552	11.485	(0.067)
9	Biomethane	3.249	4.156	0.907
10	NGT	1.944	2.193	0.249
11	Variable LNG Production Costs	7.053	6.708	(0.345)

25				
26	Other Revenues			
27	Late Payment Charges (2020/2021 exogenous portion)	1.185	1.185	-
28	SCP Third Party Revenue	(13.410)	(13.410)	-
29	NGT Tanker Rental Revenue	(0.850)	(0.718)	0.132
30	Biomethane Other Revenue	(0.812)	(0.812)	-
31	LNG Capacity Assignment	(18.039)	(18.039)	-
32	CNG & LNG Service Revenues	(3.270)	(3.010)	0.260
33				
34	Interest Expense			
35	Long-term debt interest expense variance	148.555	146.761	(1.794)
36	Interest variance on Clean Growth Projects/CPCNs/Exogenous Capital	-	(0.354)	(0.354)
37	Short-term debt rate variance	1.886	1.120	(0.766)
38	Short-term debt volume variance from long-term debt issue variance	-	0.843	0.843
39	Short-term debt timing variance from long-term debt issue timing	2.042	2.061	0.019
40				
41	Income Tax Expense			
42	Income tax variance on Clean Growth Projects/CPCNs/Exogenous Capital	-	2.574	2.574
43	Income tax/CCA rate changes	-	-	-
44	Income tax on taxable flowthrough variances above (excl. Clean Growth Projects/CPCNs/Exogenous Capital)	(2.859)	(6.575)	(3.716)
45				
46	2022 After-Tax Flow-Through Addition to Deferral Account (excluding Financing)			11.887
47				
48	2022 Financing True-up			(0.050)
49				
50	2022 Ending Deferral Account Balance True-up			11.837

11

1 The variances in delivery margin are primarily due to unfavourable industrial margin as a result
2 of lower LNG demand and the termination of the BC Hydro Island Cogeneration plant demand,
3 as discussed in Section 3 of the Application.

4 The flow-through components of O&M expense were \$0.906 million higher than projected, with
5 the main variance related to renewable gas development, which was \$0.833 million higher than
6 projected. The variance was mainly due to higher than expected contractor and professional
7 services costs required to assist with various activities in the areas of hydrogen and lignin
8 investigation and development. Please also refer to Section 6.3.6 of the Application.

9 Actual property tax expenses were \$1.617 million lower than projected due to differences in tax
10 rates. 2022 Projected amounts were calculated using actual 2022 assessment values but
11 estimated 2022 tax rates.

12 The flow-through components of Other Revenue were \$0.392 million lower than projected, with
13 the main variance related to CNG & LNG Service Revenues, which were \$0.260 million lower
14 than projected. The variance in CNG & LNG Service Revenues was mainly due to lower CNG
15 Station demand than forecast.

16 The variance between the actual (3.34 percent) and projected (4.05 percent) short-term debt
17 interest rates results in an amount to be returned to customers of \$0.766 million,⁷² shown on
18 Line 37 of Table 12-5 above. The long-term debt interest expense variance of \$1.794 million to
19 be returned to customers is due to lower issue costs than projected on the 2022 long-term debt
20 issuance. The net variance of \$0.862 million recoverable from customers on Lines 38 and 39 of
21 Table 12-5 above is due to a lower amount of long-term debt issued than projected,
22 consequently resulting in a higher short-term debt balance than projected.

23 The favourable income tax variance of \$3.716 million is calculated as 27 percent of the
24 aforementioned variances.

25 The combined unfavourable variance of \$1.840 million related to depreciation/CIAC
26 amortization, interest and tax variances on Clean Growth/CPCN/exogenous capital amounts,
27 shown on Lines 21, 22, 36 and 42, respectively, in Table 12-5 above, were derived for 2022 by
28 comparing the actual 2022 cost of service impacts of the NGT Assets and the IGU, Tilbury 1A
29 Expansion, LMIPSU and CTS TIMC projects to the amounts forecast for those same projects.

30 **12.5 SUMMARY**

31 FEI has provided an update on the potential exogenous factor related to flooding damages. FEI
32 has also provided an update on the RGSD Project Development deferral account, as well as
33 information related to the Flow-through deferral account.

⁷² $(3.3433\% - 4.05\%) \times \108.374 million forecast 2022 short-term debt in Schedule 26 of Annual Review for 2022 Delivery Rates Compliance Filing financial schedules.

13. SERVICE QUALITY INDICATORS

13.1 INTRODUCTION AND OVERVIEW

Under the MRP, SQIs are used to monitor the Utility's performance to ensure that any efficiencies and cost reductions do not result in a degradation of the quality of service to customers.

In the MRP Decision and Order G-165-20, the BCUC approved a balanced set of SQIs for FEI, covering safety, responsiveness to customer needs, and reliability. Nine of the SQIs have benchmarks and performance ranges set by a threshold level. Four of the SQIs are for information only and as such do not have benchmarks or performance ranges.

In the subsections below, FEI reports on its 2022 and June 2023 year-to-date performance as measured against the SQI benchmarks and thresholds. In 2022, for the nine SQIs with benchmarks, seven performed at or better than the approved benchmarks. Two of the SQIs with benchmarks – Meter Reading Accuracy and Telephone Service Factor (Non-Emergency) – were lower than the threshold. The below-threshold Meter Reading Accuracy performance was primarily due to the broader impacts of the COVID-19 pandemic,⁷³ including staffing challenges and the need for physical distancing and enhanced hygiene practices by meter readers. The Telephone Service Factor (Non-Emergency) performance was impacted by higher than normal attrition levels in the contact centre and an increased amount of high bill inquiries over the year. Regarding the four SQIs that are informational only, the Average Speed of Answer results in 2022 were higher due to the same challenges impacting the Telephone Service Factor (Non-Emergency), while performance for the other three informational metrics generally remains at a level consistent with prior years. In 2023 to date, performance for the metrics with benchmarks is trending towards meeting the benchmark or the threshold.

Consistent with how SQIs were reviewed during the 2014-2019 PBR Plan term,⁷⁴ FEI has provided 2022 and year-to-date 2023 SQI results in this annual review.

13.2 REVIEW OF THE PERFORMANCE OF SERVICE QUALITY INDICATORS

For each SQI, Table 13-1 provides a comparison of FEI's 2022 and June year-to-date performance for 2023 to the proposed benchmarks and thresholds approved as part of the MRP. Actual 2022 and June year-to-date results for 2023 are also provided for the four informational SQIs.

⁷³ In Letter L-20-20, dated March 31, 2020, the BCUC granted public utilities relief from meter reading, when necessary, for the duration of the State of Emergency in the Province of British Columbia and while social distancing practices remain in place.

⁷⁴ MRP Decision page 99: "the Panel determines that the existing approved process for interpreting metric performance is to remain in effect over the term of the MRPs".

1 **Table 13-1: Approved SQIs, Benchmarks and Actual Performance**

Performance Measure	Description	Benchmark	Threshold	2022 Results	2023 June YTD Results
Safety SQIs					
Emergency Response Time	Percent of calls responded to within one hour	>= 97.7%	96.2%	97.7%	97.6%
Telephone Service Factor (Emergency)	Percent of emergency calls answered within 30 seconds or less	>= 95%	92.8%	97.1%	97.7%
All Injury frequency rate (AIFR)	3 year average of lost time injuries plus medical treatment injuries per 200,000 hours worked	<= 2.08	2.95	1.59	1.72
Public Contacts with Gas Lines	Current year average of number of line damages per 1,000 BC One calls received	<= 8	12	6	4
Responsiveness to the Customer Needs SQIs					
First Contact Resolution	Percent of customers who achieved call resolution in one call	>= 78%	74%	78%	77%
Billing Index	Measure of customer bills produced meeting performance criteria	<= 3.0	5.0	1.0	0.63
Meter Reading Accuracy	Number of scheduled meters that were read	>= 95%	92%	88%	95%
Telephone Service Factor (Non-Emergency)	Percent of non-emergency calls answered within 30 seconds or less	>= 70%	68%	62%	67%
Meter Exchange Appointment	Percent of appointments met for meter exchanges	>= 95%	93.8%	98.5%	98.9%
Customer Satisfaction Index	Informational indicator - measures overall customer satisfaction	-	-	8.6	8.5
Average Speed of Answer	Informational indicator – amount of time it takes to answer a call (seconds)	-	-	106	88
Reliability SQIs					
Transmission Reportable Incidents	Informational indicator – number of reportable incidents to outside agencies	-	-	3	0
Leaks per KM of Distribution System Mains	Informational indicator - measures the number of leaks on the distribution system per KM of distribution system mains	-	-	0.0058	0.0034

2

1 In the following sections, FEI reviews each SQI's year-to-date individual performance in 2022
2 and 2023. Discussion is also provided for the informational SQIs.

3 **13.2.1 Safety Service Quality Indicators**

4 **13.2.1.1 Emergency Response Time**

5 This SQI measures the utility's responsiveness to on average 24,000 annual emergency events
6 that include gas odour calls, carbon monoxide calls, house fires and hit lines. It is calculated as:

7
$$\frac{\text{Number of emergency calls responded to within one hour}}{\text{Total number of emergency calls in the year}}$$

9 There are many variables affecting the response time, including time of day (i.e., during
10 business hours or after business hours), number and type of events, available resources,
11 location (i.e., travel times and traffic congestion) and weather conditions.

12 The 2022 result was 97.7 percent which met the benchmark. The 2022 performance was
13 consistent with the performance in 2020 and 2021. The June 2023 year-to-date performance is
14 97.6 percent, which is better than the threshold.

15 For comparison, the Company's annual results under the 2014-2019 PBR Plan, the 2020, 2021,
16 and 2022 results and the June 2023 year-to-date emergency response time results are provided
17 below.

18 **Table 13-2: Historical Emergency Response Time**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Results	96.7%	97.3%	97.4%	97.8%	97.8%	97.9%	97.7%	97.7%	97.7%	97.6%
Benchmark							97.7%			
Threshold							96.2%			

19 **13.2.1.2 Telephone Service Factor (Emergency)**

20 This indicator measures the percentage of emergency calls answered within 30 seconds and is
21 calculated as:

22
$$\frac{\text{Number of emergency calls answered within 30 seconds}}{\text{Number of emergency calls received}}$$

24 The telephone service factor (TSF) is a measure of how well the Company can balance costs
25 and service levels, with the overall objective to maintain a consistent TSF level. This ensures
26 the Company is staying within appropriate cost levels and maintaining adequate service for its
27 customers. The principal factors influencing the TSF results include the volume of inbound calls

1 received and the resources available to answer those calls. Staffing is matched to the calls
2 forecast based on historical data in order to reach the service level benchmark desired.

3 The 2022 result was 97.1 percent which was better than the benchmark of 95 percent. The June
4 2023 year-to-date performance is 97.7 percent which is also better than the benchmark.

5 For comparison, the Company's annual results under the 2014 to 2019 PBR Plan, the 2020,
6 2021, and 2022 results and the June 2023 year-to-date for TSF (Emergency) are provided
7 below:

8 **Table 13-3: Historical TSF (Emergency) Results**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Results	95.8%	97.6%	98.5%	97.6%	97.9%	97.2%	96.9%	96.9%	97.1%	97.7%
Benchmark	95.0%									
Threshold	92.8%									

9 **13.2.1.3 All Injury Frequency Rate**

10 The All Injury Frequency Rate (AIFR) is an employee safety performance indicator based on
11 injuries per 200,000 hours worked, with injuries defined as lost time injuries (i.e., one or more
12 days missed from work) and medical treatments (i.e., medical treatment was given or
13 prescribed). The annual performance for this metric is calculated as:

$$\frac{\text{Number of Employee Injuries} \times 200,000 \text{ hours}}{\text{Total Exposure Hours Worked}}$$

14
15
16 For the purpose of this SQI, the measurement of performance is based on the three-year rolling
17 average of the annual results.

18 The 2022 (three-year rolling average) result was 1.59 which was better than the benchmark of
19 2.08. The 2022 annual AIFR was 1.36 which reflected 8 Medical Treatments and 16 Lost Time
20 Injuries.

21 The June 2023 year-to-date performance (three-year rolling average) result is 1.72 which is
22 better than the benchmark. The June 2023 year-to-date performance (annual) is 1.43 and
23 reflects 3 Medical Treatments and 10 Lost Time Injuries.

24 Strengthening the safety culture continues to be a key driver for FEI, building on the
25 commitment to learn from safety events, identify safety hazards, assess risk and continually
26 improve the Company's safety management system through the implementation and
27 sustainment of robust safety defences and controls.

28 The AIFR result for 2022 was better than the benchmark and was slightly better than 2021 and
29 2020. FEI continues to seek opportunities to improve the AIFR through its ongoing commitment

1 to proactive hazard mitigation, particularly in regard to manual labour tasks and slip/trip/fall
2 prevention. FEI has adopted multiple mitigation measures, including enhanced digital safe work
3 planning, task specific training and education across areas of the business that have been
4 identified as having a higher risk of injury, additional ergonomic assessments, injury prevention
5 strategies, and a range of technology solutions.

6 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
7 2022 results and the June 2023 year-to-date AIFR results are provided below.

8 **Table 13-4: Historical All Injury Frequency Rate Results**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Annual Results	1.73	2.52	2.13	1.36	1.74	1.82	1.43	1.99	1.36	1.43
Three year rolling average	2.22	2.42	2.13	2.00	1.74	1.64	1.66	1.75	1.59	1.72
Benchmark	2.08									
Threshold	2.95									

9 **13.2.1.4 Public Contact with Gas Lines**

10 This metric measures the overall effectiveness of the Company's efforts to minimize damage to
11 the gas system through public awareness, which is designed to reduce interruptions and the
12 associated public safety and service issues to customers.

13 This indicator is calculated as:

14
$$\text{Number of Line Damages per 1,000 BC One Calls received}$$

15 For the purpose of this service quality indicator, the measurement of performance is based on
16 the annual results. The new benchmark and threshold approved in the MRP are 8 and 12,
17 respectively.

18 In its Decision on FEI's Annual Review of 2015 Delivery Rates, the BCUC directed FEI to
19 provide the number of line damages and the number of calls to BC One Call in future annual
20 reviews. Therefore, the number of line damages and number of calls to BC One Call are
21 provided in Table 13-5 below.

22 The 2022 result was 6, which is better than the benchmark. The June 2023 year-to-date
23 performance is 4, which is also better than the benchmark.

24 Principal factors influencing results for this metric include economic growth (i.e., construction
25 activity), damage prevention awareness programs, and heightened public awareness created by
26 the BC One Call program. The current year result reflects an ongoing positive trend for this
27 metric. Increased awareness through targeted workshops with municipalities and excavating

1 contractors, together with the ongoing execution of the Damage Investigation Program have
2 contributed to the improved performance.

3 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
4 2022 results, and June 2023 year-to-date results are provided below. The annual result has
5 been trending downward (i.e., performance has been trending positively).

6 The Company continues to take steps to address line damage. FEI continues to have Damage
7 Prevention Investigators focus on repeat damagers and is working with Technical Safety BC
8 and WorkSafeBC to reduce line hits. While 2023 year-to-date volume (83,923) is higher than
9 2022 (82,699), it is lower than 2021 (86,673), and fairly consistent with 2019 (79,654) and 2020
10 (72,034) levels. The hits per 1,000 ticket metric continues to trend in the right direction,
11 indicating the effectiveness of the additional steps the Company is taking to address line
12 damages.

