Attention: Patrick Wruck, Commission Secretary

Dear Patrick Wruck:

Re: FortisBC Energy Inc. (FEI)

2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application) ~ Project No. 1599563

Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1

On July 20, 2023, FEI filed the Application referenced above. In accordance with the regulatory timetable established in BCUC Order G-218-23 for the review of the Application, FEI respectfully submits the attached response to BCUC IR No. 1.

If further information is required, please contact the undersigned.

Sincerely,

FORTISBC ENERGY INC.

4	C. REVENUE REBALANCING	57
5	D. TRANSPORTATION SERVICE REPORT	94

7 **A. REGULATORY CONTEXT AND BACKGROUND**

8 **1.0 Reference: REGULATORY CONTEXT AND BACKGROUND**

9 **FortisBC Energy Inc. (FEI) 2016 Rate Design Application dated**
10 **December 19, 2016 (2016 Application), Section 4.1, p. 4-1**

11 **Stakeholder Engagement**

12 On page 4-1 of the 2016 Application, FEI stated:

13 Prior to filing this Application, FEI conducted a stakeholder engagement process
14 consisting of information sessions, stakeholder workshops and a residential
15 customer online survey.

16 1.1 Please identify any stakeholder engagement activities undertaken in relation to the
17 current Application, and the rationale for the engagement approach.

18 1.1.1 Please provide the key issues and findings for each activity, any feedback
19 and/or concerns provided and how this feedback informed the current
20 Application.

21 1.1.2 Please discuss any differences between the engagement activities
22 undertaken in relation to the current Application as compared to the 2016
23 Application and the reasons for these differences.

24 **Response:**

25 FEI has not undertaken any stakeholder engagement activities in relation to this Application.

26 There are a number of key differences between the 2016 COSA and RDA and this current
27 Application which support FEI's different approach to engagement in this Application.

28 The 2016 COSA and RDA had many more proposed changes and customer impacts. FEI
29 proposed much more extensive rebalancing and, importantly, proposed changes to its rate design
30 and its General Terms and Conditions. Further, the 2016 COSA and RDA was the first to be
31 submitted by FEI since the amalgamation of FEI, FortisBC Energy (Vancouver Island) Inc. (FEVI)
32

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 2

1 and FortisBC Energy (Whistler) Inc. (FEW). FEI also undertook a separate COSA study for FEI
2 Fort Nelson and proposed adjustments to the Fort Nelson rate design (and therefore consultation
3 specific to the Fort Nelson service area was undertaken).

4 In contrast, the current Application contains no rate design changes or changes to FEI's General
5 Terms and Conditions. Further, the 2023 COSA study results demonstrate that FEI's existing
6 rates and rate designs are largely working as intended; as a result, FEI is only proposing minor
7 rate rebalancing for certain customer classes. As shown in Table 5-23 of the Application, the bill
8 impacts of the proposed rate rebalancing for the average residential and small commercial
9 customer are small at approximately 0.4 percent and 0.04 percent, respectively (while all other
10 rate schedules will either see no change in their rates or a small rate reduction).

11 FEI also considered the potential costs for undertaking stakeholder consultation and engagement
12 processes such as those referenced in the preamble to this IR and weighed those costs, which
13 would be borne by FEI's customers, against the relatively small impact to FEI's customers of the
14 proposed rate rebalancing in the Application. Based on the actual costs incurred by FEI on
15 consultation and engagement activities for the 2016 COSA and RDA of approximately \$200
16 thousand, FEI estimates that performing similar consultation and engagement activities for the
17 current Application would cost in the range of \$300 thousand to \$350 thousand when including
18 inflation and general cost increases. These costs do not include the significant internal costs for
19 FEI staff to plan, coordinate, prepare, present and participate in all of the activities.

20 Finally, this Application is being filed in response to the BCUC's directive to file an updated COSA
21 study within five years of the 2016 COSA and RDA Decision¹. The Application is not triggered by
22 a need, at this time, to propose rate design changes or other changes with significant impacts to
23 customers. Had FEI intended to bring forward an application with comprehensive rate design
24 changes or with changes that would result in significant impacts to customers, it would have
25 conducted stakeholder consultation and engagement in advance of filing the application.

26

¹ Order G-4-18, Directive 4.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 4

1 **B. FEI'S COSA METHODOLOGY**

2 **3.0 Reference: FEI'S COSA METHODOLOGY**

3 **Exhibit B-1, Section 4.2.1, Table 4-1, p. 20**

4 **FEI's 2023 test year revenue requirements**

5 On page 20 of the Application, FEI presents Table 4-1 which provides a summary of FEI's
 6 2023 test year revenue requirement with an earned return of \$370 million.

7 3.1 Please update Table 4-1 to account for any impact of the Generic Cost of Capital
 8 (GCOC) Stage 1 Decision on the 2023 test year revenue requirements.

9
 10 **Response:**

11 Please refer to Table 1 below for an updated version of Table 4-1 of the Application which shows
 12 the components of FEI's 2023 Approved revenue requirement pursuant to Order G-275-23
 13 (GCOC Compliance Filing), dated October 17, 2023, which includes the impact of the BCUC
 14 GCOC Stage 1 Decision and Order G-236-23.

15 As approved by Order G-275-23, approximately \$63.994 million of the 2023 revenue deficiency
 16 is deferred and captured in the non-rate base 2023 Revenue Deficiency deferral account. As
 17 such, there is no change to FEI's 2023 revenue requirement of \$2,249 million after the GCOC
 18 Stage 1 Decision.

19 **Table 1: Updated Table 4-1 – Summary of FEI's 2023 Test Year Revenue Requirements (\$ millions)**

Revenue Requirement Components	2023 Interim (G-352-22) As-Filed	2023 Approved (G-275-23) GCOC Compliance	Change	Reference FEI GCOC Compliance Filing (Appendix B-1)
Cost of Gas	1,171	1,171	-	Schedule 16, Line 13, Column 5
O&M Expense (Net)	292	292	-	Schedule 16, Line 18, Column 5

Amortization ⁽¹⁾	106	106	0.2	Schedule 21, Line 13, Column 3
Property Taxes	79	79	-	Schedule 16, Line 20, Column 5
Other Revenue	(42)	(42)	-	Schedule 16, Line 21, Column 5
Income Tax	52	73	22	Schedule 16, Line 25, Column 5
Earned Return	370	412	42	Schedule 16, Line 27, Column 5
Deferred 2023 Deficiency	-	(64)	(64)	Schedule 16, Line 22, Column 5
Total	2,249	2,249	-	

20
 21 **Note to Table:**

22 (1): Changes in amortization due to the inclusion of the 2023 Demand Side Management (DSM)
 23 Expenditures Plan Application Cost deferral account as a result of Decision and Order G-45-23, as well as
 24 changes in AFUDC rates resulting from the GCOC Decision.

25 However, for an evaluation of the full impact of the GCOC Decision on the 2023 COSA and the
 26 R:C ratios before the deferred deficiency, please refer to Table 2 below which provides the change

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 5

- 1 in the R:C ratio (before rate rebalancing) of each rate schedule due to the GCOC Decision under
 2 a scenario where the impact of the GCOC Decision on the 2023 deficiency is not deferred.
- 3 Please also refer to Table 3 below which shows the updated revenue shift and the estimated bill
 4 impact in percentage under the same proposed rate rebalancing option proposed in this
 5 Application. As shown in Table 3, the estimated bill impacts for the average residential and small
 6 commercial customer remain the same at 0.4 percent and 0.04 percent, respectively.
- 7 FEI will incorporate the GCOC Decision into the final COSA results and rate rebalancing as part
 8 of the Compliance Filing to the BCUC's decision on this Application.

9 **Table 2: 2023 COSA Results (Before Rebalancing) including GCOC Decision**

Rate Schedule	Initial COSA		Change
	Original App. R:C	GCOC Update R:C	
Rate Schedule 1 <i>Residential Service</i>	97.3%	97.2%	-0.1%
Rate Schedule 2 <i>Small Commercial Service</i>	98.0%	98.0%	0.0%
Rate Schedule 3/23 <i>Large Commercial Sales and Transportation</i>	104.0%	104.1%	0.2%
Rate Schedule 5/25 <i>General Firm Sales and Transportation</i>	106.9%	107.2%	0.3%

3

4

5

6 3.2 Please state whether the GCOC Stage 1 Decision and the resulting compliance

7 filing to set 2023 permanent rates would have any impact on the 2023 COSA and

8 Revenue-to-Cost (R:C) ratios. If yes, please provide any resulting updates to the

9 Application.

10

11 **Response:**

12 Please refer to the response to BCUC IR1 3.1.

13

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 7

1 **4.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.2.2, pp. 20 and 22**

3 **Key assumptions for test year revenues and costs**

4 On page 20 of the Application, FEI states:

5 Since the majority of FEI's gross [operation and maintenance] O&M is determined
6 using a formula and not developed on an activity view (O&M at the activity view is
7 only accounted for in actuals), FEI has split its 2023 gross O&M into an activity
8 view using percentages derived from its 2022 actual activity view O&M so that it
9 could be used for the purpose of allocating O&M expenses in the COSA model.

10 This approach is consistent with the 2016 COSA study, in which FEI's O&M was
11 also determined based on a formula under the 2014-2019 Performance Based
12 Ratemaking (PBR) Plan at that time. [Emphasis added]

13 4.1 Please indicate whether the BCUC has previously reviewed and/or approved the
14 2022 actual activity view O&M, which FEI is now using to split its 2023 gross O&M
15 into an activity view. If so, please provide the BCUC order and decision in which it
16 was approved.

17 4.1.1 If not, please state whether the BCUC approved the approach of using
18 the prior year actual activity view O&M for the purpose of allocating O&M
19 expenses in the COSA model when reviewing the 2016 COSA.

20
21 **Response:**

22 The 2022 actual activity view O&M was provided to the BCUC as part of FEI's 2022 Annual Report
23 (pages 20.3 to 20.5), submitted on April 28, 2023. FEI received a letter of acknowledgment from
24 the BCUC on October 17, 2023 indicating that BCUC staff had reviewed the 2022 Annual Report
25 and no further action is required. The activity view is simply a method of presenting the 2022
26 actual O&M at an activity-level of detail. FEI also provides its actual O&M results in a resource
27 view as part of its Annual Reports to the BCUC (e.g., see page 20.2 of the 2022 Annual Report).

28 The BCUC does not approve FEI's actual O&M spending under either the 2020-2024 MRP or
29 under the 2014-2019 PBR Plan. As explained on page 20 of the Application, the majority of FEI's
30 O&M is determined annually based on an approved indexed-based formula. Non-formula O&M
31 (i.e., forecast or flow-through O&M) is reviewed annually in the Annual Review rate-setting
32 process; however, it is the forecasts, not the actual results, that are approved as part of the Annual
33 Review process.

34 The treatment of O&M in the 2023 COSA study is consistent with the 2016 COSA study, i.e.,
35 using the prior year actual activity view O&M for the purposes of allocating O&M expenses in the
36 COSA model. While the BCUC did not specifically refer to FEI's method of allocating gross O&M
37 in Order G-4-18 and the accompanying Reasons for Decision, dated January 9, 2018, the BCUC
38 did state the following on page 11:

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 8

1 **Subject to the determinations on issues addressed in Section 4.3, the Panel**
2 **finds FEI’s COSA methodology generally follows standard practice, which**
3 **both EES Consulting and Elenchus view as being reasonable and acceptable**
4 **for setting just and reasonable rates.**

5 FEI considers the approach used in both the current 2023 COSA study and the 2016 COSA study
6 to be reasonable. Given the BCUC’s acceptance of the approach in the 2016 COSA and RDA
7 proceeding, FEI sees no basis for utilizing a different approach for the current COSA study.
8 Further, since the 2023 approved gross O&M is predominantly determined based on formula (with
9 some items being forecast), it is logical to use the 2022 actual activity view O&M results to split
10 the 2023 O&M into an activity view for the purposes of the COSA model.

11
12

13

14 4.2 Considering that the net O&M expenses are included in FEI’s 2023 test year
15 revenue requirements as shown in Table 4-1, please clarify why FEI is splitting its
16 2023 gross O&M expenses into an activity view rather than its 2023 net O&M
17 expenses.

18

19 **Response:**

20 It is important to note that there is no activity view of net O&M. The activity view of O&M is always
21 on a gross basis with a single line item that removes capitalized overheads. For clarity, FEI does
22 not remove capitalized overheads from each individual O&M activity view line item and it would
23 be inconsistent with past practice to do so. The line items in the O&M activity view sum to yield
24 gross O&M. The Overhead Capitalized credit, to go from the gross O&M to the net O&M, has its
25 own specific allocation to the various COSA functions based on the total allocated Gas Plant in
26 Service.

27 Additionally, to determine net O&M, biomethane O&M costs are reversed out as a single line item
28 and accounted for in the Biomethane Variance Account (BVA). This is because there is a separate
29 regulatory process for determining biomethane recoveries. Attempting to allocate the biomethane
30 credit to all O&M activity view line items would be inconsistent with past practice and illogical
31 because it would be impossible to track and see that biomethane O&M costs have in fact been
32 reversed out for the COSA study.

33 Further, splitting the 2023 net O&M using a 2022 actual activity view net O&M, which does not
34 exist, would result in incorrect amounts of 2023 biomethane costs being transferred to the BVA
35 and an incorrect 2023 capitalized overhead being used for allocation purposes in the COSA study.

36 Table 1 below demonstrates that if FEI split the 2023 net O&M using a 2022 actual activity view
37 net O&M, the biomethane costs transferred to the BVA would be \$4.289 million for allocation
38 purposes instead of the 2023 Approved amount of \$5.237 million, the capitalized overhead would

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 9

1 be \$55.043 million for allocation purposes instead of the 2023 Approved amount of \$56.744
 2 million, and the 2023 gross O&M would be \$351.998 million for allocation purposes instead of the
 3 2023 Approved amount of \$354.647 million. This would lead to an incorrect allocation of O&M in
 4 the COSA study, e.g., FEI would functionalize and allocate \$351.998 million as part of the 2023
 5 COSA rather than the approved amount of \$354.647 million.

6 **Table 1: Demonstration of the Error in Biomethane Costs Transferred to BVA and Capitalized**
 7 **Overhead if 2023 Net O&M is Split (instead of 2023 Gross O&M) using 2022 Actual O&M**

	2022 Actual O&M (\$000s)	2022 O&M %	2023 O&M Split Based on 2022 Actual % (\$000s)	2023 BCUC Approved O&M (\$000s)	Error introduced in 2023 O&M used for COSA Study (\$000s)
Gross O&M	\$341,030	120.3%	\$351,998	\$354,647	\$2,679
Biomethane transferred to BVA	(4,156)	-1.5%	(4,289)	(5,237)	(948)
Capitalized Overhead	(53,328)	-18.8%	(55,043)	(56,744)	(1,701)
Net O&M	\$283,546	100.0%	\$292,666	\$292,666	\$ -

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 10

1 **5.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.2.3, p. 26**

3 **Known and measurable changes to the test year revenues and costs**

4 5.1 Please explain how FEI calculated the 2025 rate base of \$165.603 million and the
5 cost of service of \$13.931 million related to the Inland Gas Upgrade Project
6 Certificate of Public Convenience and Necessity, as referenced on page 26 of the
7 Application.

8
9 **Response:**

10 As the components of the Inland Gas Upgrade (IGU) Project completed through to 2023 are
11 already included in FEI's rate base and rates, only the incremental impact from 2023 to 2025 due
12 to the remaining IGU Project components are known and measurable changes to the 2023
13 Approved revenue and costs.

14 As discussed in Section 4.2.3.2 of the Application, FEI already included approximately \$192.2
15 million in rate base from 2021 to 2023 (actuals for 2021 and 2022, forecast for 2023). At the time
16 of preparing the Application, the IGU Project was estimated to have a total capital cost of
17 approximately \$360 million and was expected to be complete with all remaining assets placed in-
18 service by the end of 2024; as such, approximately \$167.8 million of assets related to the IGU
19 Project were expected to enter rate base on January 1st of 2025. Please refer to Table 1 below
20 which provides a reconciliation of the estimated rate base of \$165.603 million (Line 19) as well as
21 the incremental cost of service of \$13.931 million (Line 28) in 2025.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 11

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 12

1
2 5.2 Please explain how FEI calculated the 2025 rate base of \$102.850 million and the
3 cost of service of \$8.334 million related to the Coastal Transmission System
4 Transmission Integrity Management Capabilities Project CPCN, as referenced on
5 page 26 of the Application.
6

7 **Response:**

8 While responding to this IR, FEI discovered a typographical error on Line 23 of page 26 of the
9 Application. As noted in Section 4.2.3.3 of the Application, FEI expects the CTS-TIMC Project to
10 be completed by the end of 2025 with all related assets expected to enter FEI's rate base on
11 January 1st of 2026, not 2025. As such, it is the calculated 2026 (not 2025) undepreciated mid-
12 year rate base amount of approximately \$102.850 million and the calculated cost of service
13 amount of approximately \$8.334 million added to the 2023 COSA as a known and measurable
14 change². FEI notes this does not change the amount added to the 2023 COSA and does not
15 change the COSA study results.

16 The 2026 rate base of \$102.850 million and the 2026 cost of service of \$8.334 million related to
17 the CTS-TIMC Project are calculated based on the information provided as part of the CTS-TIMC
18 CPCN Application, Confidential Appendix G-2, Financial Schedules Preferred Alternative. Table
19 1 below provides a reconciliation of the 2026 rate base amount of \$102.850 million, and Table 2
20 below provides a reconciliation of the 2026 cost of service impact of \$8.334 million. FEI notes that
21 the \$102.850 million does not include the \$13.271 million³ of capitalized development costs that
22 were already included in the 2023 revenue requirement and rates.⁴

² BCUC approved projects expected to be included in rate base by or soon after 2025.

³ \$13.877 million as forecast in the CTS-TIMC CPCN application financial schedules (Schedule 7, Line 8).

⁴ FEI Annual Review for 2023 Delivery Rates, Section 7.2.3.2.1, page 73, lines 23 to 25.

 9
 10 5.3 Please explain how FEI calculated the 2025 rate base of \$10.927 million and the
 11 cost of service of \$1.150 million related to the Gibsons Capacity Upgrade Project,
 12 as referenced on page 26 of the Application.

14 **Response:**

15 The 2025 rate base of \$10.927 million related to the Gibsons Capacity Upgrade (GCU) Project is
 16 calculated based on the estimated project capital cost of \$11.216 million⁵, which is expected to

⁵ As discussed in Section 7.2.3.2.2 of FEI's Annual Review for 2023 Delivery Rates, the total GCU project cost of \$12.194 million included approximately \$0.978 million of deferred costs, with the remaining \$11.216 million related to the project capital.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 15

- 1 complete in 2023, entering FEI's rate base on January 1, 2024⁶. Please refer to Table 1 below for
- 2 a reconciliation of the 2025 rate base amount of \$10.927 million.

⁶ As part of FEI's Annual Review for 2024 Delivery Rates (page 65), submitted on July 28, 2023, FEI forecast a total final capital cost of \$12.489 million, including AFUDC, which is included in the forecast 2024 rate base on January 1, 2024.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 17

1 While responding to this IR, FEI discovered an excel error in calculating the income tax expense
 2 in 2025 due to the GCU Project. The 2025 cost of service impact should be \$1.359 million, not
 3 \$1.150 million. This small error of \$209 thousand in the cost of service has no material impact
 4 (after rounding) on the 2023 COSA or the R:C ratios.

5 Please refer to Table 2 below which provides a reconciliation of the 2025 cost of service impact
 6 of \$1.359 million. The cost of service impact includes the following assumptions:

- 7 • Incremental O&M of approximately \$43 thousand per year;
- 8 • Incremental property tax of approximately \$13 thousand in 2025 related to the 1% in Lieu;
 9 and
- 10 • Return on rate base at 6.23 percent (Annual Review for 2023 Delivery Rates, Table 8-2)

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 18

1 **6.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.2, Table 4-3, Table 4-4, Table 4-6, Table 4-7, pp.**
3 **21, 24, 27**

4 **Final revenue requirements and rate base for 2023 COSA**

5 On page 27 of the Application, FEI states:

6 Tables 4-6 and 4-7 below provide the final revenue requirement and rate base,
7 respectively, that are used in the 2023 COSA for allocation, including all
8 adjustments related to the assumptions discussed in Section 4.2.2 and all known
9 and measurable changes discussed in Section 4.2.3.

10 On page 21 of the Application, FEI presents Table 4-3 and states:

11 Consistent with FEI's approach in past COSA studies, including the 2016 COSA
12 study, the revenues of bypass and large industrial contract customers are treated
13 as credits to the cost of service and allocated to each of FEI's non-bypass rate
14 schedules (RS) (i.e., sales and non-contract transportation service).

15 On page 24 of the Application, FEI states that Table 4-4 presents the 2023 forecast of RS
16 46 revenue as well as the cost of service of Tilbury 1A that is included in the 2023 COSA.

17 6.1 Considering that the sum of \$1.357 million (Table 4-3) and \$33.869 million (Table
18 4-4) is \$35.226 million, please clarify how FEI arrives at a total credit of \$47.3
19 million from Bypass, Contract Customers and RS46 in Table 4-6.

20
21 **Response:**

22 FEI clarifies that the \$47.3 million shown in Table 4-6 is the 2023 delivery margin forecast to be
23 recovered from Bypass, Contract Customers, and RS 46, not revenue which includes cost of gas.
24 The sum of \$1.357 million from Table 4-3 is revenue which includes cost of gas. Further, the
25 \$33.869 million from Table 4-4 is the deficiency from Tilbury 1A, not the delivery cost recovery
26 from RS 46 customers.