13 **Table 13-5: Historical Public Contact with Gas Lines Results**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Annual Results	9	8	8	9	8	7	7	6	6	4
Benchmark	16						8			
Threshold	16						12			
BC One Call Ticket Volume	107,509	122,627	129,645	146,868	157,708	144,413	141,262	163,584	157,174	83,923
Line Damages	954	1,035	1,086	1,247	1,201	1,069	973	1,034	896	403

14 **13.2.2 Responsiveness to Customer Needs Service Quality Indicators**

15 **13.2.2.1 First Contact Resolution**

16 First Contact Resolution (FCR) measures the percentage of customers who receive resolution
17 to their issue in one contact with FEI. The Company determines the FCR results using a
18 customer survey, tracking the number of customers who responded that their issue was
19 resolved in the first contact with the Company. The FCR rate is impacted by factors such as
20 the quality and effectiveness of the Company's coaching and training programs and the
21 composition of the different call drivers.

22 The 2022 result was 78 percent which met the benchmark. The minor reduction in FCR for 2022
23 as compared to previous years, as shown in Table 13-6 below, is largely attributable to the
24 increased volume of high bill inquiries in the early and latter months of 2022 as well as rate and
25 carbon tax changes. For further details on the factors causing an increased volume of high bills,

1 please refer to Section 13.2.2.4 – Telephone Service Factor (Non-Emergency). Depending on
2 the nature of the high bill, there may be a need for customers to follow up on their billing,
3 resulting in more than one contact to resolve their concerns. As well, high bill calls can require
4 longer term payment arrangements which at times may require changes, leading to customers
5 connecting with FEI multiple times for the same reason. Further, with respect to the impact on
6 FCR from rate changes, while customers may appreciate the conversation and understand the
7 reasons for such changes, some customers do not consider the issue resolved without the rate
8 reverting back. The June 2023 year-to-date performance is 77 percent, which is slightly below
9 benchmark, but above threshold.

10 For comparison, the Company’s results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
11 2022 results and the June 2023 year-to-date results are provided below.

12 **Table 13-6: Historical First Contact Resolution Levels**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Annual Results	80%	81%	81%	80%	83%	81%	81%	79%	78%	77%
Benchmark	78%									
Threshold	74%									

13 **13.2.2.2 Billing Index**

14 The Billing Index indicator tracks the effectiveness of the Company’s billing system by
15 measuring the percentage of customer bills produced meeting performance criteria. The Billing
16 Index is a composite index with three components:

- 17 d. Billing completion (percent of accounts billed within two days of the billing due date);
- 18 e. Billing timeliness (percent of invoices delivered to Canada Post within two days of file
19 creation); and
- 20 f. Billing accuracy (percent of bills without a production issue based on input data).

21 The objective is to achieve a score of five or less.

22 The Billing Index is impacted by factors such as the performance of the Company’s billing
23 system, weather variability, which can cause a high volume of billing checks and estimation
24 issues, and mail delivery by Canada Post.

25 The 2022 result was 1.02 which was better than the benchmark of 3.0. No significant billing
26 issues occurred in 2022. The June 2023 year-to-date result is 0.63 which is also better than the
27 benchmark.

28 The 2022 Billing Index sub-measures calculation is as follows.

1 **Table 13-7: Calculation of 2022 Billing Index**

Billing sub-measure	Percent Achieved (PA)	Formula	Result
Billing Accuracy (Percent of bills without a Production Issue, based on input data); Target - 99.9%	100.00%	If (PA≥99.9%,5000*(1 - PA),100*(1.05-PA))	=5000*(1-100%) 0.00
Billing Timeliness (Percent of invoices delivered to Canada Post within 2 days of file creation); Target - 95%	100.00%	(100%-PA)*100	=(100%-100%)*100 0.00
Billing Completion (Percent of accounts billed within 2 days of the billing due date); Target - 95%	96.94%	(100%-PA)*100	= (100%-96.94%)*100 3.06
Billing Service Quality Indicator; Target < 3		(Accuracy PA+Timeliness PA+Completion PA)/3	=(0+0+3.06) / 3 1.02

2
3 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
4 2022 results and the June 2023 year-to-date results are provided below.

5 **Table 13-8: Historical Billing Index Results**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Annual Results	0.89	1.06	0.57	0.75	2.63	0.44	0.62	0.94	1.02	0.63
Benchmark	5.0						3.0			
Threshold	5.0									

6 **13.2.2.3 Meter Reading Accuracy**

7 This SQI compares the number of meters that are read to those scheduled to be read.
8 Providing accurate and timely meter reads for customers is a key driver for the Company and its
9 customers. The results are calculated as:

$$\frac{\text{Number of scheduled meters read}}{\text{Number of scheduled meters for reading}}$$

12 Factors typically influencing this SQI's performance include the resources available, system
13 issues impacting the Company's billing or reading collections systems, weather conditions
14 including road and highway conditions, and traffic related issues.

1 The 2022 result was 87.8 percent, which is below the benchmark and threshold and the third
2 consecutive year that FEI has had below threshold performance in this metric. Overall SQI
3 performance for 2020 was evaluated in FEI's Annual Review for 2022 Delivery Rates and the
4 BCUC determined that service quality requirements were met and that the lower than threshold
5 Meter Reading Accuracy results were primarily attributable to safety protocols introduced in
6 response to the COVID-19 pandemic. Consistent with the experience in 2020, the results for
7 2022 reflect continued challenges as a result of the broader impacts of the COVID-19 pandemic
8 which included staffing challenges and the need for physical distancing and enhanced hygiene
9 practices by meter readers.⁷⁵ Olameter continued to experience staffing challenges throughout
10 2022, including periods where subsequent variants of the virus affected their employees. In
11 addition, meter reading efforts in 2022 were significantly impacted by extreme weather events in
12 the early part of the year and then again in December. All of these weather events contributed
13 to a larger percentage of estimated reads due to the inability to safely access meters. For these
14 reasons, FEI's meter accuracy results for 2022 being below threshold are attributable to the
15 broader impacts of the COVID-19 pandemic and extreme weather conditions in 2022, rather
16 than any action or inaction of FEI.

17 FEI has continued to mitigate the potential service quality impact on customers as a result of the
18 higher number of estimated reads. Measures used in 2022 and continuing in 2023 are
19 consistent with those used in 2020 and evaluated by the BCUC in the 2022 Annual Review.
20 These measures include: working closely with FEI's meter reading service provider, Olameter,
21 to achieve as many actual meter reads as safely possible; using the best available historical
22 billing information to estimate reads for billing purposes; working with customers to acquire
23 additional information to support minimizing the variance between estimated and actual reads;
24 and continuing to mitigate bill payment challenges that may result from estimations through
25 flexible and supportive payment arrangements.⁷⁶

26 The June 2023 year-to-date performance is 95.0 percent which meets the benchmark.
27 Olameter's ability to hire and retain staff along with challenges attributable to the impacts of the
28 COVID-19 pandemic have improved. FEI has continued to apply the mitigation measures
29 described above throughout 2022 and year-to-date 2023. Significant improvement in the
30 monthly performance of this metric has been experienced starting in April of 2022 and leading

⁷⁵ The BCUC anticipated this impact in Letter L-20-20, which granted public utilities relief from meter reading, when necessary, for the duration of the State of Emergency in the Province of BC and while social distancing practices remain in place. In BCUC Letter L-20-20, dated March 31, 2020, the BCUC stated:

"The BCUC recognizes that this Pandemic greatly impacts utilities and utility customers across British Columbia as many businesses and individuals adjust to working from home, social distancing, and self-isolation. Given these difficult circumstances, the BCUC understands that utilities may not be able to conduct in-person meter reading for all customers at this time due to safety and operational concerns. As such, any public utilities regulated by the British Columbia Utilities Commission (BCUC) that are unable to estimate billings within their endorsed tariff Terms and Conditions are granted relief from meter reading, when necessary, for the duration of the State of Emergency in the Province of British Columbia and while social distancing practices remain in place.

In place of meter readings, when necessary, energy consumption may be estimated from best available sources and evidence for billing purposes. When the next actual meter reading is completed, customers' bills must then be adjusted for the difference between estimated and actual use over the interval between meter readings."

⁷⁶ For example, where capacity is available, FEI is proactively contacting customers with multiple estimates in a row to determine if a customer provided read is possible to support the estimation.

1 into 2023, with the exception of December 2022 where extreme weather events contributed to a
2 larger percentage of estimated reads due to the inability to safely access meters. FEI continues
3 to work closely with Olameter on their improved performance and as such, barring the impact of
4 any extreme weather or other unforeseen events, FEI expects Olameter to continue to meet the
5 threshold and achieve the benchmark.

6 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
7 2022 results and the June 2023 year-to-date results are provided below.

8 **Table 13-9: Historical Meter Reading Accuracy Results**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Annual Results	97.0%	97.5%	96.9%	96.2%	95.4%	95.2%	89.2%	88.0%	87.8%	95.0%
Benchmark	95.0%									
Threshold	92.0%									

9 **13.2.2.4 Telephone Service Factor (Non-Emergency)**

10 The Telephone Service Factor (Non-Emergency) measures the percentage of non-emergency
11 calls that are answered in 30 seconds. It is calculated as:

$$\frac{\text{Number of non-emergency calls answered within 30 seconds}}{\text{Number of non-emergency calls received}}$$

14 Similar to the TSF (Emergency), this is a measure of how well the Company can balance costs
15 and service levels with the overall objective to maintain a consistent TSF level. This ensures the
16 Company is staying within appropriate cost levels and maintaining adequate service for its
17 customers. The principal factors influencing the TSF results include volume and type of inbound
18 calls received and the resources available to answer those calls. Staffing is matched to the
19 expected call volume based on historical data in order to reach the service level benchmark
20 desired. Other factors that can influence the non-emergency TSF are billing system related
21 issues and weather patterns that may generate high numbers of billing related queries and the
22 complexity of the calls.

23 The 2022 result was 62 percent which was below the benchmark and threshold. The June 2023
24 year-to-date performance is 67 percent which is lower than the threshold.

25 FEI experienced several challenging circumstances in 2022 that contributed to the year-end
26 performance being below the threshold. These challenges included higher than expected
27 attrition in the contact centre compounded by an increased amount of high bill inquiries over the
28 year. Each of these is described further below.

29 Customer Service is experiencing higher than expected levels of attrition, having lost 76
30 Customer Service employees in 2022, compared to 65 lost in 2021. Most of these employee

1 exits were concentrated in the second and third quarters of 2022, resulting in fewer and less
2 experienced employees prepared to support call volumes in the third and fourth quarters of
3 2022. To mitigate the impact of this attrition, FEI accelerated the timing of planned new hire
4 classes as well as the size of new hire classes in both 2022 and 2023. While FEI has had some
5 success, FEI continued to face challenges with recruiting and retaining newly hired contact
6 centre employees in 2022. In addition, it takes on average approximately 12 months for new
7 employees to be proficient and fully trained to support all customer inquiries and calls, and as
8 such, average call handle times remain higher than normal while a greater portion of employees
9 gain this experience.

10 FEI also saw an 88 percent increase in high bill call volume in 2022, as compared to 2021. High
11 bill inquiries are expected in the first quarter of the year and planned for with staffing levels and
12 schedules adjusted, new hire classes timed accordingly, and refresher training offered to those
13 employees that may need it. However, several circumstances converged that resulted in a
14 volume of high bill inquiries that was significantly greater than anticipated and lasted throughout
15 the year. The contributing factors to the higher volume of this call type included heavy snowfall
16 in several parts of the Province in late 2021 and also in December 2022, resulting in a larger
17 volume of bills based on estimated reads in the early and latter parts of 2022, coupled with rate
18 and carbon tax increases. This particular call type is often longer in duration and may also result
19 in follow-up work and investigation. As noted above, there were fewer and less experienced
20 employees prepared to support these types of calls. Thus, the contact centre experienced the
21 compounding impact of fewer employees and a significantly higher volume of this call type,
22 resulting in overall longer average wait times and a lower percentage of calls answered within
23 30 seconds or less.

24 Although the start of 2023 has continued to be challenging, strong performance in first contact
25 resolution, in addition to the promotion of self-service and the call back feature, continues to
26 mitigate the impacts of the lower TSF on customer experience and service quality. Further,
27 beginning in March, FEI achieved a non-emergency TSF above benchmark and positive
28 progress continues (83 percent for the months of March and April, 85 percent for the month of
29 May, and 84 percent for the month of June). FEI expects to recover to threshold levels on a
30 year-to-date basis within the fourth quarter. Finally, the customer service index has remained
31 high throughout 2022 and 2023 to date, indicating that the mitigation measures and focus on
32 first contact resolution continue to result in an overall high quality of service being experienced
33 by customers.

34 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
35 2022 results and the June 2023 year-to-date results are provided below.

1 **Table 13-10: Historical TSF (Non-Emergency) Results**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Annual Results	75%	71%	71%	71%	71%	71%	70%	70%	62%	67%
Benchmark ⁷⁷	75%	70%								
Threshold	68%									

2 **13.2.2.5 Meter Exchange Appointments**

3 The Meter Exchange Appointments SQI measures FEI's performance in meeting appointments
4 for meter exchanges (excluding industrial meters). The calculation for percentage meter
5 exchange appointments met is calculated as:

$$\frac{\text{Number of meter exchange appointments met}}{\text{Number of meter exchange appointments made}}$$

8 Factors influencing results include processes, number of emergencies, weather, and traffic
9 conditions. The processes require the contact centre and operations departments to work
10 closely together in order to better meet the needs of customers and match resources to
11 appointments while maintaining emergency response capabilities.

12 The 2022 result was 98.5 percent which was better than the benchmark of 95 percent. The June
13 2023 year-to-date performance is 98.9 percent, which is also better than the benchmark.

14 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
15 2022 results and the June 2023 year-to-date results are provided below.

16 **Table 13-11: Historical Meter Exchange Appointment Results**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Annual Results	95.5%	96.6%	96.9%	97.0%	96.3%	96.0%	98.1%	98.3%	98.5%	98.9%
Benchmark	95.0%									
Threshold	93.8%									

17 **13.2.2.6 Customer Satisfaction Index**

18 The Customer Satisfaction Index (CSI) is an informational indicator that measures overall
19 customer satisfaction with the Company. The index reflects customer feedback about important

⁷⁷ The 2014 result was achieved with the Company targeting 75 percent as the benchmark. The BCUC approved the revised target of 70 percent in mid-September 2014. In 2015 and subsequent years, actual results were reflective of the revised target of 70 percent.

1 service touch points including overall satisfaction, the contact centre, perceived accuracy of
2 meter reading, energy conservation information, and field services. The index includes feedback
3 from both residential and mass market commercial customers. The survey is conducted
4 quarterly, and results are presented as a score out of 10.

5 The annual CSI score for 2022 was 8.6, lower than the 8.7 obtained in 2021. There were no
6 statistically significant shifts from 2021 to 2022 in the five measures that make up the overall
7 customer satisfaction score. The scores for overall satisfaction and satisfaction with the
8 accuracy of meter reading decreased from 8.7 in 2021 to 8.6 in 2022 and 8.4 in 2021 to 8.3 in
9 2022, respectively. In addition, the scores for the satisfaction with energy conservation and
10 satisfaction with contact centre metrics decreased from 7.7 in 2021 to 7.5 in 2022 and 8.7 in
11 2021 to 8.6 in 2022, respectively. The score for the satisfaction with field services metric
12 remained static at 9.3.

13 The score for 2023 year-to-date is 8.5, slightly lower than the annual score recorded for 2022 at
14 8.6. Of the five measures that make up the overall customer satisfaction score, the results for
15 June 2023 year-to-date were lower in four areas and static in one when compared to the annual
16 2022 scores. The scores for overall satisfaction decreased from 8.6 to 8.4, satisfaction with the
17 accuracy of meter reading went from 8.3 to 8.2, satisfaction with the contact centre decreased
18 from 8.6 to 8.4, and field services decreased from 9.3 to 9.2. The score for satisfaction with
19 energy conservation information remained static at 7.5.

20 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
21 2021 results and the June 2023 year-to-date results are provided below.

22 **Table 13-12: Historical Customer Satisfaction Results**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD
Annual Results	8.5	8.6	8.8	8.4	8.7	8.7	8.7	8.7	8.6	8.5
Benchmark	n/a									
Threshold	n/a									

23 **13.2.2.7 Average Speed of Answer**

24 The Average Speed of Answer (ASA) is an informational indicator that measures the amount of
25 time it takes for a customer service representative to answer a customer's call (seconds).

26 The 2022 result was 106 seconds. The June 2023 year-to-date performance is 88 seconds. As
27 described above, challenges in the contact centre resulted in monthly non-emergency TSF
28 performance levels being below the threshold. Comparatively, the ASA also experienced
29 challenges, and so far in 2023, calls are being answered in under two minutes on average.
30 Aligned with the recovery to threshold levels of the TSF, the monthly ASA also returned to

1 typical levels of less than one minute in March and FEI expects this metric to continue to
2 improve on a year-to-date basis throughout the remainder of the year.

3 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
4 2022 results and the June 2023 year-to-date results are provided below.

5 **Table 13-13: Average Speed of Answer**

Description	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD

Benchmark	n/a									
Threshold	n/a									

6 **13.2.3 Reliability Service Quality Indicators**

7 **13.2.3.1 Transmission Reportable Incidents**

8 The Transmission Reportable Incidents metric is an informational indicator that measures the
9 number of reportable incidents to outside agencies for transmission assets as defined by the
10 British Columbia Energy Regulator (BCER). The metric is intended to be an indicator of the
11 integrity of the transmission system.

12 There were 3 recorded incidents in 2022. The first incident took place during an isolation on the
13 6-inch transmission pressure gas line near Salmon Arm, BC (SAL LOP 168). An FEI contractor
14 drilled the cutter head through the side of the pipe and fitting, causing gas release which
15 resulted in the need to isolate an approximate 11 km section of the pipeline for the repair
16 activities. No customer outages resulted from the incident. The second incident was a
17 mechanical line strike by an FEI contractor on the 6-inch transmission pressure gas line near
18 Kamloops, BC (KA1 LTL 168), causing gas release which resulted in the need to isolate an
19 approximate 2.6 km section of the pipeline for repair activities. One industrial customer outage
20 resulted from the incident as the impacted line was shut-in for the repair activities. The third
21 incident was a leak discovered on the 6-inch transmission pressure gas line near Trail, BC (TRA
22 LTL 168), which resulted in the need to install a bypass to avoid a customer outage. A 6-metre
23 segment of gas line was removed and replaced.

24 There have been no recorded incidents so far in 2023 (June 2023 year-to-date).

25 For comparison, the Company's results under the 2014 to 2019 PBR Plan, the 2020, 2021 and
26 2022 results and the June 2023 year-to-date results are provided below.

1 **Table 13-14: Historical Transmission Reportable Incidents**

Benchmark	n/a									
Threshold	n/a									

2 **13.2.3.2 Leaks per KM of Distribution System Mains**

3 The Leaks per KM of Distribution System Mains metric is an informational indicator that
 4 measures the number of leaks on the distribution system per KM of distribution system mains.
 5 The metric is intended to be an indicator of the integrity of the distribution system. Each year,
 6 approximately one fifth of the distribution system is surveyed for leaks, with the number of leaks
 7 varying from year to year, depending on the condition of the pipe surveyed.

8 Variability in the number of leaks detected is influenced by the timing of the leak survey program
 9 as well as the condition of the distribution system, as some sections of the pipeline system are
 10 more prone to leaks depending on soil conditions, age of the pipelines, pipeline material and the
 11 location of the pipeline. As the distribution system ages, the expected number of leaks may
 12 increase depending on the Company’s pipeline renewal/replacement activities. Using newer,
 13 more sensitive leak detection technology may also result in more leaks being detected. This
 14 new technology has been in use since 2022.

15 In its Decision on FEI’s Annual Review of 2015 Delivery Rates, the BCUC directed FEI to
 16 provide a five-year rolling average as follows:

17 The Panel agrees with BCSEA that a five-year rolling average of Leaks per KM
 18 of Distribution System Mains would be helpful information and directs FEI to
 19 provide this information in future annual reviews.

20 Table 13-15 below provides the historical data for the calculation of the June 2023 year-to-date
 21 five-year rolling average result of 0.0061 calculated using data from July 2018 to June 2023.

1

Table 13-15: June 2023 Year-to-Date Five-Year Rolling Average

Period	Metric
July – December 2018	0.0035
January – December 2019	0.0060
January – December 2020	0.0065
January – December 2021	0.0055
January – December 2022	0.0058
January – June 2023	0.0034
Five Year Rolling Average	0.0061

2

3 The Company’s 2014 to 2022 annual results are provided below. The five-year average for each
4 year shown is calculated by taking the average of the results of the stated year and the four
5 years prior (e.g., the 2022 five-year average is calculated using 2018 to 2022 annual data). The
6 June 2023 year-to-date result is 0.0034 based on 82 leaks detected year-to-date, which is
7 higher than the 2022 (75) and 2021 (70) results for the similar time period. The number of leaks
8 on DP mains will vary from year to year.

9

Table 13-16: Historical Leaks per KM of Distribution System Mains

Leaks per KM of Distribution System Mains	2014	2015	2016	2017	2018	2019	2020	2021	2022	June 2023 YTD

5 year average	0.0077	0.0071	0.0063	0.0055	0.0052	0.0051	0.0056	0.0058	0.0060	0.0061

10 **13.3 SUMMARY**

11 In summary, FEI’s 2022 results and June 2023 year-to-date SQI results indicate that the
12 Company’s overall performance is representative of a high level of service quality. In 2022, for
13 those SQIs with benchmarks, seven performed at or better than the approved benchmarks. The
14 Meter Reading Accuracy metric performance was lower than the threshold due to the broader
15 impacts of the COVID-19 pandemic, including staffing challenges, and the Telephone Service
16 Factor (Non-Emergency) was impacted by higher than normal attrition levels in the contact
17 centre and an increased amount of high bill inquiries over the year. While the Average Speed of
18 Answer results were higher for the same reasons as the Telephone Service Factor (Non-
19 Emergency), performance in 2022 for the other three informational metrics generally remains at
20 a level consistent with prior years.

Appendix A2	Historical Forecast and Consolidated Tables – Fully Functioning Spreadsheet
--------------------	---

1 **1. INTRODUCTION**

2 This appendix presents two data sets as follows:

3 1. Historical and Forecast Data

4 a. 2013 – 2022 Actual data

5 b. 2023 Seed data

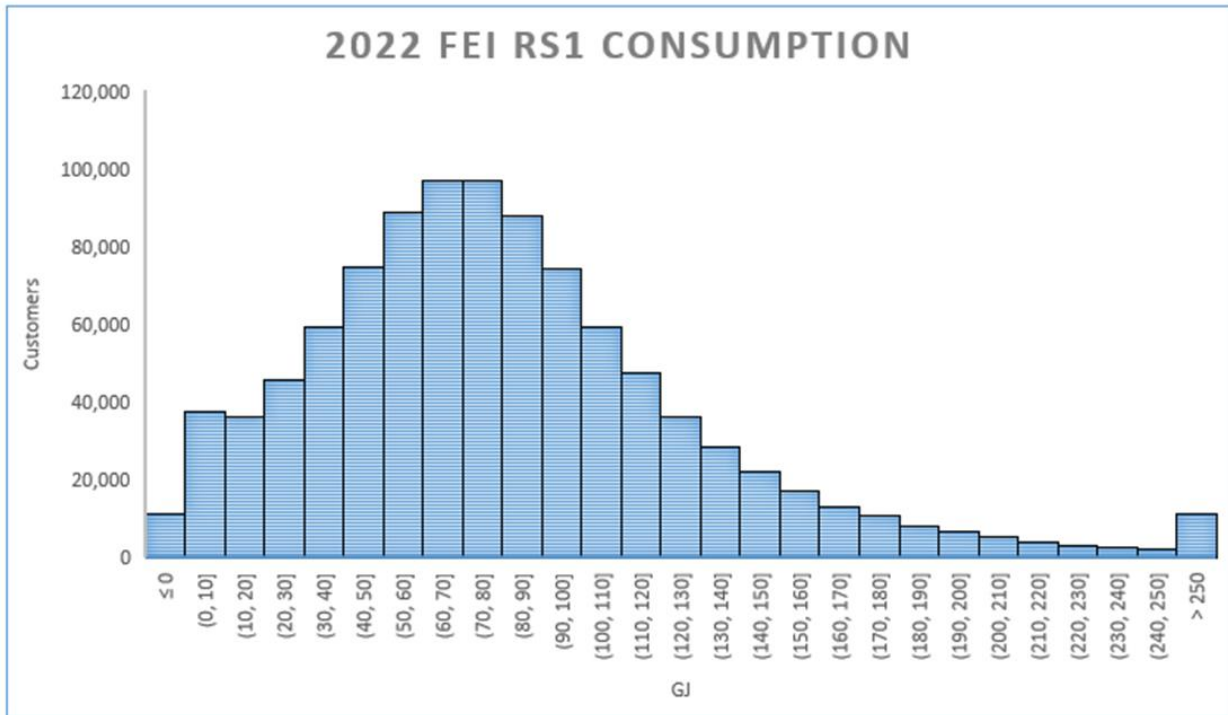

6 c. 2024 Forecast data

7 2. Percent Error

8 a. 2013 - 2022 Forecast, Actual and percent error

1

Figure A2-1: FEI Residential Customers Normalized UPC in 2022

2

3. PERCENT ERROR DATA TABLES

In the data tables presented below, FEI provides 10 years of historical actual demand, forecast demand and percent error for each customer class and service area and on a consolidated (or amalgamated) basis, for total demand, total net customers, net customer additions and use per customer. The data tables are also provided as a fully-functional Excel file in Appendix A2-1.

Percent error is the difference between the actual demand and the forecast demand, divided by the actual demand in a given year, or stated as a formula:

$$PE_t = \left(\frac{Y_t - F_t}{Y_t} \right) \times 100$$

Where F_t is the forecast at time t and Y_t is the actual value at time t.

The tables provided below present the historical data in amalgamated form, unless specifically identified for a particular region. In order to provide historical amalgamated data, FEI mapped the Vancouver Island and Whistler customers to FEI rate schedules for periods prior to 2015. This mapping was completed using the mapping approved for the purposes of amalgamation presented in FEI's Common Rates Methodology Application, Section 4.2, as approved by BCUC Order G-131-14.

3 3.9 VANCOUVER ISLAND AND WHISTLER AMALGAMATED DATA

4 In order to provide historical amalgamated data, FEI mapped the Vancouver Island and Whistler
5 customers to FEI rate schedules for periods prior to 2015. This mapping was completed using
6 the mapping approved for the purposes of amalgamation presented in FEI's Common Rates
7 Methodology Application, Section 4.2 as approved by Order G-131-14. Tables in Sections 3.10
8 through 3.17 use this mapped data for historical calculations.

1. INTRODUCTION

In this appendix, FEI provides a detailed description of its demand forecast method.

The following table shows the high level method used for each component of FEI’s demand forecast.

Table A3-1: Summary of FEI Forecast Methods

Rate Group	Customer Additions	Customers	Use Rate	Demand
Residential	CBOC forecast by dwelling type	Prior year customers + customer adds	Exponential Smoothing method, using normalized historical UPC	Product of Customers and Use Rates
Commercial	3 Yr. Avg. historical additions	Prior year customers + customer adds	Exponential Smoothing method, using normalized historical UPC	Product of Customers and Use Rates
Industrial				Annual survey of industrial customers

FEI’s demand forecast methods are consistent with the recommendations in the FEI Forecasting Method Study filed as Appendix B2 in FortisBC’s 2020-2024 MRP Application. The Forecasting Method Study represented the culmination of a number of years of research and testing of alternative forecasting methods in response to the forecasting directives in Order G-86-15 and accompanying decision related to the FEI Annual Review for 2015 Rates Application. As a result of this study, FEI adopted the Exponential Smoothing method (ETS) for the purpose of forecasting residential and commercial use rates, as ETS proved to be the most accurate method for this purpose.

In the following sections, FEI provides background information, including a description of FEI’s regions and rate classes, the time periods used in the forecast, and the weather normalization process, and then describes each of FEI’s forecast methods used to derive the 2023 demand forecast, in the following order:

- Residential Customer Additions;
- Commercial Customer Additions;
- Residential and Commercial Use Rates;
- Residential and Commercial Demand Forecast; and
- Industrial Demand Forecast.

1 **2. BACKGROUND INFORMATION**

2 **2.1 FEI REGIONS**

3 FEI is divided into four regions as shown in Figure A3-1.

4 **Figure A3-1: FEI Regions**

5
6 The Mainland region is further divided into the following sub-regions:

- 7 • Lower Mainland
- 8 • Inland
- 9 • Columbia
- 10 • Revelstoke

11
12 Forecasting is performed at the sub-regional level for each rate schedule in the Mainland region
13 and summed up to derive the Mainland region forecast, which is then added to the forecast for
14 the Vancouver Island, Whistler and Fort Nelson regions to derive the total forecast for each rate
15 schedule within FEI.

16 **2.2 ACTUAL, SEED AND FORECAST YEARS**

17 FEI's demand forecasts contain data from three time frames:

Industrial	
Rate Schedule 4 – Seasonal	This rate schedule applies to the sale of gas to one customer who, pursuant to this Rate Schedule, consumes gas during the off-peak period.
Rate Schedule 5 - General Firm	This rate schedule applies to the sale of firm gas through one meter station to a customer. Firm gas service under this Rate Schedule means the gas FEI is obligated to sell to a customer on a firm basis subject to interruption or curtailment.
Rate Schedule 7 - General Interruptible Sales	This rate schedule applies to the provision of a bundled interruptible transportation service and the sale of firm gas through one meter station to a customer.
Rate Schedule 22/22A/22B - Large Volume Transportation	This rate schedule applies to the provision of firm and/or interruptible transportation service (subject to a minimum of 12,000 gigajoules per month) through the FEI system and through one meter station to one shipper except as previously agreed upon.
Rate Schedule 25 - General Firm Transportation	This rate schedule applies to the provision of firm transportation service through the FEI system and through one meter station to one shipper.
Rate Schedule 27 - General Interruptible Transportation	This rate schedule applies to the provision of interruptible transportation service through the FEI system and through one meter station to one shipper.

1 **2.4 WEATHER NORMALIZATION OF RESIDENTIAL AND COMMERCIAL USE RATES**

2 Residential and commercial rate schedules (Rate Schedules (RS) 1, 2, 3 and 23) are weather
 3 sensitive. A weather normalization process is applied to all actual use rates for these rate
 4 schedules as described in this section. Separate normalization factors are developed for each
 5 region, rate schedule and month.

6 Actual UPC is weather normalized on a monthly basis for each region and rate class by dividing
 7 the actual UPC by a normalization factor. The normalization factor is derived from a non-linear
 8 regression model that estimates the impact of the monthly weather variation on the load. As the
 9 relationship between weather and the usage is not linear, FEI considers three non-linear models
 10 that are often used when modeling weather impact. One is based on the Gompertz distribution
 11 (the “Gompertz” model). The other two methods are variants based on the logit formulation with
 12 one (Logit-4) allowing for an additional parameter for optimal fitting. The models are:

- 13 • Gompertz

14
$$\text{Estimated Monthly UPC} = A \times e^{(-e^{-B \times (\text{Avg. Monthly Temp.} - C)})}$$

- 15 • Logit-3

16
$$\text{Estimated Monthly UPC} = \frac{A}{1 + B \times e^{(-C \times \text{Temp})}}$$

- Logit-4

$$\text{Estimated Monthly UPC} = \frac{(D + (A - D))}{1 + B \times e^{(-C \times \text{Temp})}}$$

The A/B/C/D parameters are estimated through a least squares method to minimize the sum of squared errors (SSE). The optimization process to minimize the SSE is done using the Solver tool in Microsoft Excel.