27 Please refer to Table 1 below for a reconciliation of the \$47.3 million shown in Table 4-6 of the
28 Application. FEI also clarifies and shows in Table 1 below that the \$47.3 million includes the 2023
29 Forecast delivery margin from RS 22 interruptible customers. As explained on page 25 of the
30 Application (lines 23 to 26), consistent with the 2016 COSA study, the delivery margin (and
31 revenue) from RS 22 interruptible customers is treated as credits to the cost of service and
32 allocated to each of FEI's non-bypass rate schedules.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 19

1 **Table 1: Reconciliation of the \$47.3 million of Delivery Margin Credit from Table 4-6 of the**
 2 **Application**

Rate Schedules	Reference	2023 Approved Delivery Margin (\$000s)
Bypass and Special Rates		
RS 22 - Firm Service	Appendix B, Schedule 19, Line 21	349
RS 25	Appendix B, Schedule 19, Line 22	388
RS 46	Appendix B, Schedule 19, Line 23	28,474
Byron Creek	Appendix B, Schedule 19, Line 24	134
VIGJV	Appendix B, Schedule 19, Line 26	4,896
Non-bypass		
RS 22 - Interruptible	See Note 1	15,784
RS 22 - Interruptible (Known and Measureable Changes)	See Note 2	(2,704)
Total		47,322

3
4 Notes to Table:

- 5 1) RS 22 – interruptible only; does not include interruptible delivery margin from RS 22A and RS 22B
 6 customers.
- 7 2) 10 fully interruptible RS 22 customers are reclassified to RS 22 – firm, which is equivalent to a shift in
 8 delivery margin of approximately \$2.704 million. As explained in Section 4.2.3.1, reclassifying existing
 9 interruptible demand to firm demand does not increase the overall revenue or cost of service in the
 10 2023 COSA model since the interruptible charge under RS 22 is set to equal the effective charges for
 11 firm demand (i.e., Firm Demand Charge per Month plus the Firm MTQ Delivery Charge per GJ).

12
13
14
15 6.2 Please explain how FEI calculates the \$36.5 million credit to the cost of gas from
 16 Bypass, Contract Customers and RS46, as shown in Table 4-6 above.

17
18 **Response:**

19 Please refer to Table 1 below which provides the reconciliation of the \$36.5 million credit related
 20 to the cost of gas from Bypass, Contract Customers and RS 46.

21 The cost of gas for RS 46 is recovered directly from the LNG sales customers, whereas the cost
 22 of gas for the bypass customers (i.e., RS 22 bypass and RS 25 bypass) and the transportation
 23 customers (i.e., RS 22 – interruptible) is related to their allocation of unaccounted-for (UAF) gas,
 24 which is gas that is not specifically accounted for in the balancing of receipts, deliveries, and
 25 operation use. The cost of UAF related to the bypass and transportation service customers is

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 20

1 included in the determination of their delivery rates to facilitate the recovery of UAF costs, as
 2 these customers do not pay for midstream charges.

3 **Table 1: Reconciliation of the \$36.5 million Cost of Gas Credit from Table 4-6 of the Application**

Rate Schedules	Reference	2023 Approved Cost of Gas (\$000s)
Bypass and Special Rates		
RS 22 - Firm Service	Appendix B, Schedule 18, Line 18, Column 3	450
RS 25	Appendix B, Schedule 18, Line 19, Column 3	36
RS 46	Appendix B, Schedule 18, Line 20, Column 3	35,585
Non-bypass		
RS 22 - Interruptible	See Note 1	446
RS 22 - Interruptible (Known and Measureable Changes)	See Note 2	(60)
Total		36,457

4

5 Notes to Table:

6 1) RS 22 – interruptible only; does not include interruptible cost of gas from RS 22A and RS 22B
 7 customers.

8 2) 10 fully interruptible RS 22 customers are reclassified to RS 22 – firm, which is equivalent to shifting cost
 9 of gas of approximately \$60 thousand. As explained in Section 4.2.3.1, reclassifying existing interruptible
 10 demand to firm demand does not increase the overall revenue or cost of service in the 2023 COSA
 11 model since the interruptible charge under RS 22 is set to equal the effective charges for firm demand
 12 (i.e., Firm Demand Charge per Month plus the Firm MTQ Delivery Charge per GJ).
 13
 14

15
 16 6.3 Please explain how FEI calculated that an amount of \$56.4 million (Table 4-7) of
 17 biomethane-related assets would be removed from its rate base.
 18

19 **Response:**

20 Please refer to Table 1 below for the reconciliation of the \$56.4 million of biomethane-related
 21 assets to be removed from rate base for the purposes of the 2023 COSA.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 22

1 **7.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.3.1.7, Table 4-8, p. 31; Order G-4-18 with**
3 **Reasons for Decision on FEI Cost of Service Allocation and**
4 **Revenue to Cost Ratios (FEI 2016 COSA Decision)**

5 **Functionalization summary**

6 7.1 For each of the following items included in Table 4-8 of the Application, please
7 confirm, or explain otherwise, that FEI's functionalization treatment in the 2023
8 COSA is consistent with the 2016 COSA and was approved by the BCUC in the
9 FEI 2016 COSA Decision:

- 10 • Gas supply operations costs
- 11 • Transmission assets and related costs
- 12 • Distribution assets and related costs
- 13 • Marketing costs
- 14 • Customer accounting costs

15

16 **Response:**

17 FEI confirms that for the functions listed in this IR, the treatment in the 2023 COSA is consistent
18 with the 2016 COSA that was approved by the BCUC in the FEI 2016 COSA Decision.

19

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 23

1 **8.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.3.2, p. 32**

3 **Classification**

4 On page 32 of the Application, FEI states:

5 As discussed in Section 4.3.1.2.2, the Tilbury 1A expansion has been in service
6 since 2018 for supporting the growing LNG sales demand both domestically and
7 internationally. The costs related to the Tilbury 1A expansion are functionalized
8 separately from the Tilbury Base Plant. Since the sales of LNG through RS 46 are
9 credited back to all non-bypass customers through the delivery rates of each rate
10 schedule, FEI is also allocating the related costs of the Tilbury 1A expansion based
11 on the delivery margin of each of these rate schedules in the 2023 COSA.

12 8.1 Please explain the method used by FEI to classify the Tilbury 1A expansion assets
13 and related costs (e.g., demand-related, energy-related, or customer-related).

14
15 **Response:**

16 As noted on page 32 of the Application and referenced in the preamble above, the Tilbury 1A
17 expansion is allocated based on the delivery margin of each rate schedule in the 2023 COSA,
18 thus matching the allocation of the RS 46 LNG sales revenue. Technically speaking, the Tilbury
19 1A expansion assets and related costs (as well as the offsetting RS 46 revenue) are neither
20 demand-related (e.g., peak demand), energy-related (e.g., volume), or customer-related (e.g.,
21 customer count). However, for the purposes of classification, and irrespective of the allocation
22 based on delivery margin, the Tilbury 1A expansion assets and related costs (as well as the
23 offsetting RS 46 revenue) are grouped as demand-related, which is reflected in Table 4-9 of the
24 Application.

25

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 24

1 **9.0 Reference: FEI'S COSA METHODOLOGY**
2 **Exhibit B-1, Section 4.3.2, p. 33**
3 **Minimum System Study (MSS)**

4 On page 33 of the Application, FEI states:

5 FEI uses the MSS approach with PLCC adjustment to determine the split between
6 the demand-related and customer-related classification for distribution related
7 costs.

8 In the Elenchus COSA Report on FEI's 2016 COSA study, Elenchus stated that
9 the use of MSS with a PLCC adjustment is an accepted method for classifying
10 distribution related assets and costs based on Elenchus' experience. [...] In the
11 2016 COSA Decision, the BCUC determined the method to be reasonable for use
12 in COSA studies.

13 [...]

14 The results of the MSS for the 2023 COSA are based on actual 2022 data, with
15 the customer-related component and the demand-related component each
16 approximately 50 percent.

17 9.1 Please describe any material difference between the results of the MSS in the
18 2016 COSA and in the 2023 COSA.

19
20 **Response:**

21 There is no change to the methodology between the 2016 and 2023 COSA studies used in the
22 minimum system study (MSS) to calculate the proportion of distribution costs that are customer-
23 related versus demand-related. The only changes in the MSS between the two COSA studies are
24 the underlying cost of steel and plastic pipe, the variations in total length of steel and plastic pipe
25 between 2016 and 2023, and the valuation of 60 mm pipe in FEI's minimum system as described
26 below. The 2023 MSS also included the Fort Nelson service area, as common rates were
27 implemented on January 1, 2023.⁷

28 In the 2016 MSS, FEI valued its minimum system based on 60 mm plastic (PE) pipe, whereas in
29 the 2023 MSS, the minimum system is now valued based on both 60 mm steel and 60 mm PE
30 pipe. As such, the average unit cost of 60 mm pipe in the 2023 MSS included the average unit
31 cost of 60 mm steel pipe and the average unit cost of 60 mm PE pipe. The implicit assumption of
32 only valuing the minimum system with 60 mm PE pipe in the 2016 MSS was that, at that time,
33 FEI considered that only PE pipe would be used if FEI had to build the minimum system again.
34 However, in reality, FEI has continued to utilize distribution steel pipe since the 2016 MSS, such
35 as for intermediate pressure (IP) distribution pipes. As such, in the 2023 MSS, FEI changed to

⁷ BCUC Decision and Order G-278-22.

1 use both the unit cost of 60 mm steel and PE pipes, which is more reasonable and reflective of
 2 current practice.

3 Table 1 below summarizes the results of the 2016 and 2023 MSS. One material change in terms
 4 of the underlying costs between the 2016 and 2023 MSS is the increase in the average unit cost
 5 of steel pipe relative to the increase in the average unit cost of PE pipe. The average unit cost of
 6 all steel pipes has increased by approximately 93 percent (Line 12) since 2016 compared to
 7 approximately 18 percent for PE pipe. This was expected given the significant inflationary
 8 increases, especially in the price of steel, in recent years when compared to 2016.

9 The change to using both average unit costs of steel and PE for 60 mm or less and the increase
 10 in steel prices are the main drivers that led to the change from the 30/70 percent split between
 11 customer-related and demand-related in the 2016 MSS to the 50 percent split in the 2023 MSS.

12 **Table 1: Comparison between 2023 MSS and 2016 MSS**

Line	Particular		Steel Only Mains	Plastic Only Mains	Combined Steel and Plastic	Notes
1		2023	11,629	15,233	26,862

19		Change	2,503,214	288,402	2,791,616	Line 17 - Line 18
20		% Change	386%	37%	197%	Line 19 / Line 18
21	Customer-Related	2023			50.0%	Line 17 / Line 5
22		2016			30.3%	Line 18 / Line 6
23	Demand-Related	2023			50.0%	1 - Line 21
24		2016			69.7%	1 - Line 22

13
 14 Note to Table:

15 (1) As discussed above, the 2016 MSS used the average unit cost of 60 mm or less PE pipe for the
 16 calculation of the minimum size cost (i.e., all pipe valued at 60 mm unit costs) for both steel and PE pipes.
 17 This has been changed to using the average unit cost of 60 mm or less steel pipe for steel and the average
 18 unit cost of 60 mm or less PE pipe for plastic, which is more reflective of FEI's current practice.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 26

1 **10.0 Reference: FEI'S COSA METHODOLOGY**
 2 **Exhibit B-1, Section 4.3.2, p. 34**
 3 **Peak Load Carrying Capability (PLCC) adjustment**

4 On page 34 of the Application, FEI states:

5 Based on a minimum distribution system of 60 mm PE in diameter, as discussed
 6 in the MSS section above, the PLCC adjustment for the 2023 COSA is calculated
 7 to be 0.206 GJ [gigajoules] per day per customer.

8 10.1 Please describe any material difference between the calculation of the PLCC
 9 adjustment in the 2016 COSA and in the 2023 COSA.

10
 11 **Response:**

12 There is no change to the methodology used to calculate the PLCC adjustment between the 2016
 13 and 2023 COSA studies. Table 1 below summarizes the PLCC results in 2016 and 2023. As
 14 demonstrated below, there is no material change between the two COSA studies, i.e., an increase
 15 of 0.001 GJ/day per customer, from 0.205 (2016) to 0.206 (2023).

16 **Table 1: Summary of PLCC Adjustment from 2016 COSA to 2023 COSA**

	Total Consumption GJ/day	Total Customers Served from Distribution Networks	PLCC Adjustment – Average GJ/day per Customer
2016	206,360	1,004,925	0.205
2023	225,161	1,092,907	0.206
Change	18,801	87,982	0.001

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 27

4 **Functionalization and classification summaries**

5 FEI summarizes the delivery cost of service functionalization in Table 4-8 and the delivery
 6 cost of service classification in Table 4-9.

7 11.1 Please revise Table 4-8 to include the delivery cost of service classification
 8 summary as contained in Table 4-9.

9
 10 **Response:**

11 Please see Table 1 below for a revised version of Table 4-8 which includes the classification of
 12 the delivery cost of service between energy, demand, and customer in the 2023 COSA study.

13 **Table 1: Breakdown of the 2023 COSA Delivery Cost of Service by Function and Classification**

Function	Classification	(\$ millions)	Percentage of Total
Gas Supply Operations	Energy	11.0	1.0%
	Demand	-	-
	Customer	-	-
Tilbury Base LNG Storage	Energy	-	-
	Demand	17.9	1.7%
	Customer	-	-
Tilbury Phase 1A Expansion	Energy	-	-
	Demand	33.9	3.2%
	Customer	-	-
Mt. Hayes LNG Storage	Energy	-	-
	Demand	7.0	0.7%
	Customer	-	-
Transmission	Energy	-	-
	Demand	266.6	25.3%
	Customer	-	-
Distribution	Energy	-	-
	Demand	196.0	18.6%
	Customer	403.4	38.3%
Marketing	Energy	41.6	3.9%
	Demand	0.0	0.0%
	Customer	38.3	3.6%
Customer Accounting	Energy	-	-
	Demand	-	-
	Customer	38.8	3.7%
Total		1,054.4	100.0%

1 **12.0 Reference: FEI'S COSA METHODOLOGY**
 2 **Exhibit B-1, Section 4.3.3, p. 35; Section 4.5, Table 4-16, p. 46**
 3 **Allocation**

4 On page 35 of the Application, FEI states:

5 Within the 2023 COSA, there is approximately \$52.6 million of costs that have
 6 been classified as energy-related. These costs include approximately \$11.0 million
 7 of gas supply operations related costs such as company use gas and gas control,
 8 as discussed in Section 4.3.1.1. The remaining \$41.6 million of costs are all related
 9 to the amortization of the [Demand Side Management] DSM deferral account in
 10 the 2023 test year.

11 On page 46 of the Application, FEI presents an extract of Table 4-16 below:

Table 4-16: Summary of Changes to COSA Study Methods from 2016

Application Section	Methodology Description	2016 COSA Method	2023 COSA Method	Comments
4.3.3	Allocation	Customer-related costs allocated based on average and weighted customers. Demand-related costs allocated to rate schedules based on coincident peak demand. Energy-related costs allocated based on sales volume.	No change from 2016 except that the costs of the Tilbury 1A expansion are classified as Energy-related and allocated based on the delivery cost of service of all non-bypass customers.	The RS 46 revenue associated with the Tilbury 1A expansion is an offsetting credit to all non-bypass customers, thus the associated costs should also be allocated to all non-bypass customers.

[Emphasis Added]

12
 13
 14
 15 12.1 If, within the 2023 COSA, there is approximately \$52.6 million of costs that have
 16 been classified as energy-related, and this includes \$11 million of costs related to
 17 gas supply operations and \$41.6 million related to the amortization of the DSM
 18 deferral account, please clarify why the costs of the Tilbury 1A expansion, which
 19 have also been classified as energy-related (per Line 4.3.3 in Table 4-16), are not
 20 included in the \$52.6 million amount of energy-related costs.

21
 22 **Response:**

23 The statement in Table 4-16 regarding the costs of the Tilbury 1A expansion being classified as
 24 Energy-related was a typographical error. The costs associated with the Tilbury 1A expansion are
 25 allocated based on the delivery margin of each rate schedule in the 2023 COSA and therefore
 26 the classification is neither demand-related nor energy-related.

27 As explained in the response to BCUC IR1 8.1, for the purpose of the classification, and
 28 irrespective of the allocation based on delivery margin, the Tilbury 1A expansion assets and
 29 related costs are grouped as demand-related and reflected in Table 4-9 of the Application. As
 30 such, the statement in Table 4-16 of the Application should have read "the costs of Tilbury 1A

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 29

1 expansion are classified as Demand-related and allocated based on the delivery cost of service
2 of all non-bypass customers”.

3
4

5
6 On line 4.3.3 of Table 4-16, FEI states that energy-related costs are allocated based on
7 sales volumes but also states that the costs of the Tilbury 1A expansion, which are
8 classified as Energy-related, are allocated based on the delivery cost of service of all non-
9 Bypass customers.

10 12.2 Please clarify why the Tilbury 1A expansion costs are not allocated based on sales
11 volumes. Please also clarify the basis on which these costs are allocated.

12

13 **Response:**

14 As discussed in the response to BCUC IR1 8.1, the Tilbury 1A expansion costs are allocated
15 based on the delivery margin of each non-bypass rate schedule which is consistent with the
16 treatment of the offsetting revenues from RS 46 LNG sales.

17 FEI notes that RS 46 was authorized by Direction No. 5 to the BCUC. RS 46 is a rate schedule
18 that is set separately from FEI’s delivery rates. Therefore, as part of FEI’s Annual Review process
19 that sets the revenue requirement and delivery rates, the revenue from RS 46 LNG sales is treated
20 as a credit to the delivery margin of all non-bypass customers. The result is that the credit is
21 allocated to each non-bypass rate schedule based on each rate schedule’s delivery margin.

22 Since delivery rates are set to recover the delivery margin of each rate schedule and include fixed
23 charges, variable volumetric charges, demand charges, etc., a rate schedule’s delivery margin is
24 not directly proportional to its sales volume. As such, if the Tilbury 1A expansion costs were
25 allocated based on sales volumes, there would be a misalignment between how the costs and
26 the revenues (RS 46) are allocated to each non-bypass rate schedule. Table 1 below provides a
27 comparison between sales volume and delivery margin in terms of the percentage breakdown by
28 rate schedule.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 30

1 **Table 1: Comparison of Percentage Allocation between Sales Volume and Delivery Margin**

Rate Schedule (Non-bypass)	Sales Volume (Table 4-10 of Application)		Delivery Margin (Table 4-14 of Application)	
	TJ	%	\$000s	%
1	82,890	41.7%	693.5	65.8%
2	29,204	14.7%	176.4	16.7%
3/23	29,674	14.9%	119.0	11.3%
4	166	0.1%	0.1	0.0%
5/25	19,130	9.6%	45.0	4.3%
6	21	0.0%	0.1	0.0%
7/27	10,293	5.2%	3.1	0.3%
22	12,373	6.2%	3.0	0.3%
22A	7,669	3.9%	8.5	0.8%
22B	7,481	3.8%	5.9	0.6%
Total	198,901	100.0%	1,054.4	100.0%

2

3 If the Tilbury 1A Expansion costs were allocated based on sales volume instead of delivery
 4 margin, then RS 1 will be allocated 41.7 percent of the Tilbury 1A Expansion costs while benefiting
 5 from approximately 65.8 percent of the offsetting revenue from RS 46. Allocating Tilbury 1A
 6 Expansion costs based on delivery margin ensures there is no misalignment in the allocation
 7 between the costs and the revenues related to LNG sales.

8

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 31

1 **13.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.3.3.2, pp. 36–37, Table 4-11, p.38**

3 **Demand-related allocation**

4 On page 36 of the Application, FEI states:

5 Consistent with FEI's 1993, 1996, 2001, 2012, and 2016 RDAs, FEI has used the
6 coincident peak (CP) approach to allocate demand-related costs to each rate
7 schedule. This reflects the fact that FEI's delivery system has generally been
8 constructed to meet the peak day (coldest day) demand of all its firm service
9 customers.

10 13.1 Please define coincident peak (CP) and non-coincident peak (NCP) and clarify
11 why the CP approach is superior to the non-coincident peak (NCP) to allocate
12 demand-related costs to each rate schedule.

13
14 **Response:**

15 The following descriptions/definitions are from Gas Rate Fundamentals, 4th Ed., American Gas
16 Association, 1987, Arlington, Virginia.

17 Coincident Demand (CP)

18 The CP method, also called peak responsibility, allocates capacity-related costs
19 based on the demands of the various classes of service at the time of the system
20 peak. The rationale for the CP method is that the utility's costs associated with its
21 maximum load should be divided among the customers causing that peak. The
22 magnitude of those customers' demands at other times of the day, month or year
23 or the length of those demands is not a consideration. Under this method, the
24 “allocator” for capacity costs is the ratio of the demand of the various classes of
25 service at the time of the system peak to the total demand at that time. (Page 141)

26 Non-coincident Demand (NCP)

27 This method, also called class demand, is based on the maximum demands of the
28 individual classes of service regardless of when those demands occur. Under the
29 NCP method, the effects of diversity are apportioned in equal proportions to each
30 class. Thus, the allocator for capacity costs is the ratio of each of the class
31 maximum demands to the sum of all the class maximum demands irrespective of
32 time of occurrence. (Page 143)

33 For FEI, the appropriate allocator to use for allocating demand-related (capacity-related) costs is
34 the CP method. This is because FEI's capacity infrastructure costs, such as the LNG storage
35 facilities (Tilbury Base Plant and Mt. Hayes), transmission and distribution system assets, and
36 their related costs are incurred to meet firm service peak demand requirements (i.e., they

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 32

1 ultimately determine the size and capacity of FEI's system), which occurs during winter and
2 corresponds with the coincident peak of FEI's system. If NCP is used to allocate demand-related
3 costs, then the costs would be allocated based on the individual peak that might or might not be
4 related to the costs incurred by FEI to meet the coincident system peak.