The heat sensitivity estimated from the model assumes that the sensitivity varies not only depending on the weather but also on the rate class. For example, the residential rate schedule shows higher sensitivity to weather compared to the commercial rate schedules, and FEI's normalization factors account for the difference.

3. RESIDENTIAL CUSTOMER ADDITIONS

The residential net customer additions forecast was developed based on housing starts data from the Conference Board of Canada (CBOC).¹ The housing starts data was as follows:

Table A3-3: BC Housing Starts Data

BRITISH COLUMBIA	2021	2022	2023	2024
Housing Starts, Singles, British Columbia (Thousands ('000s))	11,025	9,109	7,733	8,483
Forecast Percent Change		-17.4%	-15.1%	9.7%
Housing Starts, Multiples, British Columbia (Thousands ('000s))	36,582	34,752	30,534	34,972
Forecast Percent Change		-5.0%	-12.1%	14.5%
Total	47,607	43,861	38,267	43,455

From the above housing starts forecast, the 2024F SFD growth rate is calculated as follows:

$$2024F \text{ SFD Growth Rate} = \left(\frac{8,483}{7,733} \right) - 1 = 9.7\%$$

The remainder of the growth rates are calculated the same way and the results are shown in the following table:

¹ The Growth to Slow as Province Climbs the Population Pyramid: British Columbia's Outlook to 2045. Ottawa: The Conference Board of Canada, 2023. Data released on December 22, 2012.

1 **Table A3-4: Growth Rates**

Housing Type	2023S	2024F
SFD Forecast Percentage Change	-15.10%	9.70%
MFD Forecast Percentage Change	-12.14%	14.53%

2
3 The following table incorporates the FEI proportions of the actual account additions by single
4 family dwelling (SFD) and multi-family (MFD) based on historical percentages from internal data
5 in columns A and B. The 2022 actual total additions are shown in column C, followed by the
6 SFD and MFD proportions in columns D and E. Finally, the CBOC growth rates for 2023 and
7 2024 are applied to the SFD and MFD proportions for 2023 in columns F and G and for 2024 in
8 columns I and J.

9 **Table A3-5: FEI Proportions of Actual Account Additions by SFD and MFD**

Region	2020A	2021A	2022A	Internal Split		Actual Adds 2022			2023S			2024F		
				SFD	MFD	Total	SFD	MFD	SFD	MFD	Total	SFD	MFD	Total
Mainland				A	B	C	D	E	F	G	H	I	J	K
Lower Mainland	567,372	569,546	573,352	36.6%	63.4%	3,806	1,394	2,412	1,184	2,119	3,303	1,299	2,427	3,726
Inland	235,063	237,600	240,693	77.3%	22.7%	3,093	2,391	702	2,030	617	2,647	2,227	707	2,934
Columbia	22,077	22,316	22,595	72.2%	27.8%	279	201	78	171	68	239	188	78	266
Revelstoke	1,630	1,716	1,763	100.0%	0.0%	47	47	-	40	-	40	44	-	44
Whistler	2,977	3,045	3,070	75.8%	24.2%	25	19	6	16	5	21	18	6	24
Vancouver Island	124,627	129,764	132,861	79.0%	21.0%	3,097	2,447	650	2,077	571	2,648	2,278	654	2,932
Fort Nelson	1,880	1,860	1,836	75.0%	25.0%	(24)	(18)	(6)	(15)	(5)	21	(17)	(6)	(23)
Total FEU	955,626	965,847	976,170			10,323	6,482	3,841	5,503	3,375	8,877	6,037	3,866	9,903

10
11 For example, the Lower Mainland 2024F SFD value of 1,299 (column I) is derived as follows:

- 12 • Lower Mainland 2022 Internal Split – SFD percentage = 36.6% (column A);
- 13 • Lower Mainland 2022 Actual additions = 3,806 (column C)

14
$$LML\ 2022\ Actual\ SFD = 36.6\% \times 3,806 = 1,394\ (column\ D)$$

15
$$LML\ 2023\ Seed\ SFD = (1 - 15.1\%) \times 1,394 = 1,184\ (column\ F)$$

16
$$LML\ 2024\ Forecast\ SFD = (1 + 9.7\%) \times 1,184 = 1,299\ (column\ I)$$

17 4. COMMERCIAL CUSTOMER ADDITIONS

18 Commercial customer additions are calculated as an average of the net customer additions by
19 region and rate class from the prior three years.

20 The following table shows the customer additions for Lower Mainland RS 2.

1 **Table A3-6: Customer Additions for Lower Mainland RS 2**

	Year	Customers	Customer Additions	Average 2020-2022
		A	B	C
1	2019	54,211		
2	2020	54,619	408	
3	2021	54,671	52	
4	2022	54,702	31	164
5	2023S	54,866		164
6	2024F	55,030		164

2
3 Customer additions are calculated in column B. The three-year average of additions is shown in
4 C4 and is 164. 164 additions are forecast in each of 2023 and 2024.

5
$$2023S \text{ Customers} = 2022 \text{ Customers} + 3 \text{ Yr Avg Additions}$$

6 Using the data above:

7
$$2023S = 54,866 = 54,702 + 164$$

8 Identical calculations are completed for all regions and all small commercial rate schedules.

9 However, due to rate switching between the large commercial rate schedules (specifically RS 3
10 and RS 23), forecasting for these two classes was done as a group and then proportioned per
11 2022 customers distribution.

12 The following table shows how the Lower Mainland large commercial customer additions forecast
13 was developed. Other regions are similar.

14 **Table A3-7: Lower Mainland Large Commercial Customer Additions Forecast Development**

	Accounts	Customers			Total	3 Yr. Average	Proportion		
		RS 3	RS 23	Total			Total	RS 3	RS 23
		A	B	C			D	E	F
1	2019	5,347	505	5,852					
2	2020	5,075	430	5,505	(347)				
3	2021	5,240	391	5,631	126				
4	2022	5,415	320	5,735	104	(39)	(37)	(2)	
5	2023S	5,378	318				(37)	(2)	
6	2024F	5,341	316				(37)	(2)	

15
16
17 For each actual year (rows 1-4) the rate class customers from columns A and B are summed in
18 column C.

19 Aggregate customer additions are shown in column D.

20 The three year average customer additions is (39) and shown in column E, row 4.

1 The 2022 proportion is calculated from columns A/C on row 4.

2 For example, the RS 3 proportion is:

3
$$RS\ 3\ Proportion = \frac{5,415}{5,735} = 0.94$$

4 The proportion of the aggregate customer additions (37) is assigned to RS 3 is then:

5
$$RS\ 3\ Customer\ Additions = 0.93 \times (-39) = -37$$

6 A similar calculation is performed for RS 23 to arrive at (2) customer additions.

7 On row 5 the 2023S customer additions for RS 3 are shown in column A and calculated as:

8
$$2023S = 5,378 = 5,415 - 37$$

9 The remaining calculations are similar.

10 **5. RESIDENTIAL AND COMMERCIAL USE RATES**

11 **5.1 THE EXPONENTIAL SMOOTHING METHOD**

12 FEI develops its use rate forecasts based on 10 years of annual use rates by region and rate
13 class. The UPC values are weather-normalized using the process set out in Section 2 above.

14 The 10 years of data is used to calculate the UPC forecast using ETS, as implemented in
15 Microsoft Excel.

16 ETS is implemented as both a formula and “wizard” in Excel 2016. Intermediate calculations and
17 steps are not exposed or reproducible. Microsoft has not published, and is unlikely to publish, the
18 specific algorithms and procedures used in its software.

19 The UPC method for Lower Mainland RS 1 (residential) is demonstrated below. All residential
20 and commercial use rate forecasts in all regions are developed using the same method.

21 **5.1.1 Lower Mainland RS 1 UPC Example**

22 The forecast UPCs for Lower Mainland RS 1 were calculated as follows:

23 Start with ten years of weather normalized annual UPCs:

24

LOWER MAINLAND	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022
Rate 1	96.0	94.7	94.2	98.2	96.4	95.8	92.1	97.3	96.3	93.6

25 In Excel, the “forecast.ets()” function is used to calculate the 2023 and 2024 forecasts.

LML	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024
Rate 1	96.0	94.7	94.2	98.2	96.4	95.8	92.1	97.3	96.3	93.6	=FORECAST.ETS(M8,C9:L9,C8:L8,0,0,1) FORECAST.ETS(target_date, values, timeline, [seasonality], [data_completion], [aggregation])	

1
2 The resulting forecasts for 2023 and 2024 are shown:

LML	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023S	2024F
Rate 1	96.0	94.7	94.2	98.2	96.4	95.8	92.1	97.3	96.3	93.6	95.2	95.1

3
4 **5.2 AMALGAMATION OF UPCs IN FIS**

5 Once the use rates are seasonalized and developed for each region and each rate schedule (RS
6 1, RS 2, RS 3 and RS 23), they are entered into FIS. The amalgamated use rates are calculated
7 using the following relationship:

8
$$Use\ Rate = \frac{\sum Volume}{\sum Accounts}$$

9 FIS calculates both the monthly volume and accounts by region and rate class. In an external
10 spreadsheet the volumes and accounts are summed by month and by rate class for all regions.

11 **6. RESIDENTIAL AND COMMERCIAL DEMAND FORECAST**

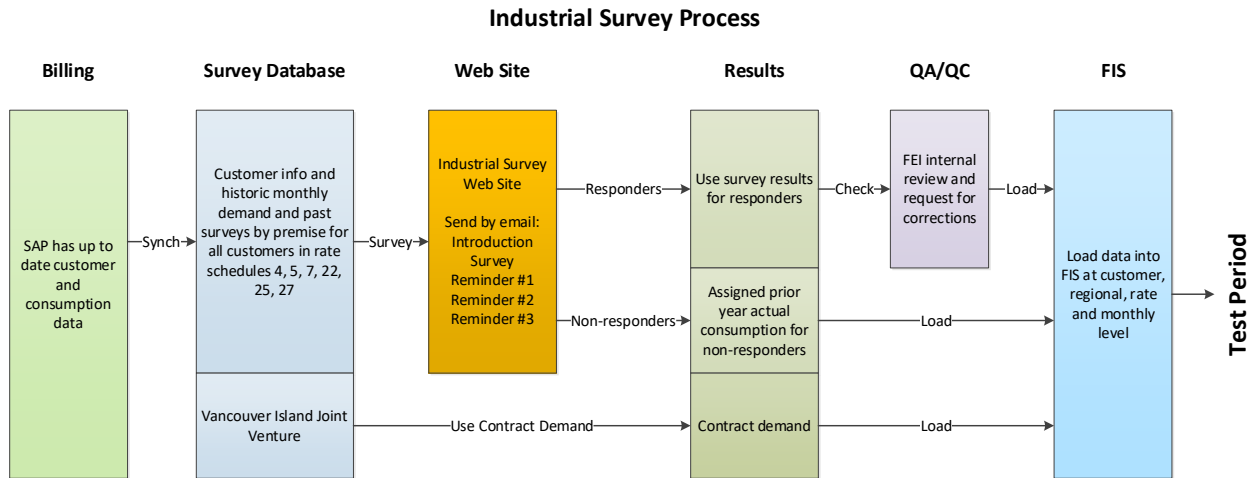

12 The residential and commercial demand forecasts are the products of the monthly customer
13 forecast and the corresponding monthly use rates forecast at the sub-regional level. The sub-
14 regions, regions and months are then summed to arrive at the amalgamated demand forecast.

15 **7. INDUSTRIAL DEMAND FORECAST**

16 The industrial demand is forecast using a web-based survey system. The following diagram
17 shows the main steps of process.

1

Figure A3-2: Industrial Forecast Process

2

3 Each customer in each industrial class receives a customized email message with a secure link
 4 to their individual survey. The customer then uses the web based survey to complete their forecast
 5 of demand for the next five years and submits it to FEI. Once the survey is closed (typically after
 6 six weeks duration), the survey responses are checked and then the data is loaded into the FIS
 7 system. The following sections describe the process in detail.

8 **7.1 CREATE THE SURVEY**

9 Prior to the start of the survey FEI creates a new survey using a web-based application. For the
 10 annual survey all industrial classes are selected. Commercial and residential customers are not
 11 surveyed.

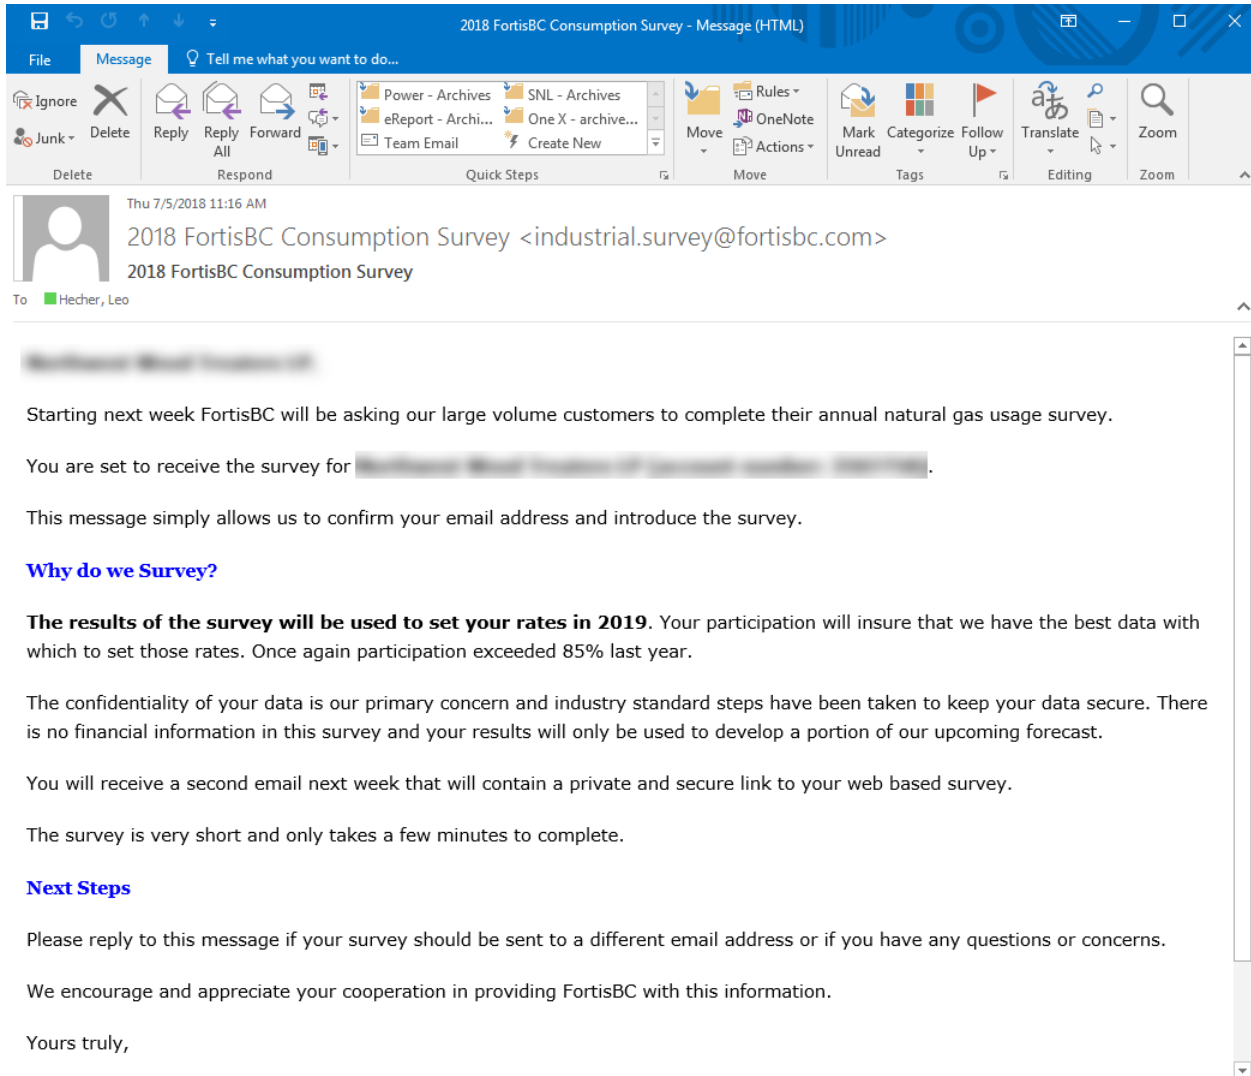

12 **7.2 SEND OUT THE INTRODUCTION EMAIL**

13 The customer is introduced to the survey several days before the actual surveys are sent out.
 14 This allows the customer time to update their contact information and possibly to assign the survey
 15 to a different employee if there have been staffing changes. FEI has found this to be an important
 16 step and contributes to the high success rate because a minimal number of surveys are sent to
 17 the wrong person.

18 The survey web site creates the form letters and manages the send out. The following is an
 19 example of the introductory email.

1

Figure A3-3: Survey Introductory Email Example

2

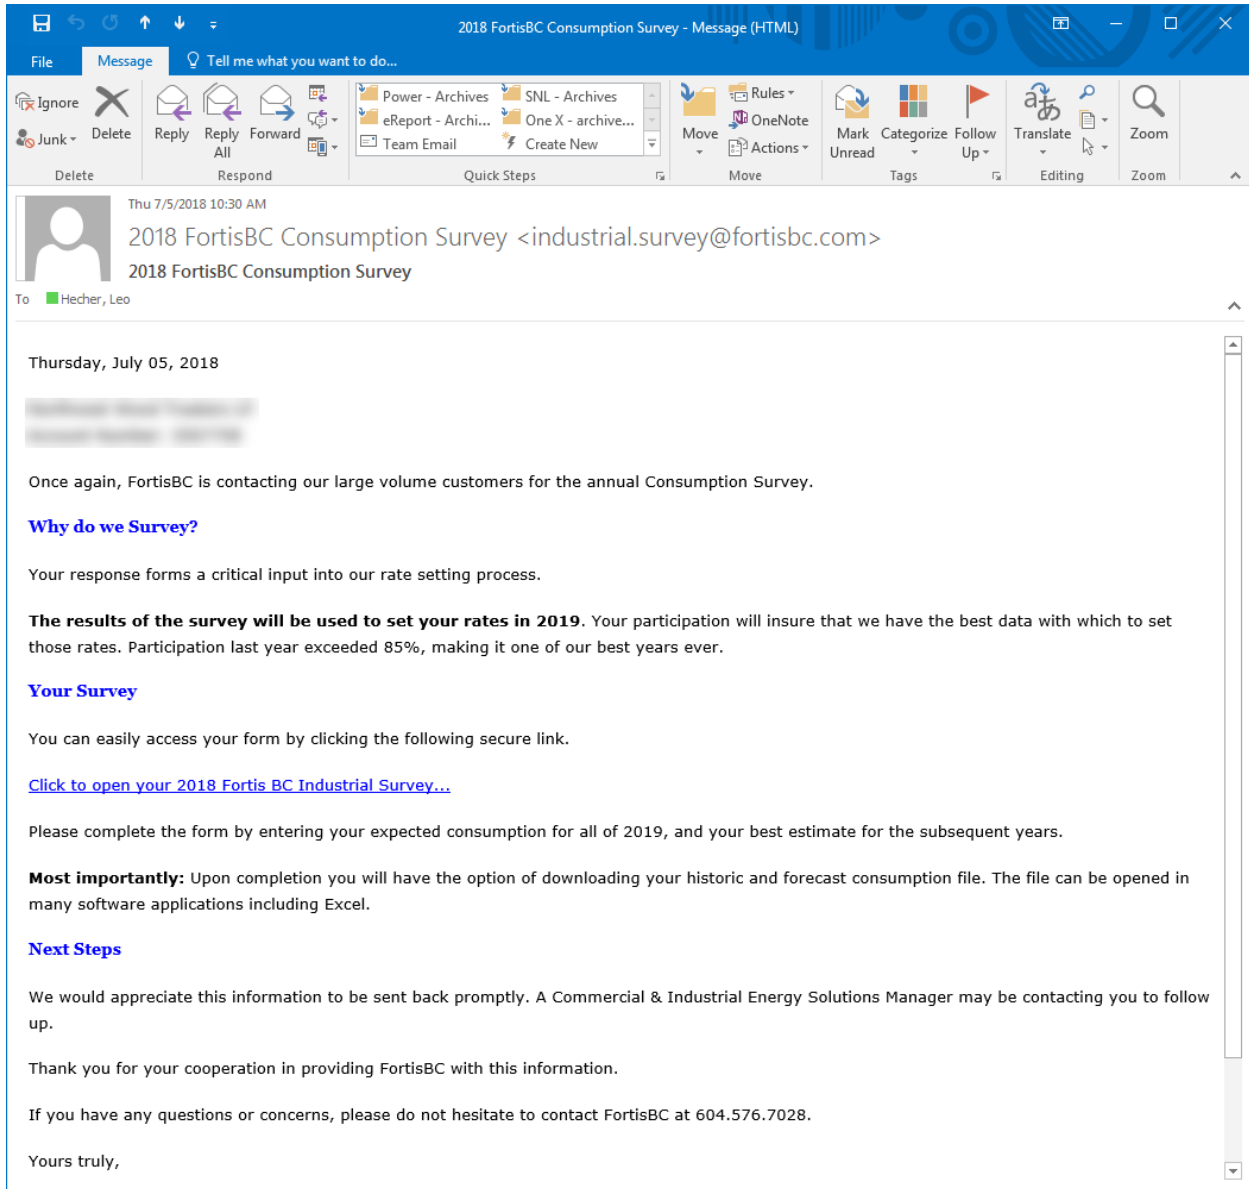

3 Replies to these emails are used to update the contact and other information in the survey web
4 site.

5 **7.3 SEND OUT THE SURVEY EMAIL**

6 An email with a customized link to the survey is sent out several days after the reminder. The
7 survey is not sent until all the changes that resulted from the introductory email have been
8 processed. As in the following sample email, each customer is sent an HTML link to the survey.
9 An encrypted globally unique identifier in the link insures that customers cannot access surveys
10 from other customers.

1

Figure A3-4: Survey Email Example

2

3 7.4 SURVEY FORM

4 The following web form is displayed to the user after the link in the email has been clicked.

1

Figure A3-5: Survey (Web) Form Example

Please note that the results of the survey will be used to set your 2018 rates. The secure link to your survey is below.

Account Number: [Redacted]

Premise Number: [Redacted]

2019	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	0

Projected Annual Consumption Data (Please enter estimated annual GJ's below) (5)

2020: 2021: 2022: 2023:

(6)

2

1 Notes:

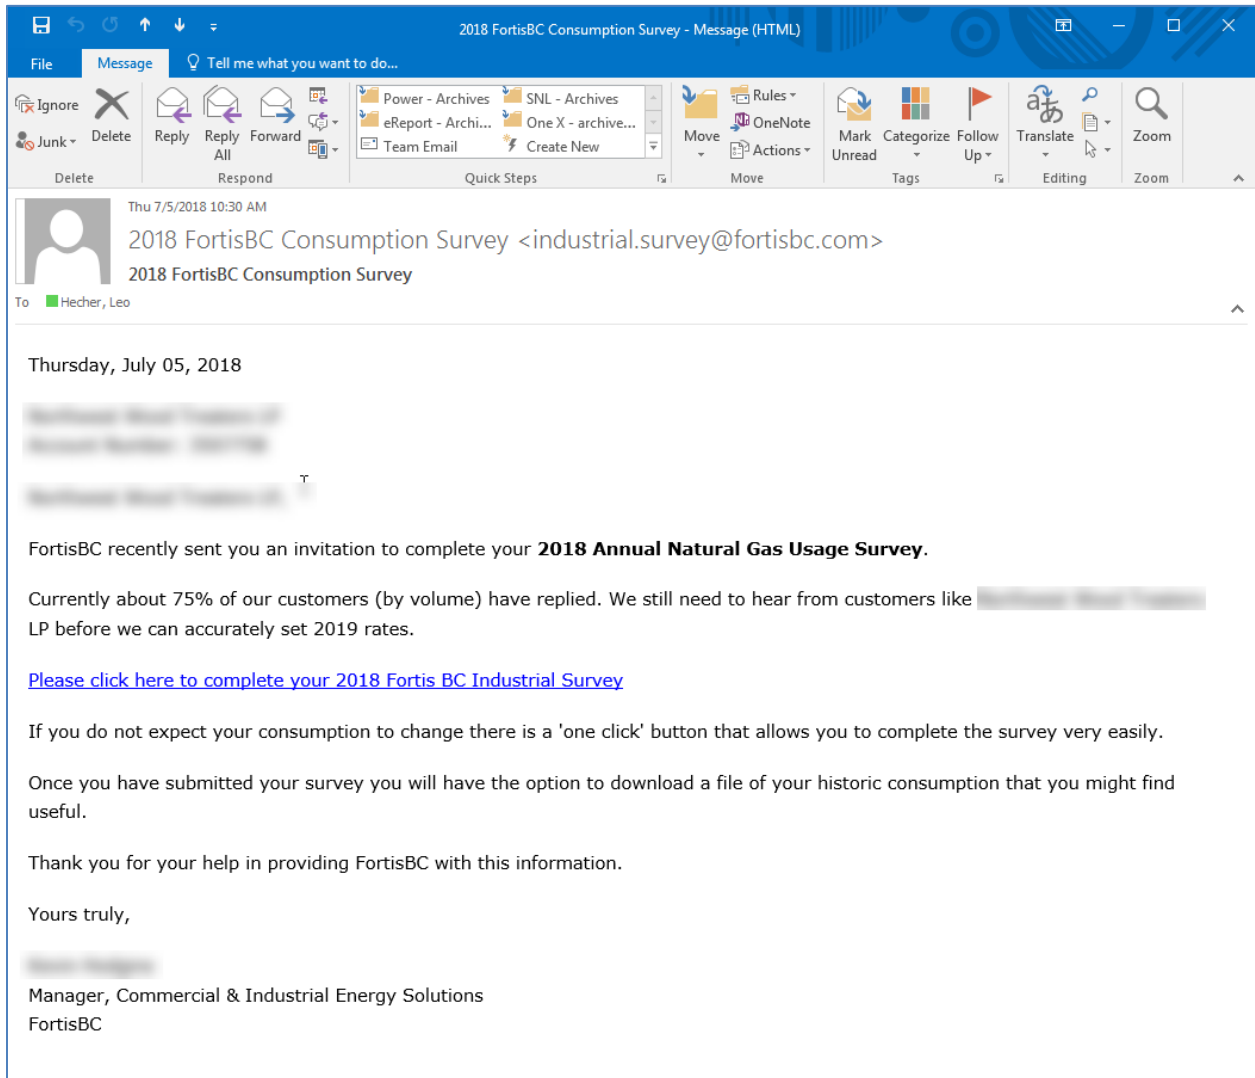

- 2 1) The user can change the contact name (normally a person's name), email and phone
3 number. It is saved and will be used in subsequent years. This allows the recipient to
4 redirect next year's survey.
- 5 2) A line chart showing the customer's actual historic consumption is shown for the prior five
6 years. The customer can use the pick list to show a chart that shows last year's actual
7 consumption and last year's survey. This allows the customer to see any variance in their
8 survey from last year.
- 9 3) A table of historical consumption is shown for the prior five years. Zeroes are shown in
10 this example because the survey database is not updated until the start of a real survey.
- 11 4) The customer is asked for monthly consumption for the coming year. The total at the right
12 side is automatically updated to reduce typing errors. If the customer believes that its
13 consumption is not changing, they can use the "Same as last year" button as a fast
14 alternative to typing in the same values.
- 15 5) Annual forecasts are requested for the remaining four years of the survey.
- 16 6) Once the data has been entered the user clicks the Submit button to save the survey.
17 Upon submitting the survey the user will be able to download a Microsoft Excel file
18 containing the data from Step 3 above.

19 **7.5 NON RESPONDERS AND THE REMINDER EMAIL**

20 Once the survey is started, responses start coming in within the hour. A steady response rate
21 normally continues for several days, but eventually slows. The survey system tracks the status of
22 each survey and at all times FEI knows the response rate. Until the target response rate is
23 reached, FEI sends out a weekly reminder email to those customers that have not yet responded.
24 The reminder email contains the same link to the survey. The reminder step enhances the
25 response rate of the survey. A sample is shown below:

1

Figure A3-6: Example of Survey Reminder Email

2

3 7.6 MONITORING THE RESPONSE RATE

4 The response rate for the survey is measured in terms of number of respondents and the volume
5 from those respondents. FEI is not only concerned with the number of customers that reply but
6 also the volume those customers represent. The response rate from a volumetric perspective is
7 always higher than the customer count response rate because large customers (for example
8 those in RS 22) are more likely to reply to the survey.

9 The response rate is measured by counting the number of responses compared to the number of
10 customers in the survey. Some customers will not respond because the survey has been sent to
11 an invalid email address. In these cases, FEI attempts to correct the address so that a survey can
12 be completed. FEI notes that if an address cannot be corrected during the time of the survey,
13 then the customer remains in the denominator of the response calculation ratio.

1 The following screen shot is for demonstration purposes only.

2 **Figure A3-7: Example of Survey Results Dashboard**

3

4 **7.7 REVIEWING THE SURVEYS**

5 Surveys from large volume customers are reviewed by the Forecast Manager and one or more
6 Commercial and Industrial Energy Solutions Managers. The Commercial and Industrial Energy
7 Solutions Managers are well informed about the issues with each individual customer and are
8 able to rationalize the survey received from the customer. Where surveys are contrary to the
9 information the Commercial and Industrial Energy Solutions Managers have, a follow up call is
10 made and the survey is adjusted if required.

11 **7.8 CLOSING OFF THE SURVEY AND LOADING FIS**

12 Once the target response rate has been achieved in early July, the survey is closed. The data in
13 the survey web site is then transferred automatically to the current forecast in FIS. Industrial rate
14 classes are forecast by individual customer so the data for each customer is copied. Checks are

- 1 completed to make sure that that data was copied properly and that the survey web site and that
- 2 the current FIS forecast are in sync.
- 3 Customers that do not respond to the survey are assigned their prior year's consumption.
- 4 FIS then sums the individual customer demand forecasts by rate class and region to develop the
- 5 industrial demand forecast.

6 **8. SUMMARY OF DEMAND FORECAST**

- 7 Once the customer additions, use rates and industrial demand calculations and data have been
- 8 completed, they are entered into FIS. FIS then aggregates the demand by month, region and rate
- 9 class to prepare the overall forecast of demand.