5

6

7

8

On page 37 of the Application, FEI states:

9

10

11

The CP of each rate schedule for allocation purposes is calculated based on a three-year weighted-average load factor (LF) and the annual volume of each rate schedule as follows:

12

CP (or Peak Day Demand) = Annual Consumption / (3-year w-avg. LF x 365 days)

13

14

15

16

17

18

19

The three-year weighted average LF is calculated based on the annual LF by region and by rate schedule using the number of customers per rate schedule in each region. Furthermore, the annual LF by region and by rate schedule is calculated based on an estimate of the peak day demand for each rate schedule on a regional basis using the regional temperature and a regression analysis that uses average monthly temperature and actual demand data for 10 months (excludes July and August).

20

[...]

21

22

23

Essentially, the sum of the heat sensitive rate schedules' peak day demand (i.e., RS 1, 2, 3, 23, 5, 25, and 6) and the firm contractual commitments (i.e., RS 22, 22A, and 22B) is equal to FEI's total peak day demand.

24

On page 38 of the Application, FEI presents Table 4-11.

25

26

27

13.2 Please provide the formula FEI uses to calculate the three-year weighted average load factor and provide a definition for load factor.

28

Response:

29

30

31

The load factor is a ratio of **Average Daily Weather Normalized Demand per Customer** divided by **Estimated Peak Daily Demand** and is intended to describe the utilization of the system at the region and rate class level.

32

$$\text{Load Factor} = \frac{\text{Average Daily Weather Normalized Demand per Customer}}{\text{Estimated Peak Daily Demand}}$$

33

34

The following example and explanation show how the Lower Mainland RS 1 (or Rate 1) load factor is calculated.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 33

1 **1. Calculation of the Average Daily Weather Normalized Demand per Customer**

	A	B	C	D
	Month	Days in Month	Monthly Weather Normalized Demand per Customer, GJ	Average Daily Weather Normalized Demand per Customer, GJ
1	Jan	31	14.9	0.48
2	Feb	28	12.4	0.44
3	Mar	31	11.1	0.36
4	Apr	30	7.5	0.25
5	May	31	4.7	0.15
6	Jun	30	3.0	0.10
7	Jul	31	2.8	0.09
8	Aug	31	2.9	0.09
9	Sep	30	2.9	0.10

11	Nov	30	9.9	0.33
12	Dec	31	15.0	0.48
13	Average Daily Weather Normalized Demand per Customer, GJ			0.26

2

3

- Columns A and B record the months and days in the month.

4

- Column C is the monthly weather normalized demand per customer recorded per month for the region and rate class.

5

6

- Column D is the average daily weather normalized demand per customer calculated as Column C divided by Column B.

7

8

- Row 13 is the simple average of column D and is the numerator in the load factor calculation.

9

1 **2. Calculation of Estimated Peak Daily Demand**

	A	B	C	D	E	F
	Month	Days in Month	Daily Average Temp. (C)	Monthly Actual Demand per Customer, GJ	Average Daily Actual Demand per Customer, GJ	
1	Jan	31	4.1	15.1	0.49	
2	Feb	28	4.4	12.3	0.44	
3	Mar	31	7.2	10.5	0.34	
4	Apr	30	8.0	9.1	0.30	
5	May	31	11.4	6.4	0.21	
6	Jun	30	15.6	3.3	0.11	
7	Sep	30	15.1	3.5	0.12	
8	Oct	31	9.7	8.1	0.26	
9	Nov	30	7.4	10.8	0.36	
10	Dec	31	0.9	17.1	0.55	
11					Design Temp, C	-9.40
12					Slope	-0.03
13					Intercept	0.58
14					Estimated Peak Daily Demand , GJ	0.87

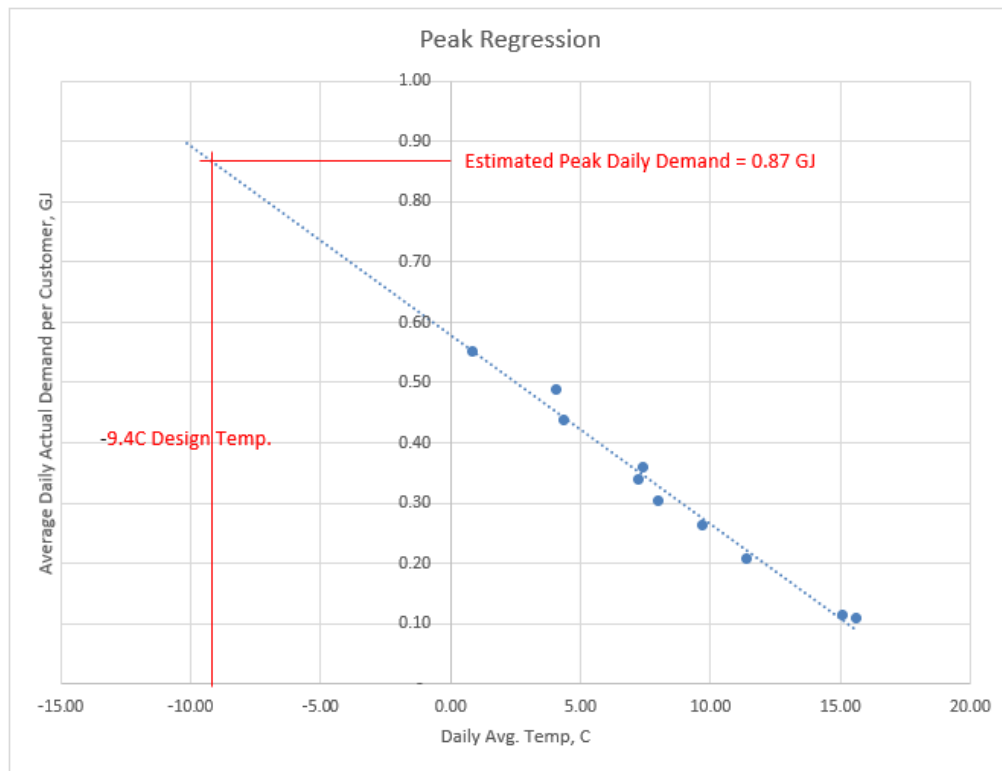

2

- 3
- Columns A and B record the months and days in the month.
- 4
- Column C is the daily average temperature for the month. This is the average of the set
- 5
- of average daily temperatures recorded in the month.
- 6
- Column D is the monthly actual demand per customer recorded per month for the region
- 7
- and rate class.
- 8
- Column E is the daily average actual demand per customer calculated as Column D
- 9
- divided by Column B.

10 The Estimated Peak Daily Demand is shown in row 14 and is calculated using a regression

11 between the Average Daily Actual Demand per Customer (column E) and the Daily Average

12 Temperature (column C). The regression is shown below:

1

2 The blue dots are from columns C and E of the table above. The regression line is extended to
 3 the Design Temperature (-9.4C for Lower Mainland).

4 **3. Calculation of Load Factor**

5 The load factor is then calculated as follows:

6

7
$$\text{Load Factor} = \frac{\text{Average Daily Weather Normalized Demand per Customer}}{\text{Estimated Peak Daily Demand}} = \frac{0.26}{0.87} = 0.29$$

8 The above calculation is repeated for each of the six regions⁸ to determine first the regional load
 9 factors for each rate schedule, which will then be weighted based on the number of customers by
 10 region for each rate schedule for a regional weighted load factor. FEI completes a regional based
 11 load factor to ensure the influence of different weather patterns, building stock and customer
 12 preferences in each region are accounted for.

⁸ The load factor calculation is weighted based on results from the following six regions: Lower Mainland, Inland, Columbia, Vancouver Island, Whistler and Fort Nelson.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 36

1 Once the regional weighted average load factor by rate schedule is calculated, the process is
 2 then repeated such that a three-year weighted average load factor by region can be calculated.
 3 Please refer to item 5) below for further discussion on why a three-year average is used.

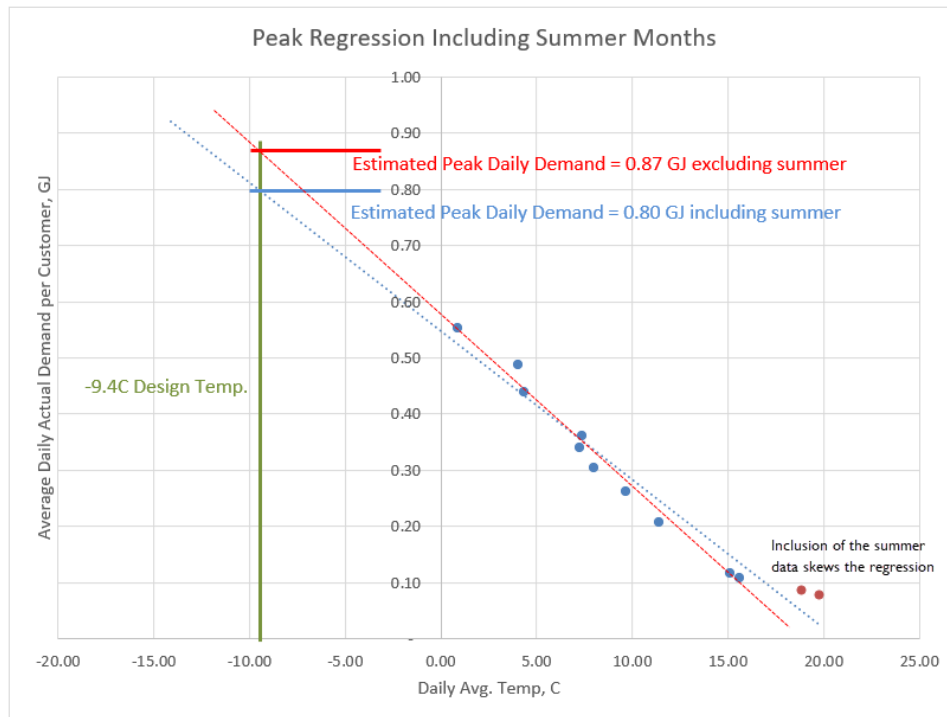

4 **4. Exclusion of Summer Months from Peak Estimate for RS 1/2/3/23/5/25**

5 The summer months (July and August) are omitted from the regression analysis for rate
 6 schedules 1, 2, 3, 23, 5 and 25 because the weather sensitive space heating load is not present
 7 in those months. If the summer months were included, the regression line would have a lower
 8 slope and underestimate the peak demand, which would over-estimate the load factor.

9 In the following figure, July and August data is shown as the two red dots in the bottom right
 10 corner of the plot.

11 The original regression line is shown in red, and at -9.4C results in an estimated peak of 0.87 GJ.
 12 When the summer months are included, the regression line flattens slightly and is shown as the
 13 blue dashed line. The resulting winter peak, which is under-estimated, is shown as the blue
 14 horizontal line at 0.80 GJ.

15 Including the summer data does not result in a reasonable estimate of the winter peak and
 16 therefore July and August data is not included in the regression analysis.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 37

1 **5. Rationalization of Three-Year Average**

2 FEI's use of a three-year average to develop the load factors is consistent with past practice, and
3 part of the methodology accepted by the BCUC in the 2016 COSA Decision. Using a three-year
4 average strikes a reasonable balance between smoothing out recent fluctuations and being
5 responsive to recent trends. Furthermore, it is preferable for the purposes of comparability and
6 consistency over time to continue to apply the existing method, which remains reasonable and
7 appropriate.

8
9

10

11 13.3 Please clarify how FEI addresses the circularity between the peak day demand
12 and the load factor, as the peak day demand is dependent on the load factor and
13 the load factor is based on an estimate of the peak day demand.

14

15 **Response:**

16 There is no circularity between the load factor and estimating the peak demand as used in the
17 COSA study. Please refer to the response to BCUC IR1 13.2 for the derivation of the load factors
18 for each rate schedule.

19 The peak day demand used to calculate the three-year weighted average load factor is the
20 “estimated peak daily demand” as set out in the response to BCUC IR1 13.2 and is calculated
21 based on the design day temperature with a linear regression between actual average daily
22 demand per customer and actual daily average temperature. This is different than the peak day
23 demand used to allocate demand-related costs, which is calculated based on the three-year
24 weighted average load factor and the 2023 forecast volume of each rate schedule.

25

26

27

28 13.4 Please revise Table 4-11 to include the annual consumption of each rate schedule
29 so that all the necessary data to calculate the peak day demand of each rate
30 schedule is included in Table 4-11.

31

32 **Response:**

33 Please refer to Table 1 below for a revised version of Table 4-11 with the annual volumes from
34 Table 4-10. The peak day demand equals to the annual volumes from Rate Schedules 1, 2, 3,
35 23, 5, 25 and 6 divided by the product of 365 days times the load factor⁹. FEI notes that the values
36 for Rate Schedules 22, 22A, and 22B are based on the firm demand of these customers and not

⁹ For example, RS 1 is 82,890 TJ / (365 days x 0.31276) = 726.1 TJ/day.

1 calculated based on the load factor. There is no peak day or firm demand for Rate Schedules 4,
 2 7 and 27 as these are seasonal customers or fully interruptible.

3 **Table 1: Annual Volume, Load Factors, and Peak Day/Firm Demand by Rate Schedule for**
 4 **Allocation**

Rate Schedule	Annual Volume (TJ)	Load Factor ⁽¹⁾	Peak Day or Firm Demand (TJ/Day)
1	82,890	31.3%	726.1
2	29,204	30.4%	263.3
3	25,770	36.0%	195.9
23	3,904	35.7%	30.0
4	166	n/a	-
5	10,827	53.6%	55.3
25	8,303	61.6%	37.0
6	21	100.0%	0.1
22	12,373	n/a	5.8
22A	7,669	n/a	24.7
22B	7,481	n/a	14.9
7	6,004	n/a	-
27	4,289	n/a	-
Total	198,901		1,353.0

5
 6 Note to Table:

7 (1) Rounded to one decimal place.

8
 9

10
 11 13.5 Please confirm, or explain otherwise, that FEI's CP is 1,353.0 TJ/day in Table 4-
 12 11 on the coldest day and that each rate schedule is allocated FEI's demand-
 13 related costs on the basis of their respective contribution to FEI's CP.

14
 15 **Response:**

16 Not confirmed.

17 The 1,353.0 TJ/day in Table 4-11 is simply the sum of CP peak day demand or firm demand of
 18 various rate schedules that will be allocated demand-related costs. It is for the purpose of each
 19 individual allocation and does not represent FEI's CP on the coldest day.

20 For clarity, the peak day demand shown for Rate Schedules 1, 2, 3, 23, 5, 25, and 6 represent
 21 the peak under extreme cold weather. For customers served under Rate Schedules 22, 22A and

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 39

1 22B, the values represent the sum of the firm contracted capacity of each customer in these rate
2 schedules.

3 The Peak Day/Firm Demands are used to allocate the demand-related costs functionalized in
4 Transmission and Mt. Hayes, while the Tilbury Base Plant is allocated only to core customers
5 (Rate Schedules 1, 2, 3/23, 5/25, and 6) based on their respective Peak Day Demand. Demand-
6 related costs under the Distribution Function are allocated based on the peak day demand of
7 each rate schedule (as shown in Table 4-11) minus the PLCC adjustment factor ($0.206 \times$ the
8 number of customers in the Rate Schedule).

9 FEI notes that Table 4-11 does not include the firm contract demand of each of the industrial
10 bypass customers, the contract customer VIGJV, or RS 46 LNG customers. As discussed in
11 Section 4.2.2.2, the revenue from these customers is treated as a credit to FEI's revenue
12 requirement and are not allocated with demand-related costs using the peak day/firm demand.

13

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 40

1 **14.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.3.3.3, p. 39**

3 **Customer-related allocation**

4 On page 39 of the Application, FEI states:

5 For the purposes of the 2023 COSA, FEI developed two types of weighting factors
6 for adjusting the average number of customers:

- 7 • a weighting factor for costs related to Meters and Distribution Services; and
8 • a weighting factor for costs related to Administration and Billing.

9 Table 4-13 below shows the weighting factors for meters/services and for
10 administration/billing, which are calculated for each rate schedule relative to the
11 residential rate schedule.⁷⁰

12 Footnote 70: FEI's residential rate schedule (RS 1) is used as the base upon which
13 to weight against other rate schedules because it is the least costly rate schedule
14 to connect and administer. For this reason, the weighting study shows the
15 residential rate schedule with a factor of 1.0. [*Emphasis added*]

16 14.1 Please provide the weighting study referenced in Footnote 70.

17
18 **Response:**

19 The weighting factor study referenced in Footnote 70 is referring to two weighting factor analyses,
20 the Customer Weighting Factor and the Customer Admin & Billing Factor, presented in Table 4-
21 13 of the Application.

22 The Customer Weighting Factor is used to adjust the number of customers when allocating the
23 costs associated with meters and services, whereas the Customer Admin & Billing Factor is used
24 to adjust the number of customers when allocating the costs related to customer administration
25 and customer billing. Please refer to Attachment 14.1A for the Customer Weighting Factor and
26 Attachment 14.1B for the Customer Admin & Billing Factor.

27 While responding to this IR, FEI noticed the Customer Weighting Factor for Rate Schedule 27
28 should be 38.5, not 48.7. This correction is reflected in Attachment 14.1A and does not affect the
29 2023 COSA study, allocated costs, or resulting R:C and M:C ratios.

30
31

32

33 14.2 Please describe any material difference between the 2016 COSA and the 2023
34 COSA as it relates to the number and type of weighting factors to adjust the
35 average number of customers.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023

Response:

There is no change to the type and number of customer weighting factors between the 2016 and 2023 COSA studies. In both COSA studies there is one customer weighting factor related to meters and services and another customer weighting factor related to customer administration and billing. The changes in the weighting factors between the rate schedules are primarily due to the relative increases in the underlying costs between residential customers and other customers between 2016 and 2023. For example, FEI had experienced larger inflationary increases in the industrial meters and service costs relative to the inflationary increase in residential meters and service costs, which resulted in a higher weighting factor for the industrial rate schedules since all weighting factors are relative to residential customers.

On page 40 of the Application, FEI states:

For example, industrial customers are installed with bigger rotary meters and service lines, while residential customers are installed with smaller diaphragm meters and service lines; therefore, the average cost (i.e., including meter, service line, regulators and customer service) for industrial customers under RS 5 (i.e., approximately \$29,545 per customer in 2022) is higher than the average cost for residential customers (i.e., approximately \$1,872 per customer in 2022).

14.3 Please list all the assets and related costs that are considered when calculating the customer weighting factor used for meters and services.

Response:

Please refer to Attachment 14.1A provided in the response to BCUC IR1 14.1 for the list of different meter types (including the component costs related to each meter type) as well as the related service lateral costs used to determine the Customer Weighting Factor.

14.4 Please explain how FEI determines the amount of “meter, service line, regulators and customer service” to include in the average cost to serve customers in each rate class. As an example, please explain how FEI arrived at an average cost of \$29,545 to serve industrial customers under RS 5 as it relates to meters and services.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 42

1 **Response:**

2 Please refer to Attachment 14.1A provided in the response to BCUC IR1 14.1 for the detailed
 3 calculations of the Customer Weighting Factor for each rate schedule.

4 The process for each rate schedule is the same, as follows:

- 5 1. For each rate schedule, the different types of meters as well as the number of meters for
 6 each meter type are identified based on available records.
- 7 2. For each meter type, the following are identified:
- 8 a. The cost of the meter;
- 9 b. The cost of the meter set excluding the meter itself (i.e., regulators, instrument
 10 drivers, piping that is added to the meter);
- 11 c. The cost for electronic volume correctors (EVC) for larger commercial / industrial
 12 meter sets and telemetry costs;
- 13 d. Customer service and the service lateral costs for each meter type;
- 14 e. For large industrial customers such as RS 22, the cost of any customer station that
 15 houses all metering equipment as well as a provision for the service lateral;
- 16 f. For large industrial customers to whom natural gas is supplied from FEI's high
 17 pressure pipeline, an engineering cost estimate is used to determine the customer
 18 station costs for reducing the pressure to a level that meets the customers'
 19 requirements; and
- 20 g. For the residential 200-series meter sets, for which approximately 85 percent are
 21 connected to a single service lateral while the remaining 15 percent are meters
 22 that share a single service lateral, Table 1 below illustrates how the total cost is
 23 calculated for these residential customers with a 200-series meter (also see
 24 Attachment 14.1A, page 1, Rate 1 – Residential, Line 2, Column m).

25 **Table 1: Calculation of Total Cost for Residential 200-Series Meter**

	Single Meters to a Service Lateral	Meters Sharing a Service Lateral	Total
Proportion of 200 series meters	85.18%	14.82%	100.00%
Number of Meters	759,201	132,076	891,201
Total Cost of Meter, Meter Set w/o Meter & Service Lateral	\$2,109 ¹⁰		
Total Cost of Meter, Meter Set w/o Meter		\$207 ¹¹	
Total Cost of 200-Series Meter & Lateral	\$1,601 million	\$27 million	\$1,628 million

¹⁰ Attachment 14.1A, page 1, Rate 1 – Residential, Line 2, Column i.

¹¹ Attachment 14.1A, page 1, Rate 1 – Residential, Line 2, Column b + Column c.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 43

1 For each rate schedule listed in Attachment 14.1A, the total cost for meters and services (Column
 2 m) is calculated and then divided by the number of meters (or stations for large industrial rate
 3 schedules) to determine the Class Per Unit Cost (Column n). The Class per Unit Cost is then
 4 divided by the Rate 1 Residential Class Per Unit Cost to determine the Customer Weighting Factor
 5 of each Rate Schedule (Column o).