Appendix B

FEI 2024 CMAE BUDGET REVIEW

1 **FEI 2024 CORE MARKET ADMINISTRATION EXPENSE (CMAE)**
2 **BUDGET REVIEW**

3 **1.1 INTRODUCTION**

4 The CMAE budget funds the costs that FEI's Gas Supply department incurs to plan, manage and
5 optimize the commodity and midstream gas supply portfolios, mitigate unneeded resources,
6 manage the credit exposure to counterparties, and minimize the impact of unfavourable upstream
7 regulatory developments. As these activities serve core market customers and directly impact
8 commodity and midstream costs, the CMAE budget is recovered separately from delivery costs
9 through gas cost recovery rates.¹ FEI's 2019-2022 Actual, 2023 Approved, 2023 Projected, and
10 2024 Forecast for CMAE is set out in Schedule 1 to this appendix, in the format prescribed in
11 Appendix B to Order G-23-15.

12 As set out in the Approvals Sought (Section 1.2 of the Application) and in Section 4, FEI requests
13 BCUC approval of the following, effective January 1, 2024:

- 14 • approval of the 2024 forecast CMAE budget of \$6.050 million, as set out in Schedule 1;
15 and
- 16 • approval of the allocation of the 2024 forecast CMAE budget and actual costs between
17 the Commodity Cost Reconciliation Account (CCRA) and Midstream Cost Reconciliation
18 Account (MCRA) based on the allocation percentages of 30 percent and 70 percent,
19 respectively.

20 In compliance with the BCUC's Decision and Order G-79-14, FEI will continue to seek annual
21 approval of the CMAE budget as part of the Annual Review filings.

22 Further, pursuant to the BCUC's direction in the FEI Annual Review for 2020 and 2021 Delivery
23 Rates Decision and Order G-319-20, FEI will include a comprehensive review of the CMAE
24 (Comprehensive CMAE Review) in its next revenue requirements or multi-year rate plan (MRP)
25 application following the MRP term.

26 The following describes the 2024 Forecast CMAE budget.

¹ The Gas Supply department is primarily funded through the CMAE budget. However, activities not directly related to the commodity and midstream portfolio functions, such as the on-system transportation work supporting the transportation services business, are included in FEI's O&M costs and recovered through delivery rates.

1 **1.2 DESCRIPTION OF CMAE BUDGET**

2 The principal purpose of activities funded by CMAE is to identify and secure safe, reliable and
3 cost effective gas supply resources that are required to meet the demand for natural gas by core
4 customers.

5 The CMAE budget is required for FEI staff and resources that are necessary:

- 6 • to plan and optimize gas supply requirements, and to prepare FEI's Annual Contracting
7 Plans and Price Risk Management applications;
- 8 • to secure and manage the gas supply resources on a daily basis and mitigate any
9 unneeded resources;
- 10 • to establish appropriate contracts with counterparties and manage any associated credit
11 exposure;
- 12 • to manage upstream regulatory developments in order to protect the interests of
13 customers, including minimizing unfavourable outcomes and identifying and supporting
14 opportunities that are beneficial to customers; and
- 15 • to complete the support activities related to the gas supply technology platforms, financial
16 reconciliations and settlements with counterparties, as well as the finance, regulatory, tax,
17 and other reporting and compliance requirements.

18 Carrying out these responsibilities is critical given that the gross cost of the commodity and
19 midstream gas supply portfolios is currently approximately \$700 million per year.² These costs
20 can change dramatically given commodity price volatility and changes in transportation and
21 storage costs.

22 Developing and maintaining effective gas supply portfolios requires the evaluation of resources
23 available to meet normal, design winters, and peak day core load requirements. This work
24 includes:

- 25 • support activities such as portfolio modelling and resource assessment;
- 26 • regional supply and demand analysis, discussions and meetings with pipeline and storage
27 operators, and the maintenance of strong relationships with gas producers and marketers;
- 28 • negotiation and administration of commodity, pipeline and storage contracts;
- 29 • staying apprised of new regional infrastructure developments; and
- 30 • seeking opportunities for contracting resources related to cost-effective pipeline or storage
31 capacity expansions or additions.

² Based on the commodity and midstream costs for the prospective 12-month period forecast in the FEI 2023 Second Quarter Gas Cost Report dated June 7, 2023.

1 The general availability of these resources is influenced by the upstream regulatory framework
 2 that underpins the investment in regional infrastructure and supports commercial activity. Active
 3 involvement in upstream regulatory matters is required to manage the evolution of this regulatory
 4 framework so that the interests of FEI and its customers continue to be protected. This work is
 5 also important because it enables effective ongoing mitigation activities to be performed by gas
 6 supply. The specialized expertise required to complete these activities enables the achievement
 7 of incremental revenue that offsets the cost of gas. Depending on market conditions, this effort
 8 can result in substantial cost-reducing revenue. Customers benefit directly from this work through
 9 lower rates.

10 Table B-1 below provides a summary of the 2023 Approved, 2023 Projected and 2024 Forecast
 11 CMAE amounts. Schedule 1 included in this appendix provides a breakdown of the expense
 12 components and amounts summarized in Table B-1. Section 1.5 of this appendix provides further
 13 descriptions of the various expense components comprising the Labour, Non-Labour, and Shared
 14 Services groupings.

15 **Table B-1: CMAE Summary (\$ millions)**

	Approved 2023	Projected 2023	Forecast 2024
Labour	\$ 3.114	\$ 3.018	\$ 3.180
Non-Labour	1.967	2.063	2.152
Shared Services	0.714	0.714	0.718
Total CMAE	\$ 5.795	\$ 5.795	\$ 6.050

16
 17 The level of the CMAE budget is determined by the scope of work required to meet the
 18 responsibilities described above, as well as annual inflationary increases and changes in the US
 19 to Canadian currency exchange rate. The Consulting and Legal component of the CMAE budget,
 20 for example, is typically variable year-over-year and may need to increase in a year when
 21 significant upstream regulatory developments require intervention in proceedings. Conversely,
 22 the budget requirement will generally decrease when the overall level of upstream regulatory
 23 intervention is lower.

24 The CMAE activities are provided on the basis of a common administrative function and the costs
 25 are allocated to the gas supply commodity and midstream portfolios. Consistent with previous
 26 years, this allocation assigns 30 percent of CMAE costs to the CCRA and 70 percent to the
 27 MCRA. This allocation will be reviewed as part of the scope of the Comprehensive CMAE Review.

28 **1.3 REGULATORY TREATMENT OF CMAE**

29 The forecast CMAE costs are included as a component of the forecast gas costs for the purposes
 30 of determining the commodity and midstream (storage and transport) cost recovery charges.

1 Variances between the actual gas costs incurred and the forecast gas costs embedded in
2 recovery rates are captured in the gas cost deferral accounts and, subject to BCUC approval,
3 these variances are refunded to or recovered from customers as part of future commodity and
4 midstream rates.

5 At the end of each year, the Company files its gas cost status report with the BCUC, which
6 provides a summary of the cost and recovery variances and provides explanations for any
7 material variances. The actual year-end 2023 CMAE costs and variances to the approved budget
8 will be submitted, in the format prescribed by the BCUC, as part of the FEI 2023 CCRA and MCRA
9 Status Report due to be filed by April 30, 2024.

10 **1.4 PROJECTED 2023 CMAE COSTS**

11 While Table B-1 offers a high level summary of the CMAE costs for 2023 and 2024, Schedule 1
12 provides greater detail and has been prepared in the prescribed format of Appendix B to Order
13 G-23-15. The schedule presents the 2023 Approved and 2023 Projected CMAE amounts,
14 including variances and explanations. As well, Schedule 1 provides a summary of the Actual
15 2019-2022 CMAE costs, and the 2024 Forecast CMAE budget.

16 The year-end costs shown in the 2023 Projected column in Schedule 1 are based on the actual
17 costs incurred to May 31, 2023 and the projected costs for the remainder of the year. The
18 Company projects that overall the 2023 CMAE costs will total \$5.795 million, consistent with the
19 2023 Approved amount. Schedule 1 provides a breakdown of the variances, including
20 explanations, between 2023 Approved and 2023 Projected CMAE amounts at the individual cost
21 component level.

22 The year-end 2023 Projected CMAE costs, including all variances at the cost component level
23 from the 2023 Approved CMAE budget, reflect the prudent management of commodity and
24 midstream gas supply costs. Consistent with past practice, the actual costs will flow through to
25 customers as part of future commodity and midstream rates.

26 **1.5 FORECAST 2024 CMAE COSTS**

27 As reflected in Schedule 1 in the 2024 Budget Request column, the Company is seeking approval
28 of the 2024 CMAE budget in the amount of \$6.050 million, which is \$0.255 million higher than
29 2023 Approved. The increase from 2023 Approved is primarily related to inflation based on the
30 forecast labour and non-labour inflation factors. As well, the forecast includes changes in the
31 service levels related to various non-labour components that have been identified. Explanations
32 of the 2024 CMAE budget by cost component are set out below.

1 **1.5.1 Information Systems**

2 The 2024 Forecast Information Systems (IS) budget of \$0.420 million is \$0.012 million higher than
3 the 2023 Approved. The budget includes the forecast costs of the annual software maintenance
4 and support requirements for the Horizon Energy Trading and Risk Management (ETRM) system.
5 The Horizon ETRM system implemented for Gas Supply in 2022 was also being used by Aitken
6 Creek Gas Storage ULC (ACGS). Enbridge ACGS Acquisition Inc. has applied to the BCUC to
7 acquire control of the shares of ACGS. FEI has assumed for the purposes of the 2024 CMAE
8 Forecast that the acquisition will be approved, and has therefore increased the allocation of the
9 forecast annual Horizon ETRM software maintenance costs to FEI. This increase is substantially
10 offset by lower support requirements being forecast for Gas Supply as post-implementation
11 stabilization occurs.

12 **1.5.2 Consulting and Legal**

13 The 2024 Forecast Consulting and Legal budget of \$0.700 million is based on the forecast of
14 upstream regulatory work anticipated to occur in 2024; it also includes a forecast for the consulting
15 and legal work required to support the gas supply portfolio, including impacts related to renewable
16 gas supply and the Annual Contracting Plan.

17 Upstream regulatory matters impact FEI in a variety of ways, including its ability to transact for
18 gas supply at fair market prices and through the costs that are reflected in fixed transportation
19 tolls. The Company's participation in such proceedings, either directly or as a member of the
20 Western Export Group (WEG), provides significant benefit to customers, as increases to the
21 commodity market prices and upstream pipeline tolls and tariffs directly impact gas supply
22 portfolio costs.

23 The degree of involvement in upstream regulatory matters that may be required in any given year
24 is typically difficult to foresee with accuracy as it is driven by third party applications to national
25 regulators (the Canada Energy Regulator (CER) in Canada and the Federal Energy Regulatory
26 Commission (FERC) in the United States), who determine the scope and timeline of any review.
27 The nature of these applications, and issues they potentially create, drive the scope of FEI's
28 involvement, ranging from simple monitoring to full participation in oral hearings. The costs
29 incurred by this involvement are, as a result, highly variable. To help manage the costs of this
30 involvement, FEI is a member of the WEG, which shares costs relating to matters concerning TC
31 Energy's NOVA Gas Transmission Ltd. (NGTL) and FoothillsBC systems.

32 **1.5.3 Subscriptions & Memberships**

33 The 2024 Forecast for Subscriptions & Memberships of \$0.858 million has increased substantially
34 compared to the 2023 Approved. The budget is based on the forecast costs for the required
35 services. The 2024 Forecast includes inflationary increases to the various subscriptions and
36 membership dues, as well as the contractual increases that are related to sole source
37 subscriptions for commodity price services. The inflationary increases on the subscriptions

1 denominated in US dollars are partially offset by the US to Canadian currency exchange rate
2 assumption improving from that used in the 2023 Approved amount. The 2024 Forecast also
3 reflects, due to the anticipated sale of ACGS, the loss of cost savings related to sharing the costs
4 of some subscriptions with ACGS. Due to the nature of these subscriptions, there is generally no
5 reduction in the cost of the subscription associated with a decrease in the number of individual
6 users.

7 **1.5.4 Sundries**

8 The 2024 Forecast for Sundries of \$0.039 million has decreased slightly from the 2023 Approved
9 amount. The budget is based on the forecast regulatory proceeding costs related to BCUC gas
10 supply applications during the year, as well as the recurring expenditures for facilities
11 communications and data charges, and other miscellaneous costs.

12 **1.5.5 Training & Travel**

13 The 2024 Forecast for Training & Travel of \$0.135 million has increased from the 2023 Approved.
14 The 2024 Forecast is based on the forecast activity, including inflation.

15 **1.5.6 MoveUP Labour**

16 The 2024 Forecast for MoveUP Labour of \$0.654 million has remained generally unchanged from
17 the 2023 Approved amount, with lower forecast benefits loadings substantially offsetting forecast
18 salary inflation. The 2024 Forecast is based on the forecast of labour, including cross-charging,
19 inflation, and benefits loadings.

20 **1.5.7 M&E Labour**

21 The 2024 Forecast for M&E Labour of \$2.526 million has increased slightly compared to the 2023
22 Approved amount primarily due to forecast salary inflation. The 2024 Forecast is based on the
23 forecast of labour, including cross-charging, inflation, and benefits loadings.

24 **1.5.8 Shared Services**

25 The 2024 Forecast for Shared Services of \$0.718 million has increased slightly compared to the
26 2023 Approved. The 2024 Forecast is based on a minor reduction in the forecast service level
27 requirements substantially offsetting the inflationary increases related to labour and facilities
28 workspace costs. The Shared Services charge relates to the transfer of costs for services
29 provided to gas supply from other areas of the Company. The Shared Services include the
30 provision of management oversight, core customer load forecasting, office workspace and
31 technology requirements, and internal legal, tax and treasury support for counterparty contracts
32 and credit analysis.

1 **1.6 SUMMARY**

2 The Company has reviewed its requirements for 2024 and forecast its CMAE costs accordingly.
3 The level of the 2024 Forecast CMAE is required to ensure that the Company is able to prudently
4 manage commodity and midstream gas supply costs. Further, the methodology used for
5 allocating CMAE costs to the gas supply commodity and midstream portfolios remains consistent
6 with that of previous years.

Schedule 1

Line #

1	CMAE Cost Component	2019	2020	2021	2022	2023				2024	
2	(\$000, unless specified otherwise)	Actual	Actual	Actual	Actual	Approved	Projected	Variance	Variance %	Variance Explanation	Budget Request

Notes: Canadian Office and Professional Employees Union, Local 378 (COPE) known as Movement of United Professionals (MoveUP).

(1) Company-wide Salaries have been adjusted for items not attracting benefit loading such as overtime, premiums, retiring allowance, temporary MoveUP employee salary, and other adjustments.

(2) CMAE Salaries before cross-charging have been adjusted for items not attracting benefit loading such as overtime, premiums, retiring allowance, temporary MoveUP employee salary, and other adjustments.

(3) Approved, Projected, and Budgeted Benefits & Incentives are included in a single labour loading rate based on budgeted amounts; breakdown is not available until after year-end.

(4) Data shown reflects incentive payments are made in the following fiscal year (e.g. 2018 payment amounts based on 2017 performance results). Effective April 1, 2015 MoveUP Gas employees no longer receive incentives.

1 **1. PROJECT BACKGROUND**

2 **1.1 PROJECT BACKGROUND**

3 On June 1, 2022, pursuant to sections 59 to 61 of the *Utilities Commission Act* (UCA), FortisBC
4 Energy Inc. (FEI) filed an application (RGSD Application) with the British Columbia Utilities
5 Commission (BCUC), for approval of a new non-rate base deferral account called the Regional
6 Gas Supply Diversity (RGSD) Development Account, to capture actual development costs
7 incurred for a potential RGSD Project (Project). In the Application, FEI proposed to file quarterly
8 progress reports to the BCUC on work completed, anticipated work, and material developments,
9 starting with the quarter ending at least three months after the BCUC’s decision on the Application.

10 On September 14, 2022, the BCUC issued Order G-253-22 granting approval to establish the
11 RGSD Development Account, a non-rate base deferral account attracting FEI’s WACC return, to
12 capture actual development costs incurred with respect to the potential RGSD Project, with
13 disposition of the deferral account balance to be determined in a future proceeding.

14 Order G-253-22 directed FEI to provide Quarterly Progress Reports to the BCUC on work
15 completed, anticipated work, and material developments on the potential RGSD Project, starting
16 with the fourth quarter ending December 31, 2022, by no later than 30 days after the date of the
17 quarter end. Order G-253-22 further directed that in lieu of the July 2023 quarterly report, FEI was
18 to provide the update in the Annual Review for 2024 Delivery Rates process, including an update
19 of costs incurred to date and a proposal for the method and timing of the recovery of those
20 incurred costs.

21 This is the third Quarterly Progress Report for the Project (Report) which covers the period April
22 1, 2023 to June 30, 2023.

2. PROJECT DEVELOPMENT UPDATE, WORK COMPLETED AND COSTS INCURRED TO DATE

2.1 RGSD PROJECT DEVELOPMENT UPDATE

As described in the RGSD Application, preliminary engineering assessment and meaningful and comprehensive engagement and collaboration with stakeholders and Indigenous Nations prior to beginning Project approval processes is critical to ensure the RGSD Project, at the point of readiness for submission for approvals, has reasonable support and confidence on the Project concept and design. Engineering assessment work and supporting documentation on the RGSD Project has progressed in a measured and prudent manner. FEI's project phase gate processes require that the RGSD Project go through a complex and detailed screening analysis to evaluate all RGSD sub-variants (i.e., evaluating other delivery points,¹ such as tie-ins to T-South at Kingsvale or Hope as described in Section 4.1.2 of the RGSD Application) prior to further advancing the pre-FEED work. As part of its screening analysis, FEI will also be exploring an integrated regional pipeline infrastructure solution, as these sub-variations of the RGSD Project might require capacity upgrades from Enbridge on T-South between Kingsvale or Hope and Huntingdon in order to deliver the incremental volume sourced from SCP.

Federal and provincial policies continue to progressively decarbonize emissions from all sectors, including the gas system. FEI anticipates that the RGSD Project will need to continue to identify, investigate, design and support appropriate infrastructure solutions that will help to meet clean energy targets and maintain the reliability of gas flows through BC, thereby improving marketplace liquidity, security and overall supply competitiveness.

These project development activities and regional market developments require time to complete and are in the best interests of FEI and its customers as they will allow FEI to utilize its recent discussions with stakeholders to avoid or adequately mitigate issues that may be related to pipeline capacity, design, route selection and construction activities.

The following sections provide an update on the project development work completed to date, including the work completed during this reporting period, anticipated work for the next reporting period and an update to the costs incurred to date.

2.2 PROJECT DEVELOPMENT WORK COMPLETED IN THIS PERIOD

In Q2 of 2023 the Project development work focussed on initiating screening analysis and activities as discussed below:

¹ As currently envisioned, the RGSD Project involves an extension of the SCP from its current endpoint at Oliver to a new endpoint at Huntingdon.

- 1 • FEI engaged five external consultants to initiate specialist technical work on all sub-
2 variants of the RGSD Project;
- 3 • FEI completed two risk workshops to identify risks and opportunities to inform a project
4 risk register; and
- 5 • FEI continued to provide information on the Project to First Nations through meetings and
6 other communications and identified next steps for further engagement.

7 **2.3 SUMMARY OF PROJECT DEVELOPMENT WORK COMPLETED TO DATE**

8 The project development work completed to date spans a period from November 2021 to June
9 2023 and is divided into two phase gates: a Preliminary and Conceptual Phase (Pre-Phase 1);
10 and a Screening and Pre-Feed Phase (Phase 1). Project development activities completed to
11 date under each phase are summarized in the sections below.

12 **2.3.1 Pre-Phase 1 Work Completed**

13 As discussed in Section 6.2.1.1 of the RGSD Application, the RGSD Project is an evolution of
14 previous work related to assessing an extension of the SCP. FEI had already completed some
15 assessment work over the past few years, both internally and with the assistance of engineering,
16 geotechnical and environmental consultants. FEI has been able to use some of the historical
17 information to assist in completing the following activities for the RGSD Project related to the SCP
18 compressor upgrades and a new pipeline segment between Oliver and Huntington:

- 19 • Class 5 capital cost estimate for the pipeline extension and compressor station additions;
- 20 • A desktop geotechnical hazard assessment;
- 21 • Environmental constraints analysis;
- 22 • Land and right of way requirement assessment to inform cost estimates; and
- 23 • Ongoing analysis of FEI's system to understand implications of hydrogen transportation.

24 **2.3.2 Phase 1 Work Completed to Date**

25 The Project development activities completed by FEI to date during Phase 1 are as follows:

- 26 • Continued to build out the Project team and appointed a team focussed on the
27 development of the Project.
- 28 • Advanced the vetting of qualified pre-Feed consultants by completing a request of
29 expressions of interest procurement process.
- 30 • Advanced consultancy scopes to support screening activities and analysis.

- 1 • Developed a plan and schedule for an assessment to include all the delivery point sub-
2 variants, namely T-South connections at Kingsvale and Hope.
- 3 • Developed a concept for a path to determine and mitigate carbon footprint and schedule
4 for all of the Project's sub-variants.
- 5 • Continued to engage with First Nations on the Project concept. Through meetings and
6 other communications, provided information on the Project, discussed challenges and
7 opportunities, and identified next steps for further engagement. The summary of
8 Indigenous engagement completed to date is discussed further in Section 2.3.2.1 below.

9 ***2.3.2.1 Indigenous Engagement Completed to Date***

10 Indigenous engagement and participation is a critical component of the RGSD Project. As a result,
11 FEI began engagement with Indigenous communities early on by sharing the project concept.
12 The purpose of this was to gather feedback from First Nations and incorporate that into the
13 conceptual project design. FEI's approach to collaboration was informed by its Statement of
14 Indigenous Principles, commitment to reconciliation, and understanding of the need for free, prior,
15 and informed consent.

16 FEI gathered information from the British Columbia Consultative Areas Database to identify which
17 Indigenous communities to engage. In addition, FEI had consultants review the approach. After
18 conducting an analysis, FEI decided to engage with the Nations most proximal to the proposed
19 project. Since early 2021, FEI has reached out to 30 First Nations and 6 tribal councils to discuss
20 the Project. FEI was successful in connecting with all tribal councils and 14 of the 30 First Nations.
21 FEI will continue to seek to connect with the remaining 16 First Nations.

22 FEI has held 56 meetings with Chief and Council and staff, conducted two aerial tours with two
23 Nations to review the route and gather feedback, and presented the project concept at an open
24 house to community members of another Nation. These meetings began as project introductions
25 and progressed into routing and compressor station location reviews, knowledge sharing and
26 partnership discussions. Some of the meetings evolved into working groups with staff members
27 and another Nation held regular meetings with FEI for project updates.

28 FEI understands First Nations require capacity funding agreements (CFA) to engage; therefore,
29 based on requests, a total of 13 CFAs were extended to First Nations of which 6 CFAs have been
30 confirmed.

31 In addition to the CFAs, FEI responded to community requests made by Nations and provided
32 funding for Indigenous community initiatives. FEI staff have attended over 15 local Indigenous
33 community events to learn and build stronger relationships.

1 **2.3.2.2 Project Schedule Summary**

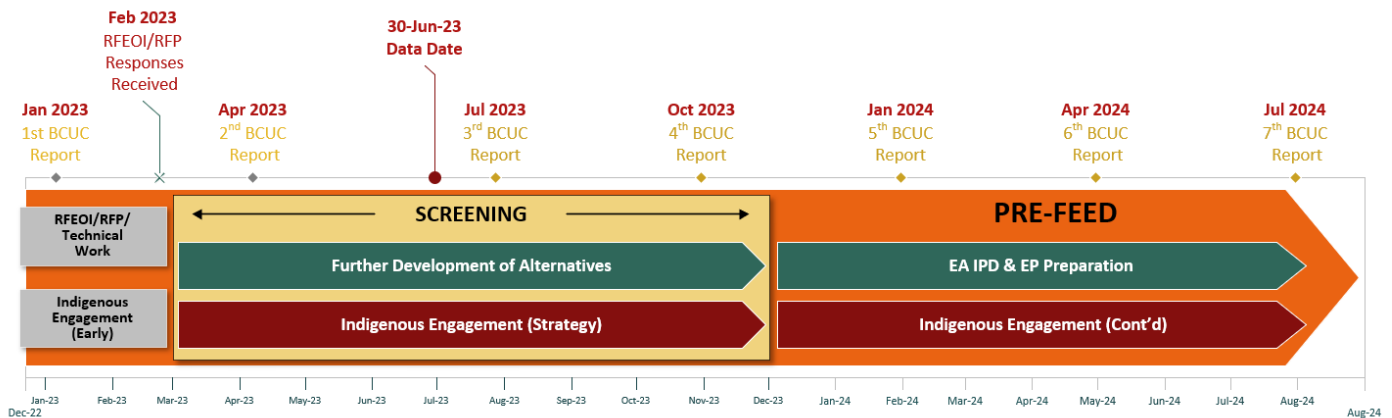

2 Table 2-1 below provides a summary of development activities that have been completed to the
 3 end of Q2 2023. FEI has initiated a detailed screening analysis to advance the Project to the point
 4 where FEI can decide which sub-variants of the RGSD Project need to be further evaluated for
 5 Pre-Feed. FEI has updated the preliminary Project Pre-Feed activities timeline (Figure 2-1 below)
 6 and plans to update the overall Project schedule in subsequent reports after the completion of
 7 screening analysis.

8 **Table 2-1: Status of Project Development Activities to Date**

Activities	Status
Advance Indigenous Nations engagement and stakeholder consultation efforts	In Progress
Initiate screening analysis for all three RGSD sub-variations	In Progress
Advance commercial discussions with prospective shippers for potential capacity on RGSD Project pipeline	In Progress
Develop Project Risk Register	In Progress

9

10 **Figure 2-1: Updated Preliminary RGSD Project’s Pre-Feed Activities Timeline**

11

12 **2.3.3 Project Development Costs Incurred to Date**

13 FEI has used a measured, prudent and diligent approach in progressing the initial phases of the
 14 Project development work completed to date to evaluate the RGSD Project and its sub-variants.
 15 As of the end of Q2 2023, FEI has spent a total of \$2.93 million including AFUDC and taxes. This
 16 compares to the \$23.7 million that FEI forecast at the time of the RGSD Deferral Account
 17 Application for work up to Q3 of 2023. Table 2-2 summarizes the development costs on an annual
 18 and a project phase gate basis.

1

Table 2-2: Project Development Cost Summary

Annual Cost Summary			
2021	2022	2023	Total Cost
\$0.47 million	\$1.43 million	\$1.03 million	\$2.93 million
Phase Gate Cost Summary			
Preliminary and Conceptual Phase (Pre-Phase 1) Nov 2021 to Sep 2022	Screening and Pre-FEED Phase (Phase 1) Oct 2022 – Jun 2023	Total Cost	
\$1.40 million	\$1.53 million	\$2.93 million	

2

1 **3. ANTICIPATED PROJECT DEVELOPMENT WORK AND**
2 **TREATMENT OF SUBSEQUENT COSTS**

3 **3.1 ANTICIPATED WORK PLAN FOR NEXT PERIOD**

4 The next quarterly reporting period will cover the period from July 1, 2023 to September 30, 2023,
5 and FEI anticipates that the following activities will be initiated and developed during the next
6 quarterly reporting period.

7 **Screening Analysis**

8 The project development work completed to date has provided FEI with a good understanding of
9 the SCP compressor additions and the new pipeline segment from Oliver to Huntington. As
10 mentioned in Section 2.1 above, FEI is undertaking a comprehensive screening analysis to
11 evaluate all options prior to initiating further Pre-Feed work. For the next stage of project
12 development, FEI will continue to advance its screening analysis to include the alternative delivery
13 points described in Section 4.1.2 of the RGSD Application, namely T-South tie ins to Kingsvale
14 and Hope.

15 The screening analysis will consist of multifunctional assessments of each of the delivery options
16 and will seek to bring into focus option(s) that would be viable candidate(s) for further
17 consideration. The work covered under this assessment will be comprised of but not be limited
18 to: pipeline engineering, geotechnical, environmental, regulatory, stakeholder and Indigenous
19 engagement, risk, construction, scheduling and cost estimating activities. Factored into the
20 assessment will be any impacts of these options on FEI's resiliency scenarios and commercial
21 agreements, and a long-term demand forecast.

22 In addition, with the introduction of the Province's plan related to GHG emissions reductions, all
23 options require a carbon footprint assessment, plan and schedule to achieve net zero. The results
24 of this work will be used to assist in the selection of the option(s) to be considered in the Pre-Feed
25 work to follow.

26 **Indigenous Engagement**

27 Indigenous engagement is a priority for advancing this Project and FEI will maintain dialogue with
28 the Indigenous Nations affected. Engagement will continue to focus on FEI having conversations
29 with First Nations to discuss interests and opportunities, setting up mutually agreed upon pre-
30 application engagement processes with First Nations, and continuing engagement according to
31 those plans.

32 **Public Consultation**

33 FEI plans to commence engagement with local governments and communities, once the
34 screening activities are developed, beginning with those most impacted by the Project.

1 **4. MATERIAL DEVELOPMENTS ON THE PROJECT**

2 **4.1 REGIONAL MARKET AND PIPELINE INFRASTRUCTURE UPDATE**

3 Developments with respect to regional infrastructure have an impact on FEI and the US Pacific
 4 Northwest operating marketplace. As discussed in the RGSD Application, the following market
 5 conditions have become even more pronounced, are outside of FEI’s control, and continue to
 6 drive the critical need for the new regional pipeline infrastructure.

7 1. **Constrained Capacity on T-South System:** The BC and US Pacific Northwest (Region)
 8 as a whole, including FEI, rely on Enbridge’s T-South system for the majority of their daily
 9 gas supply. The T-South system remains fully subscribed due to high demand in the
 10 Region. Over the past several years, market conditions have caused increased supply
 11 and pricing risks in the Region. The pricing volatility at the Huntingdon/Sumas market that
 12 occurred during and after the T-South Incident confirms FEI’s view that there is a limited
 13 amount of supply available at Huntingdon. The 2022/23 winter season demonstrated
 14 significant pricing scarcity across natural gas and power markets in the US Pacific
 15 Northwest demonstrating supply challenges that stemmed from lack of infrastructure and
 16 pipeline capacity. FEI’s strategy to incur demand tolls on the T-South system instead of
 17 purchasing gas at the Sumas hub has been a prudent choice, however, maintaining this
 18 strategy in the future would be challenging unless additional pipeline infrastructure is built.

19 2. **Forthcoming Increases in Regional Demand:** Constrained capacity in the Region will
 20 be further exacerbated by a number of major infrastructure projects proposed, including
 21 Woodfibre LNG, that require large volumes of baseload gas supply as feedstock. As well,
 22 natural gas usage for power generation has increased in the US Pacific Northwest, due to
 23 the retirement of coal plants. As the Region continues to try to replace the power
 24 generated by coal with renewable projects, it is uncertain what the future usage will be, as
 25 renewables are not sufficiently available at this time, and will be intermittent, depending
 26 on weather conditions. Natural gas and the power market in the US Pacific Northwest will
 27 continue to become more interconnected, as reliance on natural gas as the marginal
 28 resource is expected to continue.