6 Using RS 5 as an example, Table 2 below provides the calculation of the \$29,545 referenced in
 7 the preamble to this IR and the RS 5 Customer Weighting Factor of 15.8.

8 **Table 2: Rate Schedule 5 Class per Unit Cost and Customer Weighting Factor**

Line	Particulars	Amount	Reference
1	RS 5 Total Cost	\$7,740,748	Attachment 14.1A, Page 3, Line 18, Column m
2	RS 5 Number of Meters	262	Attachment 14.1A, Page 3, Line 18, Column l
3	RS 5 Class per Unit Cost	\$29,545	Line 1 / Line 2
4	RS 1 Class per Unit Cost	\$1,872	Attachment 14.1A, Page 1, Line 16, Column n
5	RS 5 Customer Weighting Factor	15.8	Line 3 / Line 4

9

10 Table 3 below provides the Total Cost, Total Number of Meters or Customers or Stations, the
 11 Average Class Per Unit Cost, and the Customer Weighting Factor for all rate schedules.

12 **Table 3: Summary of Customer Weighting Factor for all Rate Schedules**

Rate Schedule	Total Cost	No. of Meters or Customers	Average Class Per Unit Cost	Residential Class Per Unit Cost	Weighting Factor
1	\$1,755,256,795	937,401	\$1,872	\$1,872	1.0
2	\$374,606,805	95,013	\$3,943	\$1,872	2.1
3	\$102,336,308	6,017	\$17,008	\$1,872	9.1
4	\$1,154,718	40	\$28,868	\$1,872	15.4
5	\$7,740,748	262	\$29,545	\$1,872	15.8
6	361,181	10	\$36,118	\$1,872	19.3
7	\$1,276,028	14	\$91,145	\$1,872	48.7
22	\$4,213,351	23	\$183,189	\$1,872	97.8
22A	\$5,796,000	10	\$579,600	\$1,872	309.5
22B	\$6,269,000	5	\$1,253,800	\$1,872	669.6
23	\$37,182,175	1,696	\$21,923	\$1,872	11.7
25	\$20,212,484	520	\$38,870	\$1,872	20.8

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 44

1 **15.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.6.1, Table 4-17, pp. 43 and 47–48**

3 **2023 R:C ratios**

4 On page 43 of the Application, FEI states:

5 Transportation service customers do not pay FEI's commodity or storage and
6 transport charges.

7 On page 47 of the Application, FEI states:

8 For FEI's Transportation Service rate schedules that have companion sales rate
9 schedules (i.e., RS 23, RS 25, and RS 27 are companions to RS 3, RS 5 and RS
10 7, respectively), FEI imputes a cost of gas so that, when the R:C ratios are
11 calculated for these Transportation Service rate schedules, they are on the same
12 basis (i.e., delivery margin plus cost of gas) as for the sales rate schedules.⁷⁵

13 Footnote 75: Order G-42-91, dated May 23, 1991, page 3. RS 23, RS 25, and RS
14 27 are transportation options for RS 3, 5, and RS 7 respectively. Since the
15 allocated cost for RS 3, RS 5, and RS 7 includes cost of gas, a cost of gas is
16 imputed for RS 23, RS 25, and RS 27 to ensure consistency and to show the R:C
17 ratios on a combined basis for RS 3/23, RS 5/25, and RS 7/27. Without the imputed
18 cost of gas for these transportation rate schedules, the comparison would be
19 effectively between the [Margin-to-Cost] M:C ratios of the transportation rate
20 schedule and the R:C ratios of the sales rate schedule, which is not a
21 representative comparison.

22 On page 48 of the Application, FEI presents Table 4-17.

23 15.1 Considering that transportation service customers do not pay FEI's cost of gas,
24 please clarify what FEI means by "imputing a cost of gas" for the Transportation
25 Service rate schedules and describe the method used by FEI to impute this cost
26 of gas.

27
28 **Response:**

29 As indicated in the preamble, RS 3/23, RS 5/25 and RS 7/27 are companion rate schedules where
30 customers may switch¹² from Sales Service (purchasing gas from FEI) to Transportation Service
31 (purchasing market gas). These companion rate schedules have the same basic charges, delivery
32 charges and demand charges. As such, for the purposes of evaluating the performance of the
33 rates, particularly the delivery rates, for these rate schedules, a combined R:C ratio is used.

¹² Switching from Transportation Service to Sales Service is only possible if FEI is able to acquire gas and upstream resources on the behalf of the customer.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 45

1 To be able to present a combined R:C ratio, where the “R” in the R:C ratio includes gas costs,
 2 FEI must impute a cost of gas for RS 23, 25 and 27. As discussed on page 47 of the Application
 3 and referenced in the preamble above, without the imputed cost of gas for RS 23, 25, and 27, the
 4 comparison and evaluation would not be representative, as the transportation service rate
 5 schedules are being evaluated with the M:C ratios but have the same delivery rates as the sales
 6 service rate schedules which are being evaluated with the R:C ratios. Such a comparison would
 7 also be misleading for essentially the same group of customers, one with and one without cost of
 8 gas (i.e., RS 3 and 23, RS 5 and 25, and RS 7 and 27).

9 The imputed cost of gas for RS 23, 25, and 27 is calculated using the average cost of gas from
 10 the corresponding sales service RS 3, 5 and 7. Table 1 below provides the detailed calculations
 11 for the RS 23, 25, and 27 imputed cost of gas.

12 **Table 1: Calculation of Imputed Cost of Gas for RS 23, 25, and 27**

Line	Particulars	Amount	Reference
1	RS 3 Cost of Gas (\$000s)	\$ 185,898	
2	RS 3 Annual Sales Volume (TJ)	25,770

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 46

1
2 15.2 For Transportation Service rate schedules that do not have companion sales rate
3 schedules, such as RS 22A and RS 22, please confirm, or explain otherwise, that
4 the comparison is effectively between the M:C ratios of those transportation
5 service rate schedules and the R:C ratios of the sales rate schedules. Please also
6 explain whether this is a representative comparison.

7
8 **Response:**

9 Not confirmed.

10 Transportation service rate schedules do have a cost of gas component, which is related to their
11 unaccounted-for (UAF) gas which is recovered through their delivery rates.

12 The UAF cost of gas for transportation service rate schedules such as RS 22, 22A, and 22B is
13 set out in Appendix D, Line 3 of the Application, and also reflected in the financial schedules in
14 FEI's Annual Review for 2023 Delivery Rates proceeding¹³. It would be inconsistent if the UAF of
15 transportation service rate schedules are ignored and only evaluated based on their M:C ratios
16 while sales service rate schedules are evaluated using the R:C ratios that include their cost of
17 gas. FEI acknowledges that the UAF cost of gas is quite small in these transportation service rate
18 schedules, resulting in an R:C ratio that is very close to the M:C ratio.

19 FEI notes that the primary purpose of the R:C ratios is to serve as a guide as to whether rate
20 design or rebalancing is needed, while the M:C ratios provide additional information. The primary
21 purpose of the R:C ratios is not for comparing against other rate schedules. Evaluating RS 22,
22 22A, and 22B using M:C ratios would have resulted in the same conclusion, i.e., revenue
23 rebalancing should occur for RS 22 in order to bring the R:C ratio or M:C ratio within the range of
24 reasonableness.

25

¹³ Evidentiary Update to FEI Annual Review for 2023 Delivery Rates dated October 24, 2022, Appendix B, Schedule 18, Lines 13-19.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 47

1 **16.0 Reference: FEI'S COSA METHODOLOGY**
2 **Exhibit B-1, Section 4.6.1, p. 48**
3 **2023 R:C ratios for RS 4 and RS 7/27**

4 On page 48 of the Application, FEI states:

5 FEI has excluded RS 4 and RS 7/27 from Table 4-17 above because RS 4 is a
6 seasonal service (firm in the summer and interruptible in the winter) and RS 7/27
7 is a fully interruptible service. These rates do not drive system capacity additions,
8 and consequently are not allocated any demand-related costs. The charges within
9 these rate schedules are not set using their allocated costs from the 2023 COSA.
10 Instead, the charges for these rate schedules are set based on a discount to the
11 charges of RS 5/25, FEI's General Firm Service rate schedule. Nevertheless, FEI
12 has calculated the ratios for these rate schedules, which are set out in Table 4-18
13 below. [footnote omitted]

14 16.1 Please clarify why FEI's energy-related costs and customer-related costs are not
15 allocated to RS 4 and RS 7/27 in accordance with the allocators presented in Table
16 4-10 (annual volume), Table 4-12 (number of customers) and Table 4-13 (weighted
17 number of customers).
18

19 **Response:**

20 FEI notes that the quoted paragraph in the preamble above from page 48 of the Application did
21 not state that RS 4 and RS 7/27 are not allocated energy-related and customer-related costs. The
22 quoted paragraph only highlights that RS 4 and RS 7/27 are not allocated demand-related costs.
23 These rate schedules are either seasonal and winter interruptible or fully interruptible; therefore,
24 they do not contribute to peak demand, which occurs in the winter. Please refer to Schedules 4
25 and 5 of Appendix D of the Application which show that energy-related and customer-related
26 costs are allocated to RS 4 and RS 7/27.

27 The quoted paragraph is highlighting the fact that the rates for RS 4 and RS 7/27 are not set using
28 their allocated costs from the COSA study. Instead, the rates for these rate schedules are set
29 based on a discount to the rates of RS 5/25. As such, the R:C and M:C ratios for RS 4 and RS
30 7/27 are not included in Table 4-17 with the R:C and M:C ratios of other rate schedules (those
31 with their rates set based on their allocated costs).

32 FEI notes that the demand-related costs shown in Schedules 4 and 5 of Appendix D for RS 4 and
33 RS 7/27 are related to Tilbury 1A expansion costs. As discussed in the response to BCUC IR1
34 8.1, the Tilbury 1A expansion costs are allocated using the delivery margin cost of service but are
35 grouped with the demand-related costs for presentation purposes.

36 Also, for clarity, Table 4-13 does not show the weighted number of customers as this IR suggests.
37 Table 4-13 shows the weights (or weighting factor) that would be applied to the number of

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 48

- 1 customers. The weighted number of customers is equal to the number of customers multiplied by
- 2 the weighting factors.
- 3

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 49

1 **17.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Section 4.6.1, pp. 48–49, Tables 4-17 and 4-18; FEI 2016**
3 **COSA Decision, p. 25**

4 **2023 R:C and M:C ratios**

5 On pages 48 to 49 of the Application, FEI presents Table 4-17 and Table 4-18 which
6 shows the R:C and M:C ratio results before rebalancing.

7 On page 25 of the FEI 2016 COSA Decision, the BCUC stated:

8 [...] FEI has already been using a range of reasonableness for its R:C ratio, but an
9 equivalent range has not been determined for the M:C ratio. Since the M:C ratio
10 would be applied in an equivalent manner once an appropriate range of
11 reasonableness has been calculated, the Panel considers that consistency with
12 past practice is appropriate. The Panel places weight on Elenchus' view that the
13 most important consideration in choosing an approach is consistency and that the
14 same ratio and the same range should be used as the primary reference point on
15 an on-going basis. While consistency is an important factor in the Panel's decision,
16 it does not preclude the Commission from considering alternatives to the R:C ratio
17 in future applications.

18 17.1 Please discuss the pros and cons of using the M:C ratio to inform FEI's revenue
19 rebalancing proposals and the impact this ratio may have on the appropriate range
20 of reasonableness.

21
22 **Response:**

23 FEI's decision to use the R:C ratios as opposed to the M:C ratios to inform its revenue rebalancing
24 proposals was guided by the BCUC's determination and findings on page 25 of the Reasons for
25 Decision attached to Order G-4-18 (2016 COSA Decision). In that decision, the Panel found that
26 "the R:C ratio should be used to inform rate design and rate rebalancing proposals". Further, while
27 the Panel directed FEI to present both the R:C and M:C ratios for each rate schedule in the next
28 COSA study filing, the Panel also stated: "While the R:C ratios will inform rate design and rate
29 balancing, the M:C ratios will provide useful context for stakeholders."

30 The pros and cons of using R:C and/or M:C ratios to guide rate design and revenue rebalancing
31 were discussed extensively as part of the 2016 COSA and RDA and were detailed in the 2016
32 COSA Decision. The considerations are as follows:¹⁴

- 33 1. Jurisdictional use;
34 2. Intervener preference;
35 3. Exclusion of flow-through costs; and

¹⁴ Page 25 of 2016 COSA Decision.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 50

1 4. Consistency of applying a method.

2 **1. Jurisdictional Use**

3 As part of Elenchus' jurisdictional review, it showed that of the six Canadian gas utilities surveyed,
4 three used R:C ratios while the other three used M:C ratios.

5 **2. Intervener Preference**

6 In the 2016 COSA and RDA proceeding, two interveners stated a preference for the R:C ratios
7 while two preferred the M:C ratios.

8 **3. Exclusion of Flow-through Costs**

9 As part of Elenchus' review of FEI's 2016 COSA study, Elenchus concluded that the "M:C ratio
10 has merit as a primary reference since it excludes flow-through costs", i.e., gas costs are not
11 being rebalanced and only the revenues less gas costs will recover the cost of service margin.

12 However, it is important to note that, assuming all things being equal, the equivalent range of
13 reasonableness for the M:C ratios would need to be wider than the range of reasonableness set
14 for the R:C ratios. The BCUC included this point in the 2016 COSA Decision (page 24):

15 Elenchus elaborated that for the range of reasonableness of the R:C ratio to be
16 applied in a manner equivalent to a range of reasonableness for the M:C ratio, the
17 R:C ratio range would have to be narrower than the equivalent M:C ratio range.

18 Table 1 below provides an illustrative example of this point. As Table 1 shows, depending on the
19 portion of cost of gas relative to the total cost of service, the equivalent range of reasonableness
20 for the M:C ratios will have to be wider than the accepted range of 95 percent to 105 percent for
21 R:C ratios. Given the cost of gas portion of FEI's total cost of service varies year-over-year, the
22 advantage of using the R:C ratios is that it avoids the need to vary the range of reasonableness
23 depending on the portion of cost of gas relative to the total cost of service, i.e., the range of
24 reasonableness for R:C ratios would not change regardless of the proportion of gas costs over
25 the total cost of service.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 52

1 **4. Consistency of Method**

2 In the 2016 COSA Decision (page 24), the BCUC noted the following:

3 Elenchus stated that one measure should be considered to be the primary basis
4 for determining when rate rebalancing is to be considered and the second
5 measure, if used, would be considered for informational purposes only.

6 The BCUC then stated the following as part of its determination (page 25):

7 The Panel places weight on Elenchus' view that that the most important
8 consideration in choosing an approach is consistency and that the same ratio and
9 the same range should be used as the primary reference point on an on-going
10 basis.

11 Continuing to use the R:C ratios to inform FEI's rate design and rebalancing proposals is therefore
12 preferable because it is consistent with previous applications, including the 2016 COSA and RDA.

13
14

15

16 17.2 Please explain whether FEI used the M:C ratios in any way to inform the revenue
17 rebalancing proposals in the Application and if so, how. If not, why not.

18

19 **Response:**

20 FEI did not use the M:C ratios to inform the revenue rebalancing proposals for the reasons
21 explained in the response to BCUC IR1 17.1.

22
23

24

25 17.3 Please discuss the impact on FEI's revenue rebalancing proposals put forward in
26 the Application if M:C ratios were used to inform rate design and revenue
27 rebalancing, and whether this would change FEI's statement that "The 2023 COSA
28 results demonstrate that a comprehensive redesign of FEI's existing rates is not
29 warranted at this time."

30

31 **Response:**

32 If the BCUC directed or ordered FEI to use the M:C ratios to guide and inform revenue
33 rebalancing, the 2023 COSA results would still demonstrate that a comprehensive redesign of
34 FEI's existing rates is not warranted at this time.

35 As discussed in the response to BCUC IR1 17.1, the equivalent range of reasonableness for the
36 M:C ratios would need to be wider than the range of reasonableness set for the R:C ratios. Based

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 53

1 on the 2023 COSA study, the total cost of gas is close to 55 percent of the total allocated cost of
 2 service.¹⁵ Based on the illustrative example shown in Table 1 in the response to BCUC IR1 17.1,
 3 the range of reasonableness for the M:C ratios would be 89 percent to 111 percent in order to be
 4 equivalent to the 95 percent to 105 percent range of reasonableness for the R:C ratios.

5 Based on an M:C ratio range of reasonableness of 89 percent to 111 percent, Table 1 below
 6 (which is a copy of Table 4-17 from the Application) shows that only RS 3/23 and RS 5/25 would
 7 be outside of the upper bound of the range of reasonableness, with RS 3/23 only outside by 0.2
 8 percent. All other rate schedules would remain within the range of reasonableness. As such, if
 9 FEI were to use the M:C ratios to guide and inform revenue rebalancing, the 2023 COSA results
 10 would still demonstrate that a comprehensive redesign of FEI’s existing rates is not warranted at
 11 this time.

12 **Table 1: R:C and M:C Ratio Results before Rebalancing**

Rate Schedule	R:C	M:C
Rate Schedule 1 <i>Residential Service</i>	97.3%	95.0%
Rate Schedule 2 <i>Small Commercial Service</i>	98.0%	95.6%
Rate Schedule 3/23 <i>Large Commercial Sales and Transportation Service</i>	104.0%	111.2%
Rate Schedule 5/25 <i>General Firm Sales and Transportation Service</i>	106.9%	126.9%
Rate Schedule 6 <i>Natural Gas Vehicle Service</i>	96.2%	91.0%
Rate Schedule 22 <i>Large Volume Transportation Service</i>	110.0%	110.2%
Rate Schedule 22A Transportation Service (Closed) Inland Service Area	101.8%	101.9%
Rate Schedule 22B Transportation Service (Closed) Columbia Service Area	100.1%	100.1%

13

14

15

16

17 Page 25 of the FEI 2016 COSA Decision also stated:

18 [...] ICG submits that flow-through cost items should be excluded since they do not
 19 reflect the cost of serving a customer [...] and cites Elenchus statement that “The

¹⁵ Appendix D, Schedule 1, Line 8: Total Cost of Gas (incl. imputed amount for RS 23, 25, and 27) is \$1.247 million, while the total utility allocated cost of service is \$2.301 million (Schedule 1, Line 9). \$1.247 million / \$2.301 million = 54.2%.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 54

1 advantage of that, as pointed out in the report, is one, the margin – the pass-
2 throughs vary across different classes. So using an M:C ratio for all the classes as
3 the primary measure, in a sense, makes more sense when you're comparing
4 classes.

5 17.4 Please explain the significance of being able to compare classes when addressing
6 revenue rebalancing.

7
8 **Response:**

9 If the results of the COSA study indicate that one or more classes of customers' revenue
10 responsibility should be decreased, then the next step is to examine what other class(es) should
11 have their revenue responsibility increased such that the total revenues to the utility remain
12 unchanged. This requires being able to compare the various classes as to whether they could
13 bear some, or all, of the revenue shift. Consideration should go beyond the R:C ratios as there
14 may be other economic factors that impact a certain customer group's ability to absorb some, or
15 all, of the revenue shift.

16 FEI notes that since the 1993 Phase B rate design, the shift of revenue responsibility has been to
17 the residential customer class because it consistently has the lowest R:C ratio. The residential
18 customer class also has the most customers and revenue base to absorb revenue shifts. Even if
19 another class of customer is now shown to have an R:C ratio below 100 percent, due to its
20 relatively small size (e.g., RS 6), the majority of the revenue shift would still need to be made to
21 the residential rate class.

22
23

24
25 17.5 Given that pass-through costs vary across different classes, please explain the
26 rationale for using R:C ratios to determine the revenue rebalancing proposals put
27 forward in the Application.

28
29 **Response:**

30 FEI used the R:C ratios to inform its revenue rebalancing proposals for the reasons described in
31 the response to BCUC IR1 17.1. The rebalancing being put forward by FEI has no impact on the
32 cost of gas, as the proposals in this Application only impact the delivery margin.

33

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 55

1 **18.0 Reference: FEI'S COSA METHODOLOGY**

2 **Exhibit B-1, Appendix E, Table 4, pp. 4–6**

3 **MSS and PLCC study results**

4 On page 4 of Appendix E to the Application, FEI states:

5 The capacities of the minimum sized distribution systems are then divided by the
6 number of customers served by each distribution system and an average minimum
7 system capacity per customer (the PLCC Adjustment) is calculated. This PLCC
8 Adjustment is then multiplied by the number of customers in each rate class, and
9 the corresponding amount is subtracted from the peak demand for that rate class
10 to get the PLCC adjusted peak demand. This PLCC adjusted peak demand is then
11 used to allocate the demand related costs for the Distribution function. [*Emphasis*
12 *added*]

13 18.1 Please confirm, or explain otherwise, that the capacities of the minimum-sized
14 distribution systems are shown in the 6th column of Table 4 on p. 6 of Appendix E,
15 under the header “total consumption (GJ/d).”

16
17 **Response:**

18 Confirmed.

19
20

21
22 18.2 Please clarify how the variables “design degree day,” “heating value (MJ/m³),” and
23 “load for PLCC (m³/h)” enter into the calculation of the PLCC adjustment.

24
25 **Response:**

26 For each distribution network, FEI establishes a Design Degree Day based on historical weather
27 data that represents a 1-in-20 years extreme cold weather event. Distribution systems are
28 designed to meet the peak hour load that is expected to occur on the Design Degree Day. If all
29 distribution mains were 60 mm pipe, there is a load capacity that is associated with it. For
30 example, in the case of 100 Mile – Clinton, that capacity is 3,458 cubic meters / hour in the column
31 titled “Load for PLCC m³/hr”.