29 3. **Decarbonization Initiatives:** A review of increasingly regional and federal public policy
 30 initiatives seeking to reduce GHG emissions presents FEI with an opportunity to continue
 31 to play a key role to innovate and implement solutions that help to create a lower-carbon
 32 future.

33 FEI will continue to monitor these ongoing changes to the regional market as they have a
 34 significant impact on maintaining access to cost-effective and reliable gas supply.

1 **4.1.1 Westcoast T-South Expansion Update (Sunrise Expansion Program)**

2 As discussed in the RGSD Application, FEI is mindful of the pace of development on Westcoast's
3 proposed T-South Expansion project. Westcoast provided indication in early 2022 of its intention
4 to seek shipper interest in a further expansion of T-South through a binding "open season" that
5 was conducted later in the year. The T-South expansion was initially expected to be a \$2.5 billion
6 expansion to provide up to 300 MMcf/day from pipeline looping and additional compression along
7 the line. On November 4, 2022, Enbridge confirmed that the open season was fully subscribed
8 for 300 MMcf/day, with a weighted average term of 65 years. Enbridge will not publicly disclose
9 the names of the successful bidders who were awarded the capacity until the expansion in-service
10 date. The cost of the expansion, originally estimated at \$2.5 billion earlier in 2022 by Enbridge,
11 has since been revised to up to \$3.6 billion in November 2022, which would lead to an even higher
12 toll increase for all T-South shippers than originally anticipated. Based on internal analysis, the
13 proposed expansion at a current estimated cost of \$3.6 billion will result in major toll increases of
14 over \$0.30/Mcf (over current 2023 tolls) for all full path T-South shippers. In May 2023, Enbridge
15 announced plans to file an application with the Canada Energy Regulator (CER) by mid-2024
16 which is expected to include updated cost estimates based on detailed studies that will include
17 Indigenous consultation and greater technical scoping. Enbridge anticipates that the expansion
18 capacity could be in-service no earlier than Q4 2028, contingent upon CER approval.

19 This T-South expansion, planned for as early as 2028, is being proposed to maintain gas flows to
20 the US Pacific Northwest region at current levels after the planned Woodfibre LNG project comes
21 online in 2027. It is expected that this capacity expansion will involve the construction of extensive
22 new loops and additional compression.

23 **4.2 FEI MUST CONTINUE WITH THE RGSD PROJECT DEVELOPMENT WORK**

24 FEI has long recognized that the extension of FEI's Southern Crossing Pipeline (SCP) – now
25 referred to as the RGSD Project – would provide additional regional capacity in a way that
26 provides significant benefits to FEI and its customers and reduces risks for them. In contrast, the
27 T-South Expansion project will have significant impacts on FEI customers with little to no benefits,
28 and FEI customers still face the potential for additional – and potentially even larger – T-South
29 expansions to address unresolved regional demand growth in the region. It is in the best interest
30 of FEI and its customers for FEI to continue to proceed with the project development work on the
31 RGSD Project.

1 **5. CONCLUSION**

2 As discussed in this Report, FEI has taken a diligent, prudent and measured approach to the
3 project development activities completed to date (i.e., until Q2 2023). The costs incurred to date
4 have been reasonable and prudently incurred to develop the Project concept.

5 In this initial phase of the development work, FEI primarily focused on the Indigenous engagement
6 activities, as early engagement and developing Indigenous support for the Project is key to its
7 success. FEI also successfully completed a request for expressions of interest and identified three
8 potential proponents capable of completing Pre-Feed work. In order to have meaningful and
9 comprehensive engagement and collaboration with stakeholders and Indigenous Nations prior to
10 beginning Project approval processes and to have reasonable support and confidence on the
11 Project concept and design, FEI determined to complete a detailed screening analysis on all three
12 sub-variations of the RGSD Project (i.e., to assess other delivery points, such as tie-ins to T-South
13 at Kingsvale or Hope) prior to advancing further Pre-Feed work.

14 Furthermore, to help manage the potential impact of decarbonization initiatives and policies
15 introduced by federal and provincial government, FEI will need to continue to identify, investigate,
16 and support appropriate infrastructure solutions that will help to meet these clean energy targets
17 and maintain the reliability of gas flows through BC and thereby improve marketplace liquidity,
18 security and overall supply competitiveness.

19 FEI's project development activities will allow FEI to utilize its recent discussions with
20 stakeholders to avoid or adequately mitigate issues that may be related to pipeline capacity,
21 design, route selection and construction activities.

22 FEI is also mindful of the proposed Westcoast's T-South Expansion project. The RGSD Project
23 development work must continue and proceed in a timely way so as to avoid FEI having to
24 underwrite the cost of the announced T-South Expansion, which as proposed, comes with little, if
25 any, upside for FEI and its customers in terms of access to supply, supply cost, resiliency, or
26 progress towards a renewable and low-carbon energy future.

Appendix D

PRIOR YEAR DIRECTIVES

Decision No.	Directive Page No.	Directive No.	Reference	Description / Details	Status	Section in this Application
G-79-14 – FEI 2014 CORE MARKET ADMINISTRATION EXPENSE (CMAE) BUDGET						
1.	10	2	CMAE Budget Review	<p>The Panel finds that the appropriate review process for the CMAE Budget is as part of the FEI revenue requirements applications. Therefore, until such time as FEI files its next revenue requirements application, the Panel directs FEI to submit future CMAE budgets separately to the Commission at least two weeks prior to the fourth quarter gas cost report to allow the Commission sufficient time to review the CMAE Budget, and to determine if there are sufficient variances from the previous CMAE Budget to warrant a more fulsome review.</p> <p>The Panel directs that the CMAE Budget review and approval process be included within the FEI revenue requirements application starting with the next such application by FEI.</p>	Ongoing	Appendix B
G-165-20 – FEI MULTI-YEAR RATE PLAN FOR 2020 THROUGH 2024						
2.	75	24	General Flow-through Deferral Account	The Panel directs FEI to provide a detailed analysis of the individual forecast variances recorded in the Flow-through deferral account in each Annual Review.	Ongoing during the MRP term	Section 12.4.2.2
3.	87	32	Efficiency Carry-Over Mechanism	<p>Therefore, the Panel determines the following process for the handling of an ECM application:</p> <ol style="list-style-type: none"> 1. An ECM can be applied for at any time in the last three years of the MRPs, either in advance or following the action or initiative being undertaken. 2. For proposed activities where identifiable savings are expected to extend beyond the term of the MRP, FortisBC is to file an ECM proposal describing the initiative, its timing, costs and benefits and savings. 3. Parties will have the opportunity to review and comment on the proposal and the BCUC will determine whether to approve the ECM proposal (an Approved ECM Initiative). 4. FortisBC must submit details of continued savings annually under an Approved ECM Initiative as part of the Annual Review process. The net savings will be shared equally between ratepayers and the Utilities will carry forward past the end of the MRP for a maximum period of three years. 	No Approved ECM Initiative to report on	n/a

Decision No.	Decision Page No.	Directive No.	Reference	Description / Details	Status	Section in this Application
4.	99-100	37	SQI Informational Indicators	<p>In addition to the SQIs, the Panel approves the following informational indicators for the Utilities:</p> <ul style="list-style-type: none"> • Customer Satisfaction Index (measures overall customer satisfaction) – FEI and FBC. • Average Speed of Answer (average number of seconds to answer emergency and non-emergency calls) – FEI and FBC. • Transmission Reportable Incidents (number of reportable incidents to outside agencies) – FEI only. • Leaks per KM of Distribution System Mains (number of leaks on the distribution system per KM of distribution system mains) – FEI only. <p>The Utilities are directed to report on these informational indicators along with the SQIs as part of the Annual Review process.</p>	Ongoing during the MRP term	Section 13
5.	115	40	System Operations, Integrity and Security Expenditures	<p>The Panel directs FEI to provide the following information related to System Operations, Integrity and Security expenditures in its future revenue requirements applications over the term of the Proposed MRPs:</p> <ol style="list-style-type: none"> 1. A breakdown and explanation of both annual and cumulative variances between forecast/actual and formula O&M related to System Operations, Integrity and Security expenditures, which quantify the variances attributable to the following areas: <ul style="list-style-type: none"> • Integrity management; • Maintaining system infrastructure; • Operations compliance and safety; • Cyber security; • Data analytics; • Gas control; • Canadian Energy Pipelines Association (CEPA) participation; and • Any other significant factors or miscellaneous items. 2. A description of how FEI is prioritizing its System Operations, Integrity and Security expenditures. 	Ongoing during the MRP term	Section 6.2.1
6.	156	61	Clean Growth Innovation Fund	<p>The Panel directs any unused balance in the deferral account to be returned to customers at the end of the Proposed MRP term through a disposal mechanism subject to approval by the BCUC.</p>	Will be reviewed in FEI's 2025 MRP application	n/a
7.	157	62	Clean Growth Innovation Fund	<p>The Panel further directs FEI to include progress preports on the operation of FEI's Innovation Fund and projects funded thereby.</p>	Ongoing during the MRP term	Section 10.3.4

Decision No.	Directive Page No.	Directive No.	Reference	Description / Details	Status	Section in this Application
G-319-20 – FEI ANNUAL REVIEW FOR 2020 AND 2021 DELIVERY RATES						
8.	11		Revenue Deficiency	The Panel directs FEI to present the amortization of flow-through and other deferral accounts separately from depreciation and amortization in future Annual Reviews.	Ongoing during the MRP term	Section 1.5
9.	16	9	CMAE Budget	The Panel directs FEI to include, in its next revenue requirements or MRP application following the MRP term, a comprehensive review of the CMAE costs including consideration of whether these costs are conducive to a formulaic approach or whether they should continue to be forecast with flow-through treatment, and whether the current allocation percentages to the CCRA and MCRA remain appropriate.	Will be reviewed in FEI's 2025 MRP application	n/a
G-253-22 – FEI APPLICATION FOR APPROVAL OF REGIONAL GAS SUPPLY DIVERSITY (RGSD) DEVELOPMENT ACCOUNT						
10.		3	RGSD Project	In lieu of the July 2023 quarterly report, FEI must provide as part of the FEI 2024 Annual Review: <ul style="list-style-type: none"> a. Reporting to the BCUC on work completed, anticipated work, and material developments on the potential RGSD Project; b. An update of the costs incurred to date; and c. A proposal for the method and timing of the recovery of those incurred costs. 	Complete	Section 12.4.2.1 and Appendix C
11.		4	RGSD Project	The recoverability and disposition of any costs recorded in the RGSD Development Account will be subject to BCUC review and determination in a future application, such as a subsequent FEI annual review or in a CPCN application for the RGSD Project.	Will be proposed in future application	n/a
G-278-22 – FEI APPLICATION FOR COMMON RATES AND 2022 REVENUE REQUIREMENTS FOR THE FORT NELSON SERVICE AREA						
12.	32	3	Fort Nelson Residential Customer Common Rate Phase-in Rate Rider	The Panel approves FEI to establish, for BCUC review, the actual Fort Nelson Residential Customer Common Rate Phase-in Rider each year in FEI's regulatory review process to set delivery rates, commencing in 2023, based on an updated forecast of FEFN's residential customer demand and the remaining balance of the deferral account each year for the five-year phase-in period.	Ongoing	Section 10.3.3

Decision No.	Directive Page No.	Directive No.	Reference	Description / Details	Status	Section in this Application
G-352-22 – FEI ANNUAL REVIEW FOR 2023 DELIVERY RATES						
13.	35		Public Contact with Gas Lines	Although this SQI is performing better than the benchmark, the Panel agrees with RCIA’s comment on the need for FEI to provide a better explanation as to why it nonetheless experiences higher numbers of gas line hits than its counterparts in other provinces. The Panel also agrees with both RCIA and FEI that further discussion regarding this SQI and any possible changes is best addressed during the next MRP application.	Will be addressed in FEI’s 2025 MRP application	n/a

Appendix E
DRAFT ORDER

ORDER NUMBER

G-xx-xx

IN THE MATTER OF

the *Utilities Commission Act*, RSBC 1996, Chapter 473

and

FortisBC Energy Inc.

Annual Review for 2024 Delivery Rates

BEFORE:

[Panel Chair]
Commissioner
Commissioner

on **Date**

ORDER

WHEREAS:

- A. On June 22, 2020, the British Columbia Utilities Commission (BCUC) issued its Decision and Order G-165-20 for FortisBC Energy Inc. (FEI) and Order G-166-20 for FortisBC Inc. (FBC), approving a Multi-Year Rate Plan (MRP) for 2020 through 2024 (MRP Decision). In accordance with the MRP Decision, FEI is to conduct an annual review (Annual Review) process to set the delivery rates for each year;
- B. By letter dated June 28, 2023, FEI proposed a regulatory timetable for the Annual Review of its 2024 delivery rates;
- C. By Order G-194-23, the BCUC established the regulatory timetable for the Annual Review of FEI's 2024 delivery rates, which included FEI filing its Annual Review materials, intervener registration, one round of information requests, a workshop, FEI's response to undertakings at the workshop, and written final and reply arguments;
- D. On July 28, 2023, FEI submitted its materials for the Annual Review for 2024 Delivery Rates Application (Application). In the Application, FEI requests a 4.50 percent delivery rate increase over the 2023 delivery rates, effective January 1, 2024, among other things; and
- E. The BCUC has reviewed the Application, evidence and arguments filed in the proceeding and makes the following determinations.

NOW THEREFORE pursuant to sections 59 to 61 of the *Utilities Commission Act*, for the reasons stated in the decision issued concurrently with this order, the BCUC orders as follows:

1. FEI is approved to recover the 2024 revenue requirement and resultant delivery rate change on a permanent basis, effective January 1, 2024, as filed in the Application and subject to any adjustments identified by FEI during the regulatory process and from any directives or determinations made by the BCUC in its decision on the Application.
2. FEI is approved to:
 - a. Establish the following rate base deferral accounts:
 - i. 2025 Multi-year Rate Plan (MRP) Application deferral account, with the amortization period to be determined in a future proceeding;
 - ii. 2023 Cost of Service Allocation (COSA) Study deferral account, with the amortization period to be determined in a future proceeding;
 - iii. 2024-2027 Demand Side Management (DSM) Expenditure Plan Application deferral account, with amortization over a four-year period commencing January 1, 2024; and
 - iv. PST Rebate on Select Machinery and Equipment deferral account, with amortization over a one-year period commencing January 1, 2024.
 - b. Amortize the existing Transportation Service Report deferral account over a one-year period commencing January 1, 2024.
3. FEI is approved to set the Biomethane Variance Account Rate Rider for 2024 in the amount of \$0.181 per gigajoule (GJ) as set out in Section 10.3.1.2 of the Application.
4. FEI is approved to set the Revenue Stabilization Adjustment Mechanism riders for 2024 in the credit amount of \$0.106 per GJ as set out in Table 10-5 in Section 10.3.2 of the Application.
5. FEI is approved to set the Fort Nelson Residential Customer Common Rate Phase-in Rate Rider for 2024 in the amount of \$0.863 per GJ as set out in Section 10.3.3 of the Application.
6. FEI's 2024 Core Market Administration Expense (CMAE) budget of \$6.050 million is approved, as set out in Appendix B to the Application, and FEI is approved to continue to allocate the CMAE costs between FEI's Commodity Cost Reconciliation Account and Midstream Cost Reconciliation Account at 30 percent and 70 percent, respectively.
7. FEI is directed to file as a compliance filing, the tariff continuity and billing impact schedules for 2024 no later than 10 days from the date of the issuance of this order.

DATED at the City of Vancouver, in the Province of British Columbia, this (XX) day of (Month Year).

BY ORDER