32 Associated with each distribution network is an average heat content of gas. For 100 Mile –
33 Clinton it is 39.132 MJ per cubic meter. To convert the capacity from cubic meters per hour to GJ
34 per day, the following formula is used for each network:

35 Load for PLCC m³/hr. x Heating value MJ/m³ x 24 hours / 1000 = Total Consumption
36 GJ/d

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 56

1 The "Total Consumption GJ/d" for all distribution networks divided by the total number of
 2 customers equals the PLCC adjustment, i.e., Average GJ per day per Customer.

3
 4

5

6 18.3 Please revise Table 4-11 to include the PLCC adjustment, as described in the
 7 underlined portion of the preamble. Please also include in the revised table the
 8 PLCC adjusted peak demand by rate schedule.

9

10 **Response:**

11 Table 1 below provides the requested revised version of Table 4-11 of the Application. Customers
 12 in RS 4 and 7/27 have zero firm demand.

13

Table 1: PLCC Adjusted Peak Demand by Rate Schedule

Rate Schedule	Load Factor	Peak Day or Firm Demand (TJ/Day)	Number of Customers	PLCC Adjustment	PLCC Adjusted Peak Demand (For Distribution Function) (TJ/Day)

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 57

1 **C. REVENUE REBALANCING**

2 **19.0 Reference: REVENUE REBALANCING**

3 **Exhibit B-1, Section 1, p. 2, Section 5.3, Tables 5-4, 5-7, 5-10, 5-14, 5-**
4 **15 and 5-18, pp. 62, 65, 68, 72–73 and 76, Section 5.3.6, Tables 5-21**
5 **and 5-22, p. 79, Section 5.4, Table 5-23, p. 83**

6 **Revenue Rebalancing Options**

7 19.1 Please explain whether FEI considered the revenue rebalancing option of using
8 RS 2 with adjustments for maintaining economic crossover between RS 2 and RS
9 3/23 only.

10 19.1.1 Please provide an assessment of this revenue rebalancing option against
11 Bonbright's rate design principles, similar to that provided for revenue
12 rebalancing options 1 to 5 in Section 5.3 of the Application.

13 19.1.2 In a similar format to Table 5-15 in the Application, please provide a table
14 showing the economic crossover volume between RS 2 and RS 3/23 of
15 2,000 GJ that will be maintained under this revenue rebalancing option.

16 19.1.3 In a similar format to Table 5-18 in the Application, please provide a table
17 showing the rate changes to each affected rate schedule under this
18 revenue rebalancing option. Please specify assumptions used.

19 19.1.4 Please expand Tables 5-21 and 5-22 to include this revenue rebalancing
20 option, while excluding Option 1 (Status Quo). Please specify
21 assumptions used.

22
23 **Response:**

24 FEI did not consider using RS 2 for revenue rebalancing with adjustments for maintaining the
25 economic crossover between RS 2 and RS 3/23 only (i.e., the option proposed in this IR). As
26 explained on page 75 of the Application, FEI's proposed rebalancing Option 5 was developed
27 based on the results observed from Options 1 to 4. One of the learnings from Option 4 was that
28 if RS 2 is used to absorb the revenue rebalancing from RS 5/25 and RS 22, there will be no bill
29 impact to RS 1 customers, but RS 2 customers will experience the highest bill impact out of all
30 options explored. In contrast, the proposed Option 5, which is to use RS 1 to absorb the revenue
31 rebalancing while adjusting RS 2 to maintain the economic crossover between RS 2 and RS 3/23,
32 will result in a better balance between RS 1 and RS 2 customers, with both seeing only small bill
33 impacts (i.e., 0.4 percent and 0.04 percent, respectively).

34 However, FEI provides an assessment of this option below using the same approach as the
35 options assessed in Section 5.3 of the Application.

36 Tables 1 and 2 below provide a similar view as Tables 5-17 and 5-18 of the Application based on
37 the option requested in this IR (using RS 2 for revenue rebalancing with adjustments for the

1 maintaining economic crossover between RS 2 and RS 3/23). As demonstrated below, there will
 2 be no impact to RS 1 customers under this option; however, the bill impact for RS 2 customers
 3 will become 1.21 percent, which is the highest out of all options explored. For the average RS 2
 4 customer with 322 GJ of consumption annually, this is equivalent to an annual bill impact of
 5 approximately \$52.

6 **Table 1: 2023 COSA R:C and M:C Results after Revenue Rebalancing (Using RS 2 for Revenue**
 7 **Rebalancing and Maintaining Economic Crossover between RS 2 and RS 3/23)**

Rate Schedule	Initial COSA		Revenue Shift (\$000s)	Approx. Annual Bill Impact (%)	COSA after Rebalancing	
	R:C	M:C			R:C	M:C

1 **Table 2: Summary of Rate Changes (Using RS 2 for Revenue Rebalancing and Maintaining**
 2 **Economic Crossover between RS 2 and RS 3/23)**

Rate Schedule	Current 2023		Option (BCUC IR1 19.1)
	Approved Rates	Changes	
RS 1 - Residential			
Basic Charge (\$/Day)	\$ 0.4085	\$ -	\$ 0.4085
Delivery Charge (\$/GJ)	\$ 6.010	\$ -	\$ 6.010
RS 2 - Small Commercial			
Basic Charge (\$/Day)	\$ 0.9485	\$ 0.3658	\$ 1.3143
Delivery Charge (\$/GJ)	\$ 4.568	\$ (0.255)	\$ 4.313
RS 3/23 Large Commercial			
Basic Charge (\$/Day)	\$ 4.7895	\$ 0.4730	\$ 5.2625
Delivery Charge (\$/GJ)	\$ 3.893	\$ (0.050)	\$ 3.843
RS 4 - Seasonal			
Basic Charge (\$/Month)	\$ 14.4230	\$ -	\$ 14.4230
Delivery Charge - Off-Peak (\$/GJ)	\$ 1.904	\$ (0.309)	\$ 1.595
Delivery Charge - Extended (\$/GJ)	\$ 2.549	\$ (0.069)	\$ 2.480
RS 5/25 - General Firm Service			
Basic Charge (\$/Month)	\$ 469.0000	\$ -	\$ 469.0000
Delivery Charge (\$/GJ)	\$ 1.085	\$ (0.071)	\$ 1.014
Demand Charge (\$/GJ/Month)	\$ 30.278	\$ (1.989)	\$ 28.2890
RS 7/27 - General Interruptible Service			
Basic Charge (\$/Month)	\$ 880.0000	\$ -	\$ 880.0000
Delivery Charge (\$/GJ)	\$ 1.748	\$ (0.095)	\$ 1.653
RS 22 - Large Volume Transportation			
Basic Charge (\$/Month)	\$ 3,664.0000	\$ -	\$ 3,664.0000
Firm Demand Charge (\$/GJ/Month)	\$ 32.199	\$ (0.505)	\$ 31.694
Firm MTQ (\$/GJ)	\$ 0.1930	\$ (0.009)	\$ 0.1840
Interruptible MTQ (\$/GJ)	\$ 1.2520	\$ (0.026)	\$ 1.2260

3
 4 When assessed against the Bonbright rate design principles, this option aligns with principle 2 by
 5 bringing the R:C ratios within the range of reasonableness:

6 • **Principle 2 – Fair appointment of costs among customers**

7 All R:C ratios of the applicable rate schedules fall within the range of reasonableness.
 8 Therefore, the cost recovery through each rate schedule closely reflects the fair appointment
 9 of costs from each customer group.

10 However, this option offers no improvement to principle 3, and is not as well aligned with principles
 11 4 and 6 when compared to all other options explored:

12 • **Principle 3 – Price signals that encourage efficient use and discourage inefficient use**

13 Under this option, the changes in the Basic Charges for RS 2 and RS 3/23, plus the offset
 14 from the reduction in the variable delivery rates of both rate schedules, will move the economic
 15 crossover point back to 2,000 GJ and realign it with the segmentation threshold between RS
 16 2 and RS 3/23. This is confirmed in Table 3 below.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 60

1 However, since this option uses RS 2 to absorb all revenue shifts from RS 5/25 and RS 22 as
 2 well as to maintain the economic crossover point between RS 2 and RS 3/23 rate schedules
 3 to 2,000 GJ, the Basic Charge of RS 2 will have to be increased significantly as shown in
 4 Table 2 above which will result in the highest bill impact to RS 2 customers out of all options
 5 explored. The increase in the RS 2 Basic Charge under this option is \$0.3658 per day (an
 6 approximate increase of \$134 per year) versus an increase of \$0.2026 per day under the
 7 proposed Option 5 (an approximate increase of \$74 per year). This level of increase to the
 8 Basic Charge would impact the price signal for small commercial customers under RS 2 and
 9 would discourage the efficient use of energy, contrary to Bonbright's rate design principle 3.

10 **Table 3: Economic Crossover Volume between RS 2 and RS 3/23 (Using RS 2 for Revenue**
 11 **Rebalancing and Maintaining Economic Crossover between RS 2 and RS 3/23)**

Line	Rate Components	Reference	RS 2	RS 3/23	Diff.
1	Basic Charge (per day)		1.3143	5.2625	
2	Number of Days		365.25	365.25	
3	Basic Charge Revenue (\$)	Line 1 x Line 2	480	1,922	1,442
4					
5	Delivery Charge (\$/GJ)		4.313	3.843	
6	Cost of Gas (\$/GJ)		6.750	6.499	
7	Total Variable Cost (\$/GJ)	Line 5 + Line 6	11.063	10.342	0.721
8					
9	Volume Threshold (GJ)	Line 3 / Line 7	2,000	2,000	2,000

13 • **Principle 4 – Customer understanding and acceptance**

14 As basic charges usually remain constant during FEI's annual rate changes, significantly
 15 increasing the RS 2 Basic Charge under this option will likely lead to customer confusion and
 16 could impact customer acceptance (especially Small Commercial customer acceptance) of
 17 FEI's rates.

18 • **Principle 6 – Rate stability (Customer rate impact should be managed)**

19 Under this option, there will be no bill impact to RS 1 customers, and the bill impact to the
 20 average RS 2 customer will remain relatively small at 1.21 percent or \$52 per year. However,
 21 it is still the largest impact to RS 2 customers out of all options explored and the large increase
 22 in the Basic Charge of RS 2 will have a significant impact on those customers that have small
 23 or minimal volumes. This is because customers that have small or minimal volumes would
 24 have limited opportunity to offset the increased Basic Charge through decreased consumption
 25 (as shown in Table 2 above, the variable charges of RS 2 will be reduced under this option to
 26 offset some of the increase in the Basic Charge). For example, assuming a particular Small
 27 Commercial customer has no volumes (which could occur over time when the commercial
 28 property is under development/renovation, changing ownership/lease, or vacant) and pays
 29 the Basic Charge only, they will experience the maximum bill impact of \$134 per year since
 30 this customer would not be able to offset the increase through the reduced variable charges.

1 This level of bill impact is worse than all other options explored and is therefore less aligned
 2 with the rate design principle of rate stability.

3 Tables 4 and 5 below provide an updated summary of the revenue shift between rate schedules
 4 and an updated summary of bill impacts amongst all rebalancing options considered, removing
 5 Option 1 and including the option requested in this IR. The proposed Option 5 continues to result
 6 in the least bill impact to both RS 1 and RS 2 customers while still maintaining the economic
 7 crossover point between RS 2 and RS 3/23 at 2,000 GJ.

8 **Table 4: Summary of Revenue Shift between Rate Schedules for all Rebalancing Options (\$000s)**

	Revenue Shift (\$000s)					
	Option 2a: Revenue Rebalancing Only Using RS 1	Option 2b: Revenue Rebalancing Only Using RS 2	Option 3: Revenue Rebalancing Using RS 1 plus Maintaining Economic Crossover between RS 2 and RS 3/23, and between RS 3/23 and RS 5/25	Option 4: Revenue Rebalancing Using RS 2 plus Maintaining Economic Crossover between RS 2 and RS 3/23, and between RS 3/23 and 5/25	Option 5: Revenue Rebalancing Using RS 1 plus Maintaining Economic Crossover between RS 2 and RS 3/23 Only	BCUC IR1 19.1: Revenue Rebalancing Using RS 2 plus Maintaining Economic Crossover between RS 2 and RS 3/23 Only

14

15

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 62

1 On page 83 of the Application, FEI provides Table 5-23 which shows the R:C ratios after
2 the preferred revenue rebalancing option (Option 5) for RS 5/25 and RS 22 are both 105.0
3 percent.

4 19.2 Please explain why FEI proposes to move RS 5/25 and RS 22 to the upper bound
5 of the range of reasonableness as opposed to moving these two rate schedules
6 closer to the center of the range (i.e. 100 percent).
7

8 **Response:**

9 There is no requirement to rebalance back to unity, and FEI considers its proposed rebalancing
10 approach to be the best approach for all customer classes because it minimizes rate impacts for
11 all the customer classes used to rebalance RS 5/25 and RS 22 back to the range of
12 reasonableness.

13 The main impact of rebalancing the R:C ratios of RS 5/25 and RS 22 to unity will be additional bill
14 impacts to RS 1 customers, which will have to absorb a larger revenue shift. The revenue shift to
15 RS 1 under this approach will increase the revenue shift to be absorbed by RS 1 under Option 5
16 from approximately \$4.5 million to \$16.6 million, which is an additional \$12.1 million. Please refer
17 to the response to BCUC IR1 19.3 for a detailed assessment of this option (rebalancing RS 5/25
18 and RS 22 to unity).

19 As was discussed in the 2016 COSA and RDA, including by the BCUC in the 2016 COSA
20 Decision, due to the assumptions, estimates and judgements involved in a COSA study, it is
21 appropriate to use a range of reasonableness. Accordingly, FEI considers that as long as the R:C
22 ratio of each rate schedule (except for RS 4 and RS 7/27) is within the range of reasonableness,
23 the rates are sufficient to recover the fair or full costs to serve that rate schedule.

24 FEI's view is also shared by Elenchus. In response to CEC IR1 2.2 in the 2016 COSA and RDA
25 proceeding, Elenchus stated:¹⁶

26 If one or more ratios fall outside the accepted range, then rebalancing should be
27 undertaken. Rebalancing should be undertaken to move all classes that are
28 outside the approved range to the nearest boundary.

29 This view was also supported by the BCUC in their determination on the appropriateness of
30 rebalancing to unity in the 2016 RDA Decision and Order G-135-18 (2016 RDA Decision):¹⁷

31 In this decision, the Panel places weight on the evidence provided by Elenchus that:

- 32 • Any R:C ratio that is within the defined range of reasonableness can be considered
33 to be full cost recovery;

¹⁶ Exhibit A2-8, Elenchus response to CEC IR1 2.2.

¹⁷ Page 42.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 63

- 1 • Rebalancing should be undertaken to move all classes that are outside the
2 approved range to the nearest boundary;
3 • It is not appropriate to periodically rebalance to R:C ratios of 1.00; and
4 • Elenchus is not aware of any jurisdiction that periodically rebalances rates so that
5 all R:C ratios are 1.00. [Emphasis Added]

6 There have been no changes in circumstances between the BCUC's determinations in the 2016
7 COSA and RDA and the current Application which would suggest that a change in the approach
8 to rebalancing is necessary or warranted.

9 Ultimately, as unity does not necessarily measure the true cost to serve a particular customer
10 class, FEI does not consider it appropriate to place additional bill impacts on RS 1 customers
11 simply to achieve unity for RS 5/25 and RS 22 customers when the rates already recover the fairly
12 allocated cost of service at the nearest boundary.

13
14

15

16 19.3 Please explain whether FEI considered rebalancing RS 5/25 and RS 22 to an R:C
17 ratio of 100 percent.

18 19.3.1 Please discuss how this alternative could be implemented and explain
19 whether it could be achieved while maintaining the economic crossover
20 between: (i) RS 2 and RS 3/23 only, and (ii) RS 2 and RS 3/23, and
21 between RS 3/23 and RS 5/25.

22 19.3.2 Please provide an assessment of this revenue rebalancing option against
23 Bonbright's rate design principles. Please specify assumptions used.

24 19.3.3 In a similar format to Table 5-18 in the Application, please provide a table
25 showing the rate changes to each affected rate schedule under this
26 revenue rebalancing option. Please specify assumptions used.

27 19.3.4 Please expand Tables 5-21 and 5-22 to include this revenue rebalancing
28 option, while excluding revenue rebalancing Option 1 (Status Quo).
29 Please specify assumptions used.

30

31 **Response:**

32 Please refer to the response to BCUC IR1 19.2 for the reasons why FEI did not consider
33 rebalancing RS 5/25 and RS 22 to an R:C ratio of 100 percent.

34 However, to be responsive, FEI provides an assessment of this option below using the same
35 approach as the other options assessed in Section 5.3 of the Application.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 64

1 Tables 1 and 2 below provide a similar view as Tables 5-17 and 5-18 of the Application, but for
 2 the option described in this IR, using RS 1 to rebalance the R:C ratios of RS 5/25 and RS 22 to
 3 unity plus adjustments to RS 2 and RS 3/23 to maintain the economic crossover between RS 2
 4 and RS 3/23. Under this option, the revenue shift to RS 1 customers will become approximately
 5 \$16.6 million with a bill impact of 1.3 percent (equivalent to approximately \$18 per year) for the
 6 average residential customer. In comparison, under FEI's proposed rebalancing Option 5, the
 7 revenue shift to RS 1 customers is approximately \$4.5 million and the average bill impact is 0.4
 8 percent (equivalent to approximately \$4.95 per year).

9 **Table 1: 2023 COSA R:C and M:C Results after Revenue Rebalancing (Rebalancing RS 5/25 and**
 10 **RS 22 to Unity using RS 1 and Maintaining Economic Crossover between RS 2 and RS 3/23)**

Rate Schedule	Initial COSA		Revenue Shift (\$000s)	Approx. Annual Bill Impact (%)	COSA after Rebalancing	
	R:C	M:C			R:C	M:C
Rate Schedule 1 <i>Residential Service</i>	97.3%	95.0%	16,609	1.3%	98.6%	97.4%
Rate Schedule 2 <i>Small Commercial Service</i>	98.0%	95.6%	145	0.04%	98.1%	95.7%
Rate Schedule 3/23 <i>Large Commercial Sales and Transportation</i>	104.0%	111.2%	(145)	(0.04%)	103.9%	111.0%
Rate Schedule 5/25 <i>General Firm Sales and Transportation</i>	106.9%	126.9%	(12,101)	(6.5%)	100.0%	100.0%
Rate Schedule 6 <i>Natural Gas Vehicle Service</i>	96.2%	91.0%	-	-	96.2%	91.0%
Rate Schedule 22 <i>Large Volume Transportation Service</i>	110.0%	110.2%	(303)	(9.1%)	100.0%	100.0%
Rate Schedule 22A <i>Transportation Service (Closed) Inland</i>	101.8%	101.9%	-	-	101.8%	101.9%
Rate Schedule 22B <i>Transportation Service (Closed) Columbia</i>	100.1%	100.1%	-	-	100.1%	100.1%

Rate Schedule (Rates Not Set Using Allocated Costs)	Initial COSA		Revenue Shift (\$000s)	Approx. Annual Bill Impact (%)	COSA after Rebalancing	
	R:C	M:C			R:C	M:C
Rate Schedule 4 <i>Seasonal Firm Gas Service</i>	124.1%	339.0%	(99)	(6.3%)	116.3%	261.7%
Rate Schedule 7/27 <i>General Interruptible Sales and Transportation</i>	122.4%	628.0%	(4,107)	(4.6%)	116.8%	496.0%

1 **Table 2: Summary of Rate Changes (Rebalancing RS 5/25 and RS 22 to Unity using RS 1 and**
 2 **Maintaining Economic Crossover between RS 2 and RS 3/23)**

Rate Schedule	Current 2023 Approved Rates		Option (BCUC IR1 19.3)	
		Changes		
RS 1 - Residential				
Basic Charge (\$/Day)	\$ 0.4085	\$ -	\$ 0.4085	
Delivery Charge (\$/GJ)	\$ 6.010	\$ 0.200	\$ 6.210

Interruptible MTQ (\$/GJ)	\$ 1.2520	\$ (0.097)	\$ 1.1550	

3
 4 The following is the assessment of this option against the Bonbright rate design principles.

5 • **Principle 2 – Fair appointment of costs among customers**

6 All R:C ratios of the applicable rate schedules fall within the range of reasonableness.
 7 Therefore, the cost recovery through each rate schedule closely reflects the fair appointment
 8 of costs from each customer group. However, under this option, RS 1 customers would have
 9 higher R:C and M:C ratios than RS 2 small commercial customers as shown in Table 1 above.

10 • **Principle 3 – Price signals that encourage efficient use and discourage inefficient use**

11 Table 3 below confirms that, under this option, the increase in the Basic Charge for both RS
 12 2 and RS 3/23, plus the offset from the reduction of the variable charges, would move the
 13 economic crossover point back to 2,000 GJ and realign it with the segmentation threshold
 14 between RS 2 and RS 3/23. FEI notes that the basic and variable charges for RS 2 and RS
 15 3/23 under this option would be identical to the proposed Option 5. The only change would be
 16 the rate impact to RS 1 customers.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 66

1 As part of this response, FEI did not develop a separate scenario that would also maintain the
 2 economic crossover between RS 3/23 and RS 5/25 as requested in BCUC IR1 19.3.1(ii). This is
 3 because the impact with or without maintaining the economic crossover between RS 3/23 and
 4 RS 5/25 would be identical to the changes between Option 3 and Option 5 as presented in Table
 5 5-22 of the Application. I.e., the bill impact to RS 2 customers will increase from 0.04 percent (or
 6 average approximately \$1.65 per year) to 1.1 percent (or average approximately \$45 per year)
 7 while the bill credit to RS 3/23 customers would increase from 0.04 percent (or average savings
 8 of \$10 per year) to 1.2 percent (or average savings of \$469 per year) if the economic crossover
 9 between RS 3/23 and RS 5/25 is also maintained.

10 **Table 3: Economic Crossover Volume between RS 2 and RS 3/23 (Rebalancing RS 5/25 and RS 22**
 11 **to Unity using RS 1 and Maintaining Economic Crossover between RS 2 and RS 3/23)**

Line	Rate Components	Reference	RS 2	RS 3/23	Diff.
1	Basic Charge (per day)		1.1511	5.2625	
2	Number of Days		365.25	365.25	
3	Basic Charge Revenue (\$)	Line 1 x Line 2	420	1,922	1,502
4					
5	Delivery Charge (\$/GJ)		4.343	3.843	
6	Cost of Gas (\$/GJ)		6.750	6.499	
7	Total Variable Cost (\$/GJ)	Line 5 + Line 6	11.093	10.342	0.751
8					
9	Volume Threshold (GJ)	Line 3 / Line 7	2,000	2,000	2,000

13 • **Principle 4 – Customer understanding and acceptance**

14 The changes in the Basic Charges for RS 2 and RS 3/23 are identical to FEI’s proposed
 15 Option 5, for which the increases are much smaller than under Options 3 and 4. As such,
 16 while this option (and also Option 5) might still lead to customer confusion and could impact
 17 customer acceptance due to the change in the Basic Charges, it is an improvement from
 18 Options 3 and 4 given that the impact is much smaller.

19 • **Principle 6 – Rate stability (Customer rate impact should be managed)**

20 The bill impacts to the average RS 1 customer under this option are significantly higher than
 21 FEI’s proposed Option 5, increased from 0.4 percent (or an average of approximately \$4.95
 22 per year) to 1.3 percent (or an average of approximately \$18 per year), as shown in Table 1
 23 above.

24 In addition, rebalancing RS 5/25 and RS 22 customers to unity would result in a significant
 25 reduction in these customers’ bills, as shown in Table 1 above. An average RS 5/25 customer
 26 would see savings of 6.5 percent on their bill (average approximately \$10.7 thousand per
 27 year) and an average RS 22 customer would see savings of 9.1 percent on their bill (or
 28 average approximately \$111.8 thousand per year), both at the expense of a significant
 29 increase for RS 1 customers.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 67

1 Tables 4 and 5 below provide an updated summary of the revenue shift between rate schedules
 2 and an updated summary of bill impacts amongst all rebalancing options considered, excluding
 3 Option 1 but including the scenario requested in this IR (similar to Tables 5-21 and 5-22 of the
 4 Application). FEI's proposed Option 5 would result in significantly less bill impacts to RS 1
 5 customers than the scenario requested in this IR.

6 **Table 4: Summary of Revenue Shift between Rate Schedules for all Rebalancing Options (\$000s)**

Revenue Shift (\$000s)						
	Option 2a: Revenue Rebalancing Only Using RS 1	Option 2b: Revenue Rebalancing Only Using RS 2	Option 3: Revenue Rebalancing Using RS 1 plus Maintaining Economic Crossover between RS 2 and RS 3/23, and between RS 3/23 and RS 5/25	Option 4: Revenue Rebalancing Using RS 2 plus Maintaining Economic Crossover between RS 2 and RS 3/23, and between RS 3/23 and 5/25	Option 5: Revenue Rebalancing Using RS 1 plus Maintaining Economic Crossover between RS 2 and RS 3/23 Only	BCUC IR1 19.3: Revenue Rebalancing RS 5/25 and 22 to Unity plus Maintaining Economic Crossover between RS 2 and RS 3/23 Only

11
 12
 13
 14 19.4 Please explain whether FEI considered rebalancing all rate schedules to an R:C
 15 ratio of 100 percent and provide the pros and cons of this revenue rebalancing
 16 option.
 17

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 68

1 **Response:**

2 FEI does not see any advantage of rebalancing all rate schedules to an R:C ratio of 100 percent.

3 FEI has not considered rebalancing all rate schedules to an R:C ratio of 100 percent for the
4 following reasons:

5 1. In the 2016 RDA Decision,¹⁸ the BCUC found that an R:C range of reasonableness of 95 to
6 105 percent was appropriate and directed FEI to use this R:C range of reasonableness to
7 inform its rate design and rebalancing proposals in the 2016 COSA and RDA. Specifically, the
8 Panel placed weight on the evidence provided by Elenchus that:

- 9
- 10 • Any R:C ratio that is within the defined range of reasonableness can be considered to be full cost recovery;
 - 11 • Rebalancing should be undertaken to move all classes that are outside the approved range to the nearest boundary;
 - 12 • It is not appropriate to periodically rebalance to R:C ratios of 1.00; and
 - 13 • Elenchus is not aware of any jurisdiction that periodically rebalances rates so that all R:C ratios are 1.00.
- 14
- 15

16 As Elenchus noted, and the BCUC Panel accepted, any R:C ratio that is within the defined
17 range of reasonableness can be considered full cost recovery, or in other words, the fair cost
18 by each rate schedule is recovered through their individual rates. Specifically, in response to
19 CEC IR 18.4 on its assessment of FEI's 2016 COSA study, Elenchus stated:

20 In the case of cost allocation there is no underlying true value that is being
21 estimated. There are multiple possible ways of defining cost causality, each of
22 which is equally valid, which implies that is a range of values that could each be
23 considered to be the true value.¹⁹

24 In consideration of the above, FEI does not consider it necessary or preferable to rebalance
25 all rate schedules to unity.

26 2. Due to the many assumptions, estimates, and judgements made to produce a COSA study,
27 the level of precision implying that balancing to unity equals the true cost to serve a rate
28 schedule does not exist. This was recognized by the BCUC Panel in the 2016 RDA Decision:²⁰

29 While the BCUC, in its COSA and R:C Ratios Decision, accepted that in theory an
30 R:C ratio of 100 percent for each rate schedule would indicate that the revenues
31 recovered from each rate schedule are equal to the cost to serve them, the

¹⁸ Decision and Order G-135-18, pages 41 to 42.

¹⁹ Exhibit A2-8, Elenchus response to CEC IR 18.4.

²⁰ Page 41.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 69

1 assumptions, estimates and judgements involved in a COSA study, make it
2 appropriate to use a range of reasonableness. [Emphasis added]

3 3. Rebalancing all rate schedules to unity creates unnecessary additional rate impacts and could
4 result in rate volatility. As demonstrated in the response to BCUC IR1 19.4.1, rebalancing all
5 rate schedules to unity means RS 1 customers will experience more significant bill impacts.
6 In comparison to FEI's proposed Option 5, rebalancing all rate schedules to unity means that
7 the increase to a residential customer's bill would be 630 percent greater.

8 4. The rates of RS 4 (seasonal) and RS 7/27 (fully interruptible) are not cost-based. Currently,
9 the rates for these customers are set at a discount from RS 5/25 on a value-of-service basis.
10 It is not possible to set these rates such that the R:C ratios for these rate schedules are equal
11 to unity because their rates would become so low as to make them "free riders" on FEI's
12 transmission and distribution systems, which would be unfair to other customers.

13
14

15

16 19.4.1 Please discuss how this alternative could be implemented and explain
17 whether it could be achieved while maintaining the economic crossover
18 between: (i) RS 2 and RS 3/23, and (ii) RS 2 and RS 3/23, and between
19 RS 3/23 and RS 5/25.

20

21 **Response:**

22 Please refer to the response to BCUC IR1 19.4 for the reasons why FEI has not considered
23 rebalancing all rate schedules to achieve an R:C ratio of 100 percent.

24 However, to be responsive, FEI provides Tables 1 and 2 below (in a similar view as Tables 5-17
25 and 5-18 of the Application) to illustrate the implementation of a scenario in which all rate
26 schedules (except RS 4 and RS 7/27) are rebalanced to achieve an R:C ratio of 100 percent. FEI
27 notes that this scenario assumes the rates for RS 4 (Seasonal) and RS 7/27 (Fully Interruptible)
28 would continue to be set at a discount to RS 5/25.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 70

Firm MTQ (\$/GJ)	\$ 0.1930	\$ (0.020)	\$ 0.1730
Interruptible MTQ (\$/GJ)	\$ 1.2520	\$ (0.097)	\$ 1.1550

2
3 If all rate schedules, except RS 4 and RS 7/27, are rebalanced to unity, then the revenue required
4 from residential customers will increase from approximately \$4.5 million (FEI's proposed Option
5 5) to approximately \$34.8 million. For the average residential customer, the bill impact due to
6 rebalancing to unity would be approximately 2.7 percent (or \$38 per year). The average RS 2
7 customer would also see a bill impact of approximately 2.0 percent (or \$86 per year), compared
8 to 0.04 percent (or \$1.65 per year) under FEI's proposed Option 5. The average RS 3/23 customer
9 would see bill savings of approximately 3.8 percent (or savings of \$1,587 per year); however, as
10 further discussed below, this scenario would result in a significant increase in the Basic Charge
11 for RS 3/23 customers.

12 Table 3 below also confirms that by increasing the Basic Charges for both RS 2 and RS 3/23,
13 plus an offset from the reduction in variable charges, the economic crossover point between RS
14 2 and RS 3/23 can be maintained at 2,000 GJ. However, this would require the Basic Charge for
15 RS 2 to increase from \$0.9485 per day to \$1.6868 per day, an increase of approximately 78

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 72

1 percent or \$270 per year, and the Basic Charge for RS 3/23 to increase from \$4.7895 per day to
 2 \$7.5135 per day, which is an increase of approximately 57 percent or \$995 per year.

3 **Table 3: Economic Crossover Volume between RS 2 and RS 3/23 (All R:C Ratios, except RS 4 and**
 4 **RS 7/27, to 100 percent)**

Line	Rate Components	Reference	RS 2	RS 3/23	Diff.
1	Basic Charge (per day)		1.6868	7.5135	
2	Number of Days		365.25	365.25	
3	Basic Charge Revenue (\$)	Line 1 x Line 2	616	2,744	2,128
4					
5	Delivery Charge (\$/GJ)		3.999	3.186	
6	Cost of Gas (\$/GJ)		6.750	6.499	
7	Total Variable Cost (\$/GJ)	Line 5 + Line 6	10.749	9.685	1.064
8					
9	Volume Threshold (GJ)	Line 3 / Line 7	2,000	2,000	2,000

6 FEI notes that it did not analyze a separate scenario that would maintain the economic crossover
 7 between RS 3/23 and RS 5/25. As discussed in the response to BCUC IR1 19.3, maintaining the
 8 economic crossover between RS 3/23 and RS 5/25 would only serve to further increase RS 2
 9 customers' Basic Charge.

10 Tables 4 and below provide an updated summary of the revenue shift between rate schedules
 11 and an updated summary of bill impacts amongst all rebalancing options considered, excluding
 12 Option 1 but including the scenario requested in this IR, where all rate schedules are rebalanced
 13 to unity. This scenario would result in a significant impact to RS 1 and RS 2 customers when
 14 compared to FEI's proposed Option 5.

15 **Table 4: Summary of Revenue Shift between Rate Schedules for all Rebalancing Options (\$000s)**

	Revenue Shift (\$000s)						BCUC IR1 19.4.1: Rebalancing all R:C Ratio to 100% (Except RS 4 and 7/27)

3
4
5
6
7 On page 2 of the Application, FEI states:

8 [...] The results of the 2023 COSA therefore confirm that FEI's existing rates and
 9 rate designs are working well and as intended.

10 19.5 Please discuss what impact, if any, rebalancing all rate schedules to an R:C ratio
 11 of 100 percent would have on the existing rate design and whether it would lead
 12 to required rate design changes. If so, what would be the required rate design
 13 changes?
 14

15 **Response:**

16 For the reasons explained in the responses to BCUC IR1 19.4 and 19.4.1, FEI does not consider
 17 rebalancing all customer classes to be necessary or preferable. However, despite the resulting
 18 large bill impacts to RS 1 and RS 2 customers in order to reach unity (shown in the response to
 19 BCUC IR1 19.4.1), the current rate designs will continue to be operable. No rate design changes
 20 would be required to achieve unity for all rate schedules (except for RS 4 and RS 7/27).

21
22
23
24 On pages 62, 65, 68, 72 and 76 of the Application, FEI provides Tables 5-4, 5-7, 5-10, 5-
 25 14 and 5-18, respectively, which summarize the rate changes to affected rate schedules
 26 under each of the revenue rebalancing options presented in the Application.

27 19.6 Please explain, with rationale and an illustrative example(s), how FEI allocated the
 28 rate changes to the various rate elements (e.g. RS 22 firm demand charge, firm
 29 monthly transportation quantity (MTQ) delivery charge and Interruptible MTQ
 30 delivery charge).

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 74

1
2 **Response:**

3 FEI provides the rationale for the changes to the various rate elements in each rate schedule
4 using the proposed rebalancing Option 5 of the Application as example. The rationale for other
5 options is the same.

6 ***Residential RS 1***

7 The change in the RS 1 delivery rate is based on the increase in delivery margin. There is no
8 change to the Basic Charge. Please see Table 1 below for the calculation:

9 **Table 1: Calculation of the RS 1 Delivery Rate under the Rebalancing Proposal (Option 5)**

Line	Particular	Reference	Amount
1	RS 1 Delivery Margin Rebalancing (\$000s)	Schedule 1, Line 24	4,519.247
2			
3	Existing RS 1 Delivery Rate (\$/GJ)	2023 Approved	6.010
4	RS 1 Volume (TJ)	2023 Approved	82,890
5			
6	Change in RS 1 Delivery Rate (\$/GJ)	Line 1 / Line 4	0.055
7	Rebalanced in RS 1 Delivery Rate (\$/GJ)	Line 3 + Line 6	6.065

11 ***Small Commercial RS 2 and Large Commercial RS 3/23***

12 In order to satisfy the following requirements:

- 13 a) Shifting the crossover point between RS 2 and RS 3/23 back to 2,000 GJ;
14 b) Depending on the rebalancing option, additional changes are required for RS 2 to absorb
15 the revenue shift; and
16 c) Maintaining the R:C ratios of both rate schedules within the range of reasonableness of
17 95 percent to 105 percent,

18 FEI used the Excel Solver functions to find the optimal values for the Basic Charges and Delivery
19 Rates for both RS 2 and RS 3/23. Table 5-19 of the Application confirms the Excel Solver
20 functions satisfy item a) above, and Table 5-17 of the Application confirms the Excel Solver
21 functions satisfy items b) and c) above. The same approach was used for all other rebalancing
22 options explored as part of the Application as well as in response to the scenarios requested in
23 these IRs.

24 ***General Firm Service RS 5/25***

25 For RS 5/25, there is no change to the monthly Basic Charge or Administration Charge. Both the
26 delivery rate and demand charge are adjusted for the revenue rebalancing proportionally based
27 on the 2023 forecast of recovery from delivery rates and from the demand charges. Table 2 below
28 provides the calculations.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 75

3

4 **RS 22 Large Volume Transportation Service**

5 FEI used the same underlying calculations as were used in Table 9-26 of the FEI 2016 COSA
 6 and RDA for the RS 22 Firm Service in this Application. These calculations include setting the
 7 interruptible service equal to the effective firm rates and setting the Firm Monthly Transportation
 8 Quantity (MTQ) rate at approximately 15 percent of the effective firm rate, while the remaining 85
 9 percent was used to set the Firm Daily Transportation Quantity (DTQ) rate. Table 3 below
 10 provides the calculations of the changes in each rate component of RS 22 based on a revenue
 11 rebalancing amount of \$151 thousand (as shown in Table 5-21 of the Application).

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 76

1 Table 3: Calculation of the Rate Components of RS 22 under the Rebalancing Proposal (Option 5)

Line	Particular	Reference	Amount
1	RS 22 Delivery Margin Rebalancing	Schedule 1, Line 24	(150.726)
2	Current RS 22 Delivery Margin at 2023 Rates	Schedule 1, Line 16	3,257.118
3	Proposed Rebalanced RS 22 Delivery Margin (\$000s)	Line 1 + Line 3	3,106.391
4	<i>(Incl. Known and Measureable Changes)</i>		
5			
6	Less: Basic Charge Collected Under RS 22	-Line 16	(571.584)
7	Less: Admin Charge Collected Under RS 22	-Line 17	(6.084)
8	Add: UAF Gas Costs	Schedule 1, Line 17	80.184
9	Total Delivery Margin to be Collected thru Delivery Rates (\$000s)	Sum of Line 3 to Line 8	2,608.908
10			
11	RS 22 Basic Charge (\$/Mth)		\$ 3,664.000
12	RS 22 Admin Charge (\$/Mth)		\$ 39.000
13			
14	Number of RS 22 Firm Customer	Schedule 7, Line 5	13
15	Total RS 22 Basic Charge Recovery (\$000s)	Line 11 x Line 14 x 12 / 1,000	571.584
16	Total RS 22 Admin Charge Recovery (\$000s)	Line 12 x Line 14 x 12 / 1,000	6.084
17			
18	RS 22 Firm Volume (TJ)	Schedule 7, Line 2	2,128
19	New RS 22 Effective Firm Rate (\$/GJ)	Line 9 / Line 18 (Rounded to 3 Decimal Places)	\$ 1.226
20			
21	Proposed RS 22 Rates		
22	Firm DTQ Charge (\$/GJ/Mth)	(Line 19 - Line 23) x 365 days / 12 Mth (See Note 1)	\$ 31.694
23	Firm MTQ Charge (\$/GJ)	Line 19 x 15%	\$ 0.184
24	Interruptible MTQ (\$/GJ)	Line 19 (Equal to Firm Effective Rate in \$/GJ)	\$ 1.226

3 Note to Table:

4 *Note 1): Firm DTQ (Daily Transportation Quantity) equals to MTQ x 12 Months / 365 Days. The Firm MTQ*
 5 *Charge in \$/GJ recovers 15% of the total effective firm rate (Line 19) with the remaining balance recovered*
 6 *through the Firm DTQ Rate.*

7 RS 4 Seasonal and RS 7/27 Interruptible

8 FEI used the same underlying calculations as were used in Table 9-20 of the FEI 2016 COSA
 9 and RDA for the RS 7/27 Fully Interruptible Service in this Application and Table 9-21 of the FEI
 10 2016 COSA and RDA for the RS 4 Seasonal Service.

11 For the RS 7/27 Fully Interruptible customers, a discount of approximately 18 percent was
 12 maintained from the effective rates of RS 5 General Firm Service based on an effective RS 5 load
 13 factor of 90.9 percent²¹. For RS 4 Seasonal customers, as explained in Section 9.7.5 of the 2016
 14 COSA and RDA, the delivery rates during the off-peak were set equal to the Demand Charge of
 15 RS 5/25 at a 100 percent load factor plus the Delivery Charge for RS 5/25, and during the
 16 Extension Period, the rate is set to equal 1.5 times the Delivery Charge of RS 7/27. Table 4 below
 17 provides a reconciliation of the RS 7/27 rates and RS 4 rates as set out in Section 5-24 of the
 18 Application (i.e., as proposed for Option 5).

²¹ As part of the tariff for RS 5, the daily demand per GJ includes a multiplier of 1.1, thus the effective load factor for RS 5 would be 100 percent divided by 1.1 = 90.9 percent, which is then used to convert the demand charge under RS 5 in \$/Peak GJ/Mth to the effective demand charge in \$/GJ.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 77

1 **Table 4: Reconciliation of RS 7/27 and RS 4 Delivery Rates Calculation (Proposed Option 5)**

Line	Particular	Reference	Estimated Final Rates (Option 5)
1	RS 5/25 Effective Load Factor	100% / 1.1	0.909
2	RS 5/25 Demand Charge (\$/GJ/Day)	Table 5-24 of Application	\$ 28.289

3

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 78

1 **20.0 Reference: REVENUE REBALANCING**
 2 **Exhibit B-1, Section 5.1, p. 51, Section 5.3, p. 59**
 3 **Bonbright Rate Design Principles**

4 On page 51 of the Application, regarding the Bonbright rate design principles, FEI states
 5 that it “does not apply all eight principles, and also not in any priority or with any particular
 6 weighting.”

7 On page 59 of the Application, FEI states that it “assesses each revenue rebalancing
 8 option against Bonbright’s rate design principles and identifies the preferred rebalancing
 9 option.” FEI does not comment on principle 1: “Recovering the Cost of Service”, principle
 10 5: “Practical and cost-effective to implement”, principle 7: “Revenue stability” and principle
 11 8: “Avoidance of undue discrimination” when evaluating the revenue rebalancing options
 12 in the Application.

13 20.1 Please explain whether all revenue rebalancing options assessed in the
 14 Application and explored in these information requests would align with Bonbright’s
 15 rate design principles 1, 5 and 7.

16 **Response:**

17 FEI did not comment on principles 1, 5, and 7 in its assessment of the different rebalancing options
 18 because these principles are generally not impacted or are minimally impacted by the various
 19 options. However, in order to be responsive, FEI provides the following table of its assessment of
 20 Bonbright’s rate design principles 1, 5, and 7 for the rebalancing options explored in the
 21 Application as well as the options/scenarios requested by the BCUC and interveners in these IRs.
 22

Rate Rebalancing Option	Rate Design Principles	Assessment
Option 1 Status Quo	Principle 1: Recovering the Cost of Service	<p>There is generally no impact to FEI recovering its cost of service under this option. Rate schedules (i.e., RS 5/25 and RS 22) having R:C ratios higher than the upper bound range of reasonableness do not impact FEI’s ability to recover its cost of service.</p> <p>Without addressing the economic crossover points, the number of customers that could be impacted is small and under normal circumstances, this revenue deficiency will be made up with rate increases to all non-bypass customers in the subsequent years through FEI’s rate setting applications. Thus, this option does not impact FEI’s ability to recover its cost of service.</p>
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. It involves no change to existing rates.
	Principle 7: Revenue Stability	The number of customers impacted by the economic crossover points between RS 2 and RS 3/23, and between

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 79

Rate Rebalancing Option	Rate Design Principles	Assessment
		RS 3/23 and RS 5/25 are small. Therefore, there is no material impact to the stability of FEI's revenue.
Option 2a Revenue Rebalancing Using Only RS 1, Without Adjustment for Economic Crossover Between RS 2 & 3/23, and Between RS 3/23 & 5/25	Principle 1: Recovering the Cost of Service	Same as Option 1 above. There is generally no impact to FEI recovering its cost of service under this option. Any change in revenue due to customer switching will be made up with delivery rate changes through FEI's rate setting applications.
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different than annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	Same as Option 1. The number of customers impacted by the economic crossover points between RS 2 and RS 3/23, and between RS 3/23 and RS 5/25 is small. Thus, there is no material impact to the stability of FEI's revenue.
Option 2b Revenue Rebalancing Using Only RS 2, Without Adjustment for Economic Crossover Between RS 2 & 3/23, and Between RS 3/23 & 5/25	Principle 1: Recovering the Cost of Service	Same as Option 1 above. There is generally no impact to FEI recovering its cost of service under this option. Any change in revenue due to customer switching will be made up with delivery rate changes through FEI's rate setting applications.
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different from the annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	Same as Option 1, the number of customers impacted by the economic crossover points between RS 2 and RS 3/23, and between RS 3/23 and RS 5/25 is small. Thus, there is no material impact to the stability of FEI's revenue.
Option 3 Revenue Rebalancing Using RS 1 Plus Adjustment to RS 2 & RS 3/23 For Maintaining Economic Crossover Between RS 2 & RS 3/23; & Between RS 3/23 & RS 5/25	Principle 1: Recovering the Cost of Service	There is essentially no impact to FEI recovering its cost of service under this option as the economic crossover points between RS 2 and RS 3/23, and between RS 3/23 and RS 5/25 are addressed.
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different from the annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	There is no impact to the stability of FEI's revenue. Additionally, both economic crossover points are addressed.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 80

Rate Rebalancing Option	Rate Design Principles	Assessment
Option 4 Revenue Rebalancing Using RS 2 Plus Adjustment to RS 2 & RS 3/23 For Maintaining Economic Crossover Between RS 2 & RS 3/23; & Between RS 3/23 & RS 5/25	Principle 1: Recovering the Cost of Service	Same as Option 3 above. There is essentially no impact to FEI recovering its cost of service under this option as the economic crossover points between RS 2 and RS 3/23, and between RS 3/23 and RS 5/25 are addressed.
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different from the annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	There is no impact to the stability of FEI's revenue. Additionally, both economic crossover points are addressed.
Option 5 Revenue Rebalancing Using RS 1 Plus Adjustment to RS 2 & RS 3/23 For Maintaining Economic Crossover Between RS 2 & RS 3/23	Principle 1: Recovering the Cost of Service	Same or slightly better than Option 1 above; however, the economic crossover point between RS 3/23 and RS 5/25 is not addressed. There is generally no impact to FEI recovering its cost of service under this option. Any change in revenue due to customer switching between RS 3/23 and RS 5/25 will be small and will be made up with delivery rate increases during FEI's next rate setting application.
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different from the annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	There is no impact to the stability of FEI's revenue. The variance in revenue due to the economic crossover point between RS 3/23 and RS 5/25 is small.
BCUC IR1 19.2 & 19.3: RS 5/25 & 22 R:C Ratios at Unity	Principle 1: Recovering the Cost of Service	No change to FEI's ability to recover its cost of service. Having R:C ratios at unity or at 105% for RS 5/25 and RS 22 will not change FEI's ability to recover its cost of service.
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different from the annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	Same as Option 5 above. There is no impact to the stability of FEI's revenue. The variance in revenue due to the economic crossover point between RS 3/23 and RS 5/25 is small.
BCUC IR1 19.4 & 19.4.1: All R:C Ratios at Unity	Principle 1: Recovering the Cost of Service	In the absence of setting RS 4 and 7/27 to unity which would make them "free riders" on FEI's system, this option would result in FEI revenues being greater than the cost of service. See Table 1 of the response to BCUC IR1 19.4 where all firm service R:C ratios equal 100%, but RS 4 & 7/27 equal 116%.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 81

Rate Rebalancing Option	Rate Design Principles	Assessment
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different from the annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	In the absence of setting RS 4 and RS 7/27 to unity, this option would increase FEI's revenue by approximately \$12.5 million (see Table 1 of BCUC IR1 19.4.1), and so can be considered as reducing FEI's revenue stability.
BCOAPO IR1 1.8: Reallocate Revenue Shift to all Rate Schedules (excluding RS 4 & 7/27) with R:C Ratios capped at 105%	Principle 1: Recovering the Cost of Service	No change to FEI's ability to recover its cost of service. Having R:C ratios at 105% for most rate schedules will not change FEI's ability to recover its cost of service.
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different from the annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	Since all rate schedules, with the exception of RS 1 and RS 2, would have their R:C ratio sitting at the upper limit of range of reasonableness of 105%, it would be likely that most, if not all, of these rate schedules' revenues would exceed their costs by more than 105% in the near future. This would mean rebalancing in the opposite direction would be required and will reduce FEI's revenue from these rate schedules. The increase in FEI's revenue and the subsequent opposite rebalancing would reduce revenue stability.
RCIA IR1 19.1: Revenue Shift Reallocated to RS 1 & RS 2 Proportional to Delivery Revenue	Principle 1: Recovering the Cost of Service	This option is similar to the proposed Option 5 (except a small portion of revenue rebalancing will be absorbed by RS 2), but generally has no impact to FEI recovering its cost of service. Any change in revenue due to customer switching between RS 3/23 and RS 5/25 will be small and will be made up with delivery rate increases during the next rate setting application.
	Principle 5 Practical and Cost-Effective to Implement	There is no impact. This option is easy to administer. The change in rates is no different to the annual delivery rate changes or quarterly rate changes and is therefore practical to implement. There are no incremental costs to adjust the rates for all rate schedules.
	Principle 7: Revenue Stability	Similar to Option 5. There is no impact to the stability of FEI's revenue. The variance in revenue due to the economic crossover point between RS 3/23 and RS 5/25 is small.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 82

1 20.2 Please explain whether all revenue rebalancing options that result in all R:C ratios
2 of the applicable rate schedules being brought into the range of reasonableness
3 would align with principle 8.

4
5 **Response:**

6 Options that result in all R:C ratios of the applicable rate schedules being brought into the range
7 of reasonableness would partially align with principle 8. To improve the alignment with principle
8 8, the BCUC should also consider the options that deal with the economic crossover between RS
9 2 and 3/23. The rates applicable to RS 2 and RS 3/23 should result in approximately the same
10 cost to customers who consume approximately 2,000 GJ annually.

11
12

13
14 20.3 Please discuss how FEI's preferred rebalancing option aligns with Bonbright's rate
15 design principle 8 in the context of using RS 1 to absorb all revenue shifts from RS
16 5/25 and RS 22.

17
18 **Response:**

19 Using RS 1 to absorb all revenue shifts from RS 5/25 and RS 22 aligns with Principle 8, i.e., is
20 not unduly discriminatory, as similarly situated customers continue to be treated similarly,
21 consistent with the rate classes and rate design established and approved by the BCUC in 2016
22 and in previous years.

23 Further, using the residential rate class, which has had the lowest R:C ratio, to bear the revenue
24 shift is the best option available for the reasons discussed in Section 5 of the Application, and is
25 consistent with past FEI rate design applications approved by the BCUC. In addition, the revenue
26 shift has a minimal impact on rates and, even after the revenue shift, the residential rate class will
27 continue to have an R:C ratio within the lower end of the range of reasonableness.

28 In short, the revenue shift to RS 1 from RS 5/25 and RS 22 does not result in any change that
29 engages Principle 8, as FEI's rates remain not unduly discriminatory.

30

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 83

1 **21.0 Reference: REVENUE REBALANCING**

2 **Exhibit B-1, Section 5.2.2, p. 52, 57, Figures 5-3 and 5-4, p. 56,**
3 **Section 5.2.3, Table 5-2, p. 59, Section 5.3.3, Table 5-12, pp. 68–70,**
4 **Section 5.3.4, p. 72, Table 5-16, p. 74, Section 5.3.5, Table 5-20, pp.**
5 **77–78; Decision and Order G-135-18 on FEI 2016 Rate Design**
6 **Application (2016 RDA Decision)**
7 **Economic Crossover Between Rate Schedules**

8 On page 52 of the Application, FEI states:

9 [...] the current economic crossover volume between RS 2 and RS 3/23 at the
10 2023 Approved rates is approximately 1,515 GJ per year, which is already below
11 the segmentation volume threshold of 2,000 GJ per year that is set out in the tariffs
12 for these two customer groups. This deviation occurs because the Basic Charges
13 for both RS 2 and RS 3/23 remain constant over time while the variable delivery
14 charges are subject to change each year from FEI's rate-setting proceedings
15 (annual reviews during FEI's current 2020-2024 MRP or revenue requirement
16 applications).

17 21.1 Please explain how FEI mitigates the deviation of the economic crossover point
18 between RS 2 and RS 3/23 over time from the threshold of 2,000 GJ per year.

19
20 **Response:**

21 Since the 1993 Phase B Rate Design Decision, FEI has been addressing the crossover point at
22 2,000 GJ per year between RS 2 and RS 3/23 customers as part of each COSA and Rate Design
23 application. This was done in the 1996, 2001, and 2016 applications, and is included as part of
24 the current Application under the proposed Option 5.

25
26

27
28 21.2 Please discuss whether FEI considered rate design changes to address the
29 deviation of the economic crossover point between RS 2 and RS 3/23, and
30 between RS 3/23 and RS 5/25 if applicable, over time. If so, what rate design
31 changes were considered? And if not, why not?

32
33 **Response:**

34 FEI completed a major review of the crossover points between RS 2 and RS 3/23, and between
35 RS 3/23 and RS 5/25 as part of the 2016 COSA and RDA. Adjustments were made to the Basic
36 Charges of RS 2 and RS 3/23 as well as to the Demand Charge of RS 5/25 to address the
37 deviation of the economic crossover points between the rate schedules. However, FEI determined

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 84

1 that no major rate design changes were needed. Prior to the 2016 COSA and RDA, the crossover
2 points were reviewed during the 2001 RDA.

3 In the 2016 COSA and RDA, FEI examined the customer/class load profiles and load factors
4 between RS 2 and RS 3/23²² to see if changes might warrant resetting the threshold at a different
5 annual volume and if the pricing levels applied to the billing determinants would sufficiently
6 recover the allocated cost. The results were no change to the annual volume threshold between
7 RS 2 and RS 3/23 of 2,000 GJ; however, the Basic Charge and Delivery Charge for these two
8 rate schedules were changed to be in alignment with the 2,000 GJ threshold, yielding the same
9 cost for a customer consuming 2,000 GJ. This was reviewed again in this Application (i.e., Section
10 5.2.2) and FEI came to a similar conclusion as in the 2016 COSA and RDA, i.e., proposing in this
11 Application to make no change to the annual volume threshold but proposing adjustments to the
12 Basic Charges of both RS 2 and RS 3/23 to move the crossover point back to 2,000 GJ.

13 FEI also completed a similar review of the economic crossover point between RS 3/23 and RS
14 5/25 in both the 2016 COSA and RDA²³ and in this Application (Section 5.2.3). In the 2016 COSA
15 and RDA, no rate design changes were required for RS 3/23 and RS 5/25 except for a small
16 adjustment to the RS 5/25 Demand Charge for the economic crossover point between RS 3/23
17 and RS 5/25. In the current Application, FEI explored in Options 3 and 4 maintaining the crossover
18 point between RS 3/23 and RS 5/25; however, to achieve a balance between rate impacts to RS
19 3/23 customers and the economic crossover for RS 3/23 and RS 5/25 customers, no adjustments
20 were ultimately proposed in the proposed Option 5.

21
22

23

24 21.2.1 At what point in the deviation does FEI consider that rate design changes
25 are needed?
26

27

Response:

28 There would need to be a clear and definite shift or change in the customer load profile in terms
29 of annual use and load factor to segregate these rate schedules at different annual consumption
30 levels. For example, as demonstrated throughout Section 5.2.2 of the Application, the customer
31 load profiles in terms of annual use and load factors remain largely the same as load profiles in
32 the 2016 COSA and RDA, and the small deviation in the economic crossover point between rate
33 classes can be easily addressed by small adjustments to the basic charges without a
34 comprehensive rate design change. FEI considers it inefficient and unnecessary as part of this
35 Application to undergo a comprehensive rate design review when the customer load profiles are

²² Section 8.3.3 of the 2016 COSA and RDA.

²³ Section 9.5.6 of the 2016 COSA and RDA.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 85

1 largely the same and the deviation in the economic crossover point can be easily resolved through
2 adjustments to the basic and variable charges.

3
4

5

6 21.3 Please explain whether the economic crossover point between RS 2 and RS 3/23
7 would be maintained or whether the deviation would be reduced over time if both
8 the basic charges and delivery charges were subject to change each year by the
9 same percentage from FEI's rate-setting proceedings.

10 21.3.1 If yes, please discuss whether FEI considers this an appropriate revenue
11 rebalancing option to reduce the complexity of future revenue
12 rebalancing.

13

14 **Response:**

15 Flowing through rate changes from the Annual Reviews to both the Basic Charge and the Delivery
16 Charge will not reduce the complexity of future revenue rebalancing because of the gas cost
17 recovery charges.

18 The economic crossover point between RS 2 and RS 3/23 is determined by: (i) the Basic Charge,
19 (ii) the Delivery Charge, (iii) the Commodity Cost Recovery Charge, and (iv) the Storage and
20 Transport Charge in each of the rate schedules. Applying delivery rate changes to both the Basic
21 Charge and Delivery Charge would not prevent deviations from the 2,000 GJ crossover point.

22 Prior to the 2001 RDA, changes in rates from the Annual Reviews / Revenue Requirements
23 processes were flowed to both the Basic Charge and the Delivery Charge, but the crossover point
24 between RS 2 and RS 3/23 still needed to be reset to 2,000 GJ during the 2001 RDA.

25

26

27

28 On page 57 of the Application, FEI states:

29 While differences can also be found at other threshold levels, the threshold and
30 the relationship between load factor and consumption would need to be
31 significantly different than 2,000 GJ as well as the trend shown in Figure 5-5 above
32 to support moving away from the existing threshold of 2,000 GJ.

33 21.4 Please define "significantly different than 2,000 GJ as well as the trend shown in
34 Figure 5-5 " in the context of the above preamble.

35

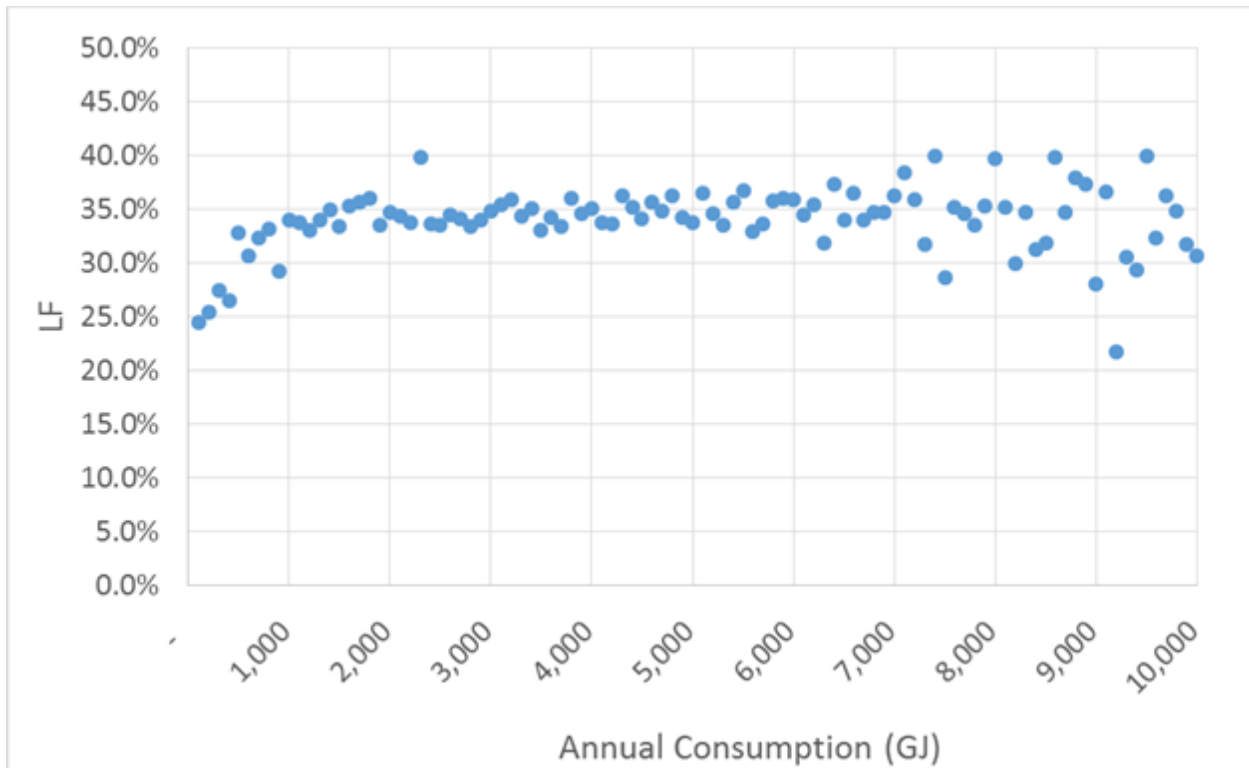

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 86

1 **Response:**

2 The following four factors were considered by FEI to determine that there was no significant
 3 difference observed to support moving away from the existing threshold of 2,000 GJ:

4 1) FEI conducted the same analysis in terms of actual average load factor versus annual
 5 consumption of commercial customers (including RS 2 and RS 3/23 customers) in both
 6 the 2016 COSA study (Figure 8-10 of the 2016 COSA and RDA) and in this 2023 COSA
 7 study (Figure 5-5 of this Application). FEI has provided a copy of both figures in Figures 1
 8 and 2 below for comparison. While small variations between 2016 and 2023 are to be
 9 expected, there is no material change in terms of the general trend. The majority of
 10 commercial customers (including both RS 2 and RS 3/23) shown in the 2023 COSA that
 11 consume more than 2,000 GJ continue to have load factors at around 40 percent, similar
 12 to what was observed in 2016. Commercial customers that consume less than 2,000 GJ,
 13 while having a wider range, have load factors generally less than 40 percent in both the
 14 2016 and 2023 COSA studies. As such, FEI concluded there is no material change
 15 regarding the load factor of its commercial customers since 2016 that warrant a move
 16 away from the existing threshold of 2,000 GJ.

17 **Figure 1: RS 2 and RS 3/23 Load Factor vs. Annual Consumption in GJ (2016 COSA)**

1 **Figure 2: RS 2 and RS 3/23 Load Factor vs. Annual Consumption in GJ (2023 COSA)**

- 2
- 3 2) The current crossover point between RS 2 and RS 3/23 is 1,515 GJ, as shown in Table
- 4 5-1 of the Application. Based on 2022 actuals, there are a total of 2,734 RS 2 customers
- 5 that are above this crossover point and a total of 707 RS 3/23 customers below this
- 6 crossover point, which is approximately 3.6 percent of total RS 2 and RS 3/23 customers.
- 7 FEI does not consider the number of customers that currently fall between the current
- 8 financial crossover point of 1,515 GJ and the threshold of 2,000 GJ to be significant
- 9 enough to warrant a change from the existing crossover point of 2,000 GJ.
- 10 3) There is essentially no change from the 2023 COSA study even if FEI were to reassign
- 11 the revenue and costs of those RS 2 customers currently consuming above 1,515 GJ to
- 12 RS 3/23, and the revenue and costs of those RS 3/23 customers currently consuming
- 13 below 1,515 GJ to RS 2. Table 1 below provides the R:C and M:C ratios (before
- 14 rebalancing) with and without the reassignment. Even with the reassignment, the need to
- 15 rebalance RS 22 and RS 5/25 remains the same before the reassignment.

1
2

Table 1: R:C and M:C ratios (before Rebalancing) with and without RS 2 and RS 3/23 Reassignments

Rate Schedule	BCUC IR1 21.4 (RS 2 and RS 3/23)					
	As-Filed		Reassigned)		Change	
	Before Rebalancing		Before Rebalancing		Before Rebalancing	
	R:C	M:C	R:C	M:C	R:C	M:C
Rate Schedule 1 <i>Residential Service</i>	97.3%	95.0%	97.6%	95.4%	0.3%	0.4%
Rate Schedule 2 <i>Small Commercial Service</i>	98.0%	95.6%	97.0%	93.4%	-1.0%	-2.2%
Rate Schedule 3/23 <i>Large Commercial Sales and Transportation</i>	104.0%	111.2%	103.3%	108.9%	-0.7%	-2.3%
Rate Schedule 5/25 <i>General Firm Sales and Transportation</i>	106.9%	126.9%	106.9%	127.1%	0.0%	0.2%
Rate Schedule 6 <i>Natural Gas Vehicle Service</i>	96.2%	91.0%	96.5%	91.7%	0.3%	0.7%
Rate Schedule 22 <i>Large Volume Transportation Service</i>	110.0%	110.2%	110.3%	110.6%	0.3%	0.4%
Rate Schedule 22A <i>Transportation Service (Closed) Inland</i>	101.8%	101.9%	102.1%	102.2%	0.3%	0.3%
Rate Schedule 22B <i>Transportation Service (Closed) Columbia</i>	100.1%	100.1%	100.5%	100.5%	0.4%	0.4%

Rate Schedule (Rates Not Set Using Allocated Costs)	Before Rebalancing		Before Rebalancing		Before Rebalancing	
	R:C	M:C	R:C	M:C	R:C	M:C
Rate Schedule 4 <i>Seasonal Firm Gas Service</i>	124.1%	339.0%	124.2%	340.8%	124.2%	340.8%
Rate Schedule 7/27 <i>General Interruptible Sales and Transportation</i>	122.4%	629.0%	122.4%	630.6%	122.4%	630.6%

3

4

4) The separation of commercial customers between RS 2 and RS 3/23 started in the 1993 Phase B Rate Design, with the threshold between the two rate schedules set at 2,000 GJ. The following is copied from the 1993 Phase B Rate Design Application, Volume 1, Tab 7:

5

6

7

8

In this application, BC Gas is proposing to introduce three sales service to non-residential:

9

10

1) Small commercial service;

11

2) Large commercial service;

12

3) General Firm service.

13

The distinction between small and large commercial customers is drawn at consumption under and over at 2,000 gigajoules per year. The distinction is based on a number of factors with the most important being:

14

15

- 1 (a) The similarity of annual gas consumption profiles between the small
 2 commercial and residential customers.
- 3 (b) The similar load factors exhibited by the small commercial and residential
 4 customers; and
- 5 (c) Similarity in metering and pressure regulating equipment used by small
 6 commercial and residential customers.

7 FEI's view is that, specifically for item (c) above, one of the differentiating factors between
 8 Small and Large Commercial customers was the point at which the customer's metering
 9 equipment stopped having similar characteristics to Residential customers, with the
 10 assumption that Large Commercial customers would be typically using larger meter types.
 11 Table 2 below provides the data from the 2023 Customer Weighting Factor for Meters and
 12 Services (see Attachment 14.1A to BCUC IR1 14.1) which shows the number of 200, 400,
 13 and all other larger-sized meters as a percentage of the total number of meters for
 14 Residential, Small Commercial, and Large Commercial customers. It can be seen that
 15 approximately 99 percent of Large Commercial customers use larger meter types instead
 16 (not 200 and 400 series meters), whereas approximately 76 percent of Small Commercial
 17 customers use 200 and 400 series meters, with Residential customers almost exclusively
 18 using the 200 and 400 series meters. Based on this information, FEI concluded there is
 19 no significant change in the metering equipment used to serve Small Commercial
 20 customers that would precipitate a change to the segmentation threshold of 2,000 GJ.

21 **Table 2: Meter Types used for Residential, Small Commercial, and Large Commercial**
 22 **Customers (2023 COSA)**

Customer Classes	200 Meter Type	400 Meter Type	All Other Types
Residential RS 1			
No. of Meters	891,201	43,105	3,095
Total RS 1 Meters	937,401	937,401	937,401
% of Meter Type	95.1%	4.6%	0.3%
Small Commercial RS 2			
No. of Meters	48,413	23,511	23,089
Total RS 2 Meters	95,013	95,013	95,013
% of Meter Type	51.0%	24.7%	24.3%
Large Commercial RS 3			
No. of Meters	11	75	5,931
Total RS 3 Meters	6,017	6,017	6,017
% of Meter Type	0.2%	1.2%	98.6%

23 Based on the four factors discussed above, changing the current threshold of 2,000 GJ for
 24 segmenting RS 2 and RS 3/23 is not warranted.

1
2 On page 59 of the Application, FEI provides Table 5-2, which shows the economic
3 crossover volumes, before any revenue rebalancing, at varying load factors for RS 3/23
4 and RS 5/25 at the time of implementing the 2016 RDA Decision and at the current 2023
5 Approved rates, and states that “[i]f a customer’s volume for a given load factor is greater
6 than the economic crossover volume shown in the table below [Table 5-2], then the
7 customer would receive a lower annual bill under RS 5/25 than under RS 3/23.”

8 21.5 Before any revenue rebalancing, please confirm how many, if any, customers at
9 each given load factor have 2022 actual volume greater than the economic
10 crossover volume shown in Table 5-2 at the current 2023 approved rates.

11 **Response:**

12 Please refer to Table 1 below which provides the number of customers at each load factor (in the
13 same range as provided in Table 5-2 of the Application) that have 2022 actual volumes greater
14 than the economic crossover volume before any rebalancing at the current 2023 Approved rates.
15 Table 1 also provides the number of customers at each load factor that have 2022 actual volumes
16 greater than the economic crossover volume after rebalancing under Options 2a/2b, 3, 4, and 5.

17 **Table 1: Number of Customers Exceeding Economic Crossover Volume at a Given Load Factor**

Load Factor	2023 Approved Rates		Option 2a / 2b		Option 3		Option 4		Option 5	
	Economic Crossover (GJ)	Number of Customer Exceed	Economic Crossover (GJ)	Number of Customer Exceed	Economic Crossover (GJ)	Number of Customer Exceed	Economic Crossover (GJ)	Number of Customer Exceed	Economic Crossover (GJ)	Number of Customer Exceed

20
21
22 On pages 68 to 69 of the Application, regarding revenue rebalancing option 3, FEI states:
23
24 [...] as shown in Table 5-12 below, the adjusted rates ensure the economic
25 crossover point between RS 3/23 and RS 5/25 is maintained at a level similar to
26 the current 2023 Approved rates.

27 On page 69 of the Application, FEI provides Table 5-12.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 91

1 21.6 Please confirm how many, if any, customers at each given load factor have 2022
2 actual volume greater than the economic crossover volume shown in Table 5-12
3 under revenue rebalancing option 3.

4
5 **Response:**

6 Please refer to the response to BCUC IR1 21.5.

7
8

9
10 On page 72 of the Application, regarding revenue rebalancing option 4, FEI states:

11 [...] as shown in Table 5-16 below, the adjusted rates ensure the economic
12 crossover point between RS 3/23 and RS 5/25 is maintained at a level similar to
13 2023 Approved rates.

14 On page 74 of the Application, FEI provides Table 5-16.

15 21.7 Please confirm how many, if any, customers at each given load factor (except for
16 the 37 percent load factor which is explained in footnote 87 of the Application) have
17 2022 actual volume greater than the economic crossover volume shown in Table
18 5-16 under revenue rebalancing option 4.

19
20 **Response:**

21 Please refer to the response to BCUC IR1 21.5.

22
23

24
25 On page 77 of the Application, FEI states:

26 Based on actual 2022 annual consumption, FEI estimates that, under the rates for
27 Option 5, approximately 734 more RS 3/23 customers could receive a lower annual
28 bill with RS 5/25 [...]

29 On page 78 of the Application, FEI provides Table 5-20.

30 21.8 Please confirm how many customers at each given load factor have 2022 actual
31 volume greater than the economic crossover volume shown in Table 5-20 under
32 revenue rebalancing option 5.

33

17

On page 56 of the Application, FEI provides Figures 5-3 and 5-4 showing the load factors for RS 2 and RS 3/23 customers in 2022.

21.9 Please provide a table showing the annual bill impacts (in dollars and percentage) under revenue rebalancing option 5 and the number of customers at each load factor from 5 percent to 100 percent in intervals of 5 percent for an average customer in: (i) RS 2; and (ii) RS 3/23.

Response:

Please refer to Table 1 below for the annual bill impact (in dollars and in percentage) for RS 2 customers under FEI’s proposed Option 5, summarized by load factor from 5 percent to 100 percent. FEI notes that the annual bill impact is calculated based on the average volume of each interval (total volume in each interval divided by number of customers at each interval).

Table 1: Average RS 2 Bill Impact at Each Load Factor from 5% to 100% under Option 5

Load Factor	No. of Customer	Avg. Volume (GJ)	Option 5 - Bill Impact (\$)	Option 5 - Bill Impact (%)
5%	871	195	30	1.2%
10%	2	13	71	14.4%
15%	1,919	53	62	6.6%
20%	11,163	140	43	2.2%
25%	29,380	256	16	0.5%
30%	16,285	344	(3)	-0.1%
35%	7,245	497	(38)	-0.6%

1 **D. TRANSPORTATION SERVICE REPORT**

2 **22.0 Reference: BALANCING COSTS AND REVENUES**

3 **Exhibit B-1, Section 6.1, pp. 87–88; FEI Transportation Service**
 4 **Report Compliance Filing in Accordance with BCUC Order G-135-18**
 5 **and Order G-210-20 dated June 15, 2022 (Transportation Service**
 6 **Report), Table 5-3**

7 **Balancing Charges and Midstream Costs for Transportation Service**
 8 **Customers**

9 On page 87 of the Application, FEI states:

10 Although the balancing charges are not intended to be revenue generating or
 11 revenue neutral, as was presented in the Transportation Service Report (Section
 12 5.5 and Table 5-3), the balancing charge of \$0.25 per GJ when balancing in the
 13 10 percent to 20 percent tolerance range is currently at a level that is recovering
 14 revenue which is reasonably close to the incremental variable costs required to
 15 balance the system as a whole. Thus, in most cases, the costs of the incremental
 16 midstream resources needed to balance the system as a whole will be offset by
 17 the recoveries from the balancing charge.

18 On page 34 of FEI's Transportation Service Report, FEI provides Table 5-3.

19 22.1 Please provide an update to Table 5-3 from the Transportation Service Report
 20 showing incremental variable costs for system balancing during winter 2022/23.

21 **Response:**

22 The following table shows the incremental variable costs for system balancing for the winter of
 23 2022/23.
 24

	Sumas Price (CAD\$/GJ)	NWP Commodity Charge	NWP Fuel	Storage Fuel	Incremental Variable Costs (CAD\$/GJ)
2018/19	\$15.05	\$0.01	\$0.42	\$0.17	\$0.60
2019/20	\$3.25	\$0.01	\$0.07	\$0.04	\$0.12
2020/21	\$4.11	\$0.01	\$0.07	\$0.05	\$0.13
2021/22	\$5.76	\$0.01	\$0.10	\$0.07	\$0.18
2022/23	\$16.05	\$0.01	\$0.34	\$0.19	\$0.54
Winter Average (CAD\$/GJ)					\$0.31

25

26 Due to colder than normal temperatures and increased demand during the 2022/23 winter, Sumas
 27 prices were elevated and as shown, the average price over that period was \$16.05 CAD/GJ. The
 28 NWP and Storage fuel were also elevated as compared to previous winters due to colder
 29 temperatures and higher load factor. The incremental NWP Commodity Charge remained the

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 95

1 same over each winter. While the increase in the Sumas price and related fuel and charges
 2 resulted in a higher incremental variable cost during the 2022/23 winter of \$0.54 CAD/GJ, the
 3 average over the four winter periods is \$0.31 CAD/GJ, and the \$0.25 CAD/GJ variable charge
 4 remains reasonable to recover system balancing within the 10 – 20 percent range.

5 For additional evaluation to validate if the \$0.25 CAD/GJ charge is reasonably close to the
 6 incremental variable costs to balance the system as a whole, FEI calculated the incremental
 7 variable costs on an average annual basis. As the table shows, the average incremental variable
 8 cost from 2018 to September 2023 is \$0.26 CAD/GJ.

	Sumas Price (CAD\$/GJ)	NWP Commodity Charge	NWP Fuel	Storage Fuel	Incremental Variable Costs (CAD\$/GJ)
2018	\$4.34	\$0.01	\$0.10	\$0.11	\$0.22
2019	\$6.72	\$0.01	\$0.20	\$0.15	\$0.37
2020	\$2.69	\$0.01	\$0.05	\$0.06	\$0.12
2021	\$4.73	\$0.01	\$0.08	\$0.11	\$0.21
2022	\$10.09	\$0.01	\$0.20	\$0.24	\$0.46
2023 (Jan-Sep)	\$5.80	\$0.01	\$0.09	\$0.11	\$0.21
Average (CAD\$/GJ)					\$0.26

9
 10 The above annual analysis shows that the \$0.25 CAD/GJ reasonably recovers the incremental
 11 variable costs incurred by FEI to provide system balancing as a whole.

12
 13
 14
 15 22.2 Please discuss whether incremental variable costs for winter 2022/23 are
 16 consistent with FEI’s statement that, “the balancing charge of \$0.25 per GJ when
 17 balancing in the 10 percent to 20 percent tolerance range is currently at a level
 18 that is recovering revenue which is reasonably close to the incremental variable
 19 costs required to balance the system as a whole.”

20
 21 **Response:**

22 Please refer to the response to BCUC IR1 22.1.

23
 24
 25
 26 On page 85 of the Application, FEI states:

27 The fixed costs of FEI’s midstream resources are recovered from FEI’s core
 28 customers through the applicable Storage and Transport Charge per GJ applicable

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 96

1 to FEI's core sales service rate schedules. The Storage and Transport Charge is
2 not applicable to FEI's Transportation Service rate schedules and, as such,
3 Transportation Service customers do not pay for those midstream resources and
4 are not entitled to benefit from them at the expense of core customers.

5 On page 88 of the Application, FEI presents Table 6-1: Total Transportation Service
6 Balancing Charges vs. FEI's Total Midstream Costs (2018 to 2022 Actual) and states:

7 The five-year average of total balancing charges recovered from 2018 to 2022 was
8 approximately \$1.754 million, which is approximately 1.1 percent of FEI's average
9 total midstream costs per year over the same period, or approximately 0.08
10 percent of FEI's total allocated cost of service included in the 2023 COSA.

11 22.3 Please explain how the variance of daily demand needs from FEI core customers
12 compares to the variance of imbalances caused by transportation service
13 customers.
14

15 **Response:**

16 The variance in daily demand needs of FEI's core customers and transportation service
17 customers are relatively the same. Both FEI and Shipper Agents manage customers with similar
18 demand patterns and load requirements, including customers that are heat sensitive, seasonal,
19 or volatile throughout the year. FEI responds to the changes in daily demand requirements
20 through midstream resources under the Annual Contracting Plan; similarly, Shipper Agents
21 respond through their individual supply and market portfolios.

22
23

24

25 22.4 Please discuss whether it would be appropriate to allocate a portion of FEI's
26 midstream resource costs to transportation customers based on their annual
27 usage of midstream resources from 2018 to 2022.
28

29 **Response:**

30 FEI does not consider it appropriate to allocate a portion of FEI's midstream resource costs to
31 transportation customers and considers that doing so would be detrimental to incenting Shipper
32 Agents to balance their customer's supply and demand.

33 The option of a balancing fee was presented as an option in the stakeholder sessions in 2016 in
34 advance of the 2016 COSA and RDA to account for the use of Core customer midstream
35 resources by Transportation Service customers. In Exhibit B-4 of the 2022 Transportation Service
36 Report proceeding, FEI provided the response to CEC IR 3.4 explaining why it did not propose
37 allocating midstream costs to Transportation Service customers. FEI provides the excerpt below.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 97

3.4. Would there be any justification for having shipper agents pay a fee such that they would be paying their appropriate portion of the midstream resources? Please explain why or why not.

Response:

27
28
29
30
31
32
33
34

The option of a balancing fee was explored in the 2016 RDA³ to account for the use of core customer midstream resources by Transportation Service customers. In the 2016 RDA, FEI provided a summary of the replacement cost study, conducted by consultant Black & Veatch, of the market value of the balancing services provided by FEI.⁴ The replacement cost, as detailed in the 2016 RDA, Table 10-7, provided the total replacement cost of balancing services, at the time, by tolerance, and the resulting per GJ cost or fee that would apply to the throughput for all Transportation Service customers. For the following reasons which continue to remain valid, FEI did not propose a fee-based approach.

³ Section 10.7.5 Balancing Tolerance and Charges, Option 1 – Balancing Fee (service offering), page 10-33, 2016 RDA.
⁴ FEI 2016 RDA, Section 10.7.4.

- A charge applied to all throughput for all shipper agents would penalize the Transportation Service customers of shipper agents that are more proactively and closely managing balancing on FEI's system;
- A fee-based approach does not provide an incentive to balance more closely and effectively removes the obligation for shipper agents to manage matching supply and demand, which is a fundamental change to the Transportation Service Model and may result in unintended consequences for shipper agents, FEI and its core customers;
- Shipper agents raised concerns during the 2016 RDA workshops about the methodology and inputs to calculate the value of the balancing fees; and
- Shipper agents were of the view that applying a tighter tolerance would provide a better incentive to improve balancing behaviour versus applying a fee or charge.

In the 2016 RDA Decision, the Panel did not direct the imposition of a balancing fee or charge. Instead, the Panel stated:

The Panel finds the resulting tiered structure of the balancing charges to be just, reasonable and not unduly discriminatory in that this rate structure is consistent with rate design principles of fair apportionment of costs among customers and price signals that encourage efficient use of resources. ⁵

22.5 If FEI were to allocate a portion of FEI’s midstream resource costs to transportation customers based on their use of midstream resources, please discuss what the appropriate basis for cost allocation would be.

Response:

Please refer to the response to BCUC IR1 22.4 where FEI explains that it does not consider such an approach reasonable or appropriate.

To be clear, FEI does not hold/contract for midstream resources to serve Transportation Service (T-service) customers. FEI expects that T-service customers are already paying their gas marketer to bring gas to FEI’s interconnection points. If FEI were directed by the BCUC to allocate a portion of its midstream costs that are held/contracted for to serve Sales Service customers to T-service customers, FEI would need to re-evaluate the entire T-service model to determine what the services would be, whether midstream resources could in fact be acquired to serve them, and how the charges should be set.

In the Annual Contracting Plan, the midstream resources and associated costs are only for FEI’s core sales customers, and from a cost causation view, T-service customers do not cause the costs and would not be allocated any of the midstream costs. It is the responsibility of the Shipper Agents on behalf of their transportation customers to secure their own midstream resources to bring the gas to the FEI interconnect with Enbridge or Trans Canada. When system imbalances occur within the gas day that require FEI to take action and use core market midstream resources, FEI does not know if the imbalances are caused by transportation or core customers. Once the gas day is complete, the supply and demand records calculate imbalances by the Shipper Agents to determine if they have exceeded the balancing tolerance, and charges are applied back to the midstream costs.

Changing to having a midstream fee charged to all T-service customers would be a step away from cost causation / cost recovery principles. Not all Shipper Agents cause incremental midstream costs, nor should they be responsible for the incremental cost recovery. The existing framework of the Transportation Model incents customers through pricing for imbalances, and when marketer group(s) exceed the 10 percent tolerance limit, the marketer then bears the charges and has to deal with its customers that caused the charges from FEI.

22.5.1 Please provide a calculation illustrating how costs would be allocated to FEI’s transportation service customers on this basis, and explain how

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 99

1 costs allocated to transportation service customers would compare to
2 amounts recovered through balancing charges.

3
4 **Response:**

5 FEI is unable to provide the information requested in these IRs.

6 There is no rational basis for allocating FEI's midstream costs to T-service customers. FEI does
7 not acquire midstream resources through the Annual Contracting Plan for T-service customers.
8 Shipper Agents are responsible for acquiring their own midstream resources for their customers
9 in their groups to deliver the gas to the interconnect points to FEI's system. Imbalances do not
10 occur with T-service customers, imbalances occur with Shippers and their groups. FEI does not
11 have detailed information at the customer level or by transportation service rate schedule to
12 determine how much of the core market midstream resource is being used.

13 As explained in the response to BCUC IR1 22.4, FEI does not intend to apply a Midstream Fee
14 for balancing services and therefore has not undertaken a calculation to determine how this fee
15 or costs could be allocated across transportation service customers or how the costs would
16 compare to the amounts recovered through balancing charges. Further, and in the absence of a
17 rational basis for allocating midstream costs to T-service customers, FEI cannot comment on a
18 different rebalancing option and cannot provide the rate impact of making any adjustments.

19
20

21
22 22.5.2 Please explain how this cost allocation would impact the proposed
23 approvals sought and whether this would lead FEI to recommend a
24 different revenue rebalancing option.

25 22.5.2.1 Please provide the rate impact, if any, of making such
26 adjustments.

27
28 **Response:**

29 Please refer to the response to BCUC IR1 25.5.1.

30
31

32
33 22.6 If FEI were to recover a portion of midstream resource costs from transportation
34 customers, please discuss what the appropriate recovery mechanism would be.

35
36 **Response:**

37 Please refer to the responses to BCUC IR1 22.4 and 22.5.

FortisBC Energy Inc. (FEI or the Company) 2023 Cost of Service Allocation (COSA) Study and Application for Approval of Revenue Rebalancing (Application)	Submission Date: November 23, 2023
Response to the British Columbia Utilities Commission (BCUC) Information Request (IR) No. 1	Page 100

On page 88 of the Application, FEI states:

Given the relatively small amount of revenue related to the balancing of FEI's Transportation

Service Model when compared to FEI's total allocated cost of service, Table 6-2 below confirms that there is no material change to the R:C or M:C ratios even if FEI were to include the balancing revenues in the 2023 COSA model. As such, the balancing revenues will have no material impact to the allocation of costs between each rate schedule or change the results of the 2023 COSA.

22.7 Please provide the impact on the R:C or M:C ratios if FEI allocated midstream costs to transportation customers based on their usage of midstream resources in the 2023 COSA model.

Response:

Please refer to the responses to BCUC IR1 22.4 and 22.5.
